

C-DBADM-2601 Latest Dumps Files | C-DBADM-2601 Mock Exams

Our C-DBADM-2601 exam questions are related to test standards and are made in the form of actual tests. Whether you are newbie or experienced exam candidates, our C-DBADM-2601 study guide will relieve you of tremendous pressure and help you conquer the difficulties with efficiency. If you study with our C-DBADM-2601 Practice Engine for 20 to 30 hours, we can claim that you can pass the exam as easy as a pie. Why not have a try?

We have to admit that the exam of gaining the C-DBADM-2601 certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the C-DBADM-2601 certification is a good choice for you. Now it is time for you to take an exam for getting the certification. If you have any worry about the C-DBADM-2601 Exam, do not worry, we are glad to help you. Because the C-DBADM-2601 study materials from our company are very useful for you to pass the exam and get the certification.

100% Pass 2026 C-DBADM-2601: SAP Certified - Database Administrator - SAP HANA –Professional Latest Dumps Files

Our SAP C-DBADM-2601 web-based practice exam software also simulates the SAP Certified - Database Administrator - SAP HANA (C-DBADM-2601) environment. These SAP C-DBADM-2601 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. DumpsFree web-based C-DBADM-2601 Practice Exam software is usable only with a good internet connection. You can use this SAP C-DBADM-2601 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.

SAP Certified - Database Administrator - SAP HANA Sample Questions

(Q178-Q183):

NEW QUESTION # 178

CHALLENGE 4 - Receipt-to-Invoice Continuity During Transition Weekend

During overlap-period rehearsal, one plant shows clean invoice continuity for goods received near the transition weekend, while another plant shows less stable invoice results for comparable procurement cases. Reviewers find that the weaker cases were prepared under different upstream source, purchasing, and receipt assumptions. What is the best next action?

- A. Ignore plant differences and validate only the aggregate invoice completion count for the weekend
- B. Increase invoice-processing speed targets so both plants complete more transactions before comparison
- C. Move all overlap-period invoice handling to local finance teams so cases can be resolved faster
- D. Align upstream sequence assumptions and repeat receipt-to-invoice rehearsal for representative overlap-period cases

Answer: D

Explanation:

Feedback:

The scenario identifies invoice instability as a downstream effect of earlier sequence differences. Repeating representative cases after aligning source, purchasing, and receipt assumptions addresses the second-order dependency and tests whether continuity is truly stable.

NEW QUESTION # 179

A retail planning team is preparing to shift one reporting workload from an on-premises SAP HANA database to SAP HANA Cloud, while keeping transactional processing on-premises for the current phase. The technical migration path is considered feasible, but the administration team is concerned that daily operational checks, backup assumptions, and monitoring responsibilities may be split incorrectly across the two environments if the transition is rushed.

Management wants a first step that supports phased modernization without forcing an immediate redesign of the full landscape. The decision must reduce transition risk and preserve clear operational ownership across the mixed environment.

Which approach is best for this phase?

- A. Keep all workloads on-premises and focus only on increasing monitoring frequency to reduce modernization risk.
- B. Move the reporting workload in phases and define environment-specific operational checks and responsibilities before productive use in the target landscape.
- C. Delay the reporting move until both transactional and reporting workloads can be migrated together in one cutover.
- D. Move the reporting workload now, but continue using the same undifferentiated operational runbook for both environments until stabilization is complete.

Answer: B

Explanation:

Feedback:

This drill addresses modernization pressure. A phased move is allowed by the mixed deployment model, but the real risk is operational ambiguity between on-premises and cloud responsibilities. The best answer supports incremental modernization while separating environment-specific checks, monitoring, and ownership before productive use. That reduces transition risk without demanding full redesign.

NEW QUESTION # 180

CHALLENGE 1 - First Close Configuration Traceability

The close coordinator wants to compare runtime between the newly installed validation database and the upgraded claims reporting system. The installed database record is complete, but the upgraded system record is missing a configuration value used during rehearsal. Which action best supports a defensible comparison?

- A. Update the upgraded system's administration record before using the runtime comparison.
- B. Replace the upgraded system record with the installed database record for consistency.
- C. Exclude the installed database because only the upgraded system supports close reporting.
- D. Compare the runtimes as-is because both databases returned report outputs.

Answer: A

Explanation:

Feedback:

The upgraded system's administration record should be updated before runtime comparison is used. The comparison is defensible only when both systems are evaluated against documented database states.

NEW QUESTION # 181

A regional telecom support center performs a planned parameter adjustment for SAP HANA administration. After the change, SAP HANA starts normally and the database remains available. However, an administrator reviewing active settings notices that the parameter appears in the persisted configuration record but is not reflected in the active runtime state used by current sessions. Routine application checks still succeed, so the service desk wants to close the activity.

The constraint is that the administrator must prove that the approved configuration is active, not only stored. The environment must remain available, and any follow-up action must target the configuration activation gap rather than unrelated application behavior.

Which action best resolves the configuration validation issue?

- A. Change the persisted configuration record back to the old value because the runtime state already reflects stable operation.
- **B. Validate the activation requirement for the changed parameter, apply the required activation step, and recheck the active runtime state.**
- C. Run a backup immediately and use successful backup completion as evidence that the configuration is valid.
- D. Close the activity because successful routine checks prove that the configuration change is operationally harmless.

Answer: B

Explanation:

Feedback:

This targets the configuration activation layer where the mismatch exists. Confirming the activation requirement, completing it, and rechecking runtime state proves that persisted configuration and active database behavior are aligned.

NEW QUESTION # 182

CHALLENGE 1 - Cutover Configuration Evidence Traceability

The upgraded reporting system and the installed validation database both pass connection checks. The upgraded system's configuration value exists in monitoring notes, while the validation database value exists in the administration record. Which validation sequence is most appropriate?

- A. Use the SAP HANA Cloud sample dataset as the comparison reference for both systems.
- B. Accept connection checks, then update configuration records after cutover approval.
- **C. Confirm active states, reconcile administration records, then accept comparison evidence.**
- D. Apply the validation database value to the upgraded system before reviewing existing evidence.

Answer: C

Explanation:

Feedback:

The correct sequence is to confirm active states, reconcile records, and then accept comparison evidence. This keeps the cutover result tied to documented SAP HANA database states.

NEW QUESTION # 183

.....

Why we let you try our C-DBADM-2601 exam software free demo before you purchase? Why we can give you a promise that we will fully refund the money you purchased our software if you fail C-DBADM-2601 Exam with our dump? Because we believe that our products can make you success. As the C-DBADM-2601 exam continues to update, our software will be always updating with it.
