Practice ACA-100 Tests | ACA-100 Certification Sample Questions

Nowadays in this information-based world the definition of the talents has changed a lot and the talents mean that the personnel boost both the knowledge in ACA-100 area and the practical abilities now. With our ACA-100 exam braindumps, you can get what you want. Our ACA-100 Study Materials are easy to be mastered and boost varied functions. We compile Our ACA-100 preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the exam.

Appian Certified Analyst Sample Questions (Q20-Q25):

NEW QUESTION # 20

When creating a user story, which of the following is essential to ensure clarity and completeness?

- A. Development timeline
- B. List of potential risks
- C. Detailed UI mockups
- D. Acceptance criteria

Answer: D

NEW QUESTION # 21

Which is an accurate statement about application security?

- A. Developers require an account in Appian, while any users can access an Appian application without an account.
- B. Every user must have an account created in Appian in order to develop, administer, and/or access an Appian application.
- C. Any user can develop and access an Appian application without an account. However, deployments cannot be done without an account.
- D. Admins require an account in Appian to use the Admin Console, while all other basic user actions can be done without an

account.

Answer: B

Explanation:

In Appian, every user who needs to interact with the platform, whether for development, administration, or accessing applications, must have an account. This is a fundamental security measure to ensure that only authorized users can interact with the system.

Appian Security Overview:

Each user account in Appian has specific permissions based on roles, ensuring that users can only access what they are authorized to.

This applies to all levels of interaction, from basic users to administrators and developers.

Why Not Other Options?:

A . Incorrect, as even basic users require accounts to access applications.

C and D . Incorrect, as they suggest that certain actions can be performed without an account, which is not the case.

References:

Appian Security Guide: User Management and Security

Ensuring that all users have accounts is a critical aspect of maintaining security and control within the Appian environment.

NEW QUESTION # 22

What are the two best uses for a "Staging" or "Parallel to Prod" environment (separate from Dev, Test, and Prod environments)?

- A. Practicing complex production deployments
- B. Sprint acceptance testing
- C. Testing a new release for compatibility with existing Production code/settings
- D. Unit testing development stories

Answer: A,C

Explanation:

A "Staging" or "Parallel to Prod" environment is a crucial part of the software deployment lifecycle. It is used to mirror the Production environment as closely as possible, allowing teams to test new releases and practice deployments without affecting live users.

Testing Compatibility (B):

Staging is the ideal environment to ensure that new code releases are compatible with the existing production settings and configurations.

This helps in identifying any potential issues that could disrupt the live environment before the actual deployment.

Practicing Deployments (C):

Staging is also used to rehearse complex production deployments. This practice helps ensure that the deployment process is smooth and that all steps are properly executed without errors.

It reduces the risk of downtime or issues during the actual production deployment.

Why Not Other Options?:

A . Unit Testing Development Stories: Unit testing is typically done in the Dev or Test environments, not in Staging.

D . Sprint Acceptance Testing: This testing is generally conducted in the Test environment as part of the sprint cycle, not in Staging.

Appian Environment Management Guide: Best Practices for Staging Environments Using the Staging environment for compatibility testing and deployment practice ensures a smoother and more reliable transition to Production.

NEW QUESTION # 23

Which BPMN notation type is used to reflect the roles and associated activities within a Process Model diagram?

- A. Swimlane
- B. Task
- C. Sub-Process
- D. Sequence Flow

Answer: A

Explanation:

In BPMN (Business Process Model and Notation), a swimlane is used to represent roles and their associated activities within a

process model diagram. Each swimlane represents a different role or department, and the tasks or activities performed by that role are placed within the corresponding swimlane. This visual distinction helps in understanding who is responsible for which parts of the process.

Swimlane Overview:

Swimlanes are horizontal or vertical sections within a process model diagram.

Each lane is labeled with the name of the role, department, or entity that is responsible for the activities within that lane.

The activities (tasks, events, gateways) are placed within the appropriate swimlane to show which role is performing each action.

Why Not Other Options?:

A . Task: Represents a single unit of work or activity but does not indicate the role responsible for it.

C . Sequence Flow: Represents the order of activities but does not relate to roles or responsibilities.

D . Sub-Process: Represents a group of related tasks but, again, does not indicate which role is responsible for the activities.

References:

Appian Documentation on Process Modeling: Process Models

Swimlanes are essential for clarifying responsibilities in a process, making it easier for stakeholders to understand and manage the process.

NEW QUESTION # 24

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Scrum Master
- B. Appian Analyst
- **C. Product Owner**
- D. Sponsor

Answer: C

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

References:

Appian Community Success Guide: Roles in Agile Teams

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.
