The exhibits show a FortiGate network topology and the output of the status of high availability on the FortiGate. Given this information, which statement is correct?

- A. The cluster members are on the same network and the IP addresses were statically assigned.
- B. The cluster mode can support a maximum of four (4) FortiGate VMs

- C. FGVMEVLQOG33WM3D and FGVMEVGCJNHFYI4A share a virtual MAC address.
- D. The ethertype values of the HA packets are 0x8890, 0x8891, and 0x8892

Answer: A

Explanation:

The output of the status of high availability on the FortiGate shows that the cluster mode is active-passive, which means that only one FortiGate unit is active at a time, while the other unit is in standby mode. The active unit handles all traffic and also sends HA heartbeat packets to monitor the standby unit. The standby unit becomes active if it stops receiving heartbeat packets from the active unit, or if it receives a higher priority from another cluster unit. In active-passive mode, all cluster units share a virtual MAC address for each interface, which is used as the source MAC address for all packets forwarded by the cluster. References:

NEW QUESTION # 76

Refer to the exhibit showing the history logs from a FortiMail device.

#	Classifier	Disposition	From	Header From	To	Subject	Directi...	Policy ID	Domain

Which FortiMail email security feature can an administrator enable to treat these emails as spam?

- A. Impersonation analysis in an antispam profile
- B. Sender domain validation in a session profile
- C. DKIM validation in a session profile
- D. Soft fail SPF validation in an antispam profile

Answer: A

Explanation:

Impersonation analysis is a feature that detects emails that attempt to impersonate a trusted sender, such as a company executive or a well-known brand, by using spoofed or look-alike email addresses. This feature can help prevent phishing and business email compromise (BEC) attacks. Impersonation analysis can be enabled in an antispam profile and applied to a firewall policy.

NEW QUESTION # 77

Refer to the exhibit.

You are managing a FortiSwitch 3032E that is managed by FortiLink on a FortiGate 3960E. The 3032E is heavily utilized and there is only one port free.

The requirement is to add an additional three FortiSwitch 448E devices with 10Gbps SFP+ connectivity directly to the 3032E. The plan is to use split port (phy-mode) with QSFP28 mode to connect the new 448E switches. In this scenario, which statement about the switch deployment is correct?

- A. Switches 2-4 will connect successfully with Switch 1 split port in QSFP28 mode.
- B. After enabling split ports and rebooting Switch 1, the new ports can be configured from the FortiGate.
- **C. The port most of Switch 1 must be changed to QSFP.**
- D. Additional ports on Switch 1 can be split for a maximum of 128 interfaces.

Answer: C
