As a powerful tool for a lot of workers to walk forward a higher self-improvement, our FCP_FAZ_AN-7.6 certification training continued to pursue our passion for advanced performance and human-centric technology. Only 20-30 hours are needed for you to learn and prepare our FCP_FAZ_AN-7.6 test questions for the exam and you will save your time and energy. No matter you are the students or the in-service staff you are busy in your school learning, your jobs or other important things and can’t spare much time to learn. But you buy our FCP_FAZ_AN-7.6 Exam Materials you will save your time and energy and focus your attention mainly on your most important thing. You only need several hours to learn and prepare for the exam every day.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q57-Q62):

NEW QUESTION # 57
Which two statement regarding the outbreak detection service are true? (Choose two.)

- A. It automatically downloads new event handlers and reports.
- B. An additional license is required.
- C. Outbreak alerts are available on the root ADOM only.
- D. New alerts are received by email.

Answer: A,C

NEW QUESTION # 58
As part of your analysis, you discover that an incident is a false positive.
You change the incident status to Closed: False Positive.
Which statement about your update is true?

- A. The audit history log will be updated.
- B. The incident will be deleted.
- C. The corresponding event will be marked as mitigated.
- D. The incident number will be changed

Answer: A

Explanation:
When an incident in FortiAnalyzer is identified as a false positive and its status is updated to "Closed: False Positive," certain records and logs are updated to reflect this change.
* Option A - The Audit History Log Will Be Updated:
* FortiAnalyzer maintains an audit history log that records changes to incidents, including updates to their status. When an incident status is marked as "Closed: False Positive," this action is logged in the audit history to ensure traceability of changes. This log provides accountability and a record of how incidents have been handled over time.
* Conclusion: Correct.
* Option B - The Corresponding Event Will Be Marked as Mitigated:
* Changing an incident to "Closed: False Positive" does not affect the status of the original event itself. Marking an incident as a false positive signifies that it does not represent a real threat, but it does not imply that the event has been mitigated.
* Conclusion: Incorrect.
* Option C - The Incident Will Be Deleted:
* Marking an incident as "Closed: False Positive" does not delete the incident from FortiAnalyzer.
Instead, it updates the status to reflect that it is not a real threat, allowing for historical analysis and preventing similar false positives in the future. Deletion would typically only occur manually or by a different administrative action.
* Conclusion: Incorrect.
* Option D - The Incident Number Will Be Changed:
* The incident number is a unique identifier and does not change when the status of the incident is updated. This identifier remains constant throughout the incident's lifecycle for tracking and reference purposes.
* Conclusion: Incorrect.
Conclusion:
* Correct Answer: A. The audit history log will be updated.
* This is the most accurate answer, as the update to "Closed: False Positive" is recorded in FortiAnalyzer' s audit history log for accountability and tracking purposes.

FortiAnalyzer 7.4.1 documentation on incident management and audit history logging.

NEW QUESTION # 59
Which two statements about playbook execution are true? (Choose two)

- A. You can <un the default debugging playbook to investigate playbook errors.
- B. The Playbook Monitor provides troubleshooting logs
- C. Even I the playbook status is Failed, individual tasks may have succeeded.
- D. FortiAnalyzer will not commit changes made by a Failed playbook

Answer: B,D

NEW QUESTION # 60
Which log will generate an event with the status Unhandled?

- A. An AppControl log with action=blocked.
- B. A WebFilter log will action=dropped.
- C. An IPS log with action=pass.
- D. An AV log with action=quarantine.

Answer: C

Explanation:
In FortiOS 7.4.1 and FortiAnalyzer 7.4.1, the "Unhandled" status in logs typically signifies that the FortiGate encountered a security event but did not take any specific action to block or alter it. This usually occurs in the context of Intrusion Prevention System (IPS) logs. IPS logs with action=pass: When the IPS engine inspects traffic and determines that it does not match any known attack signatures or violate any configured policies, it assigns the action "pass". Since no action is taken to block or modify this traffic, the status is logged as "Unhandled."

NEW QUESTION # 61
Which statement about sending notifications with incident update is true?

- A. You can send notifications to multiple external platforms.
- B. If you use multiple fabric connectors, all connectors must have the same settings.
- C. Notifications can be sent only when an incident is updated or deleted.
- D. Notifications can be sent only by email.

Answer: A

Explanation:
In FortiOS and FortiAnalyzer, incident notifications can be sent to multiple external platforms, not limited to a single method such as email. Fortinet's security fabric and integration capabilities allow notifications to be sent through various fabric connectors and third-party integrations. This flexibility is designed to ensure that incident updates reach relevant personnel or systems using preferred communication channels, such as email, Syslog, SNMP, or integration with SIEM platforms.
Let's review each answer option for clarity:
* Option A: You can send notifications to multiple external platforms
* This is correct. Fortinet's notification system is capable of sending updates to multiple platforms, thanks to its support for fabric connectors and external integrations. This includes options such as email, Syslog, SNMP, and others based on configured connectors.
* Option B: Notifications can be sent only by email
* This is incorrect. Although email is a common method, FortiOS and FortiAnalyzer support multiple notification methods through various connectors, allowing notifications to be directed to different platforms as per the organization's setup.
* Option C: If you use multiple fabric connectors, all connectors must have the same settings
* This is incorrect. Each fabric connector can have its unique configuration, allowing different connectors to be tailored for specific notification and integration requirements.
* Option D: Notifications can be sent only when an incident is updated or deleted
* This is incorrect. Notifications can be sent upon the creation of incidents, as well as upon updates or deletion, depending on the configuration.
* According to FortiOS and FortiAnalyzer 7.4.1 documentation, notifications for incidents can be configured across various platforms by using multiple connectors, and they are not limited to email alone. This capability is part of the Fortinet Security Fabric, allowing for a broad range of integrations with external systems and platforms for effective incident response.

NEW QUESTION # 62
......

These FCP - FortiAnalyzer 7.6 Analyst (FCP_FAZ_AN-7.6) exam questions are a one-time investment to clear the FCP_FAZ_AN-7.6 test in a short time.
