Don't miss this opportunity of buying an updated and affordable GitHub Administration (GH-100) exam product.

Microsoft GitHub Administration Sample Questions (Q13-Q18):

NEW QUESTION # 13
Which of the following are valid ways to pass data to a reusable workflow in a separate repository?

- A. Define inputs in the reusable workflow and pass values from the calling workflow.
- B. Use environment variables to pass data directly to the reusable workflow.
- C. Define the secrets in the reusable workflow's repository and reference the secret using the 'secrets' context.
- D. Define the secrets in the caller repository and call the reusable workflow using the 'secrets' keyword.

Answer: A,D

Explanation:
You declare named inputs in the reusable workflow's on.workflow_call block and then pass values from the caller using

thewithkeyword, allowing the called workflow to consume those parameters.
You define required secrets in the caller repository and supply them to the reusable workflow via thesecretskeyword in the workflow-call step, ensuring sensitive values are securely passed.

NEW QUESTION # 14
Which Git operation is not included in the Git activity audit log?

- A. Clone
- B. Delete branch
- C. Fetch
- D. Push

Answer: B

Explanation:
Delete branch operations aren't tracked as Git-activity events; the Git activity audit log only records Git events such as clone, fetch (pull), and push.

NEW QUESTION # 15
Which practice helps avoid service disruption when consuming GitHub APIs at scale?

- A. Caching all API responses permanently
- B. Designing your application to work within GitHub's rate limits
- C. Ignoring secondary rate limits
- D. Using multiple tokens to bypass limits

Answer: B

Explanation:
Designing your integration to stay within GitHub's documented rate limits-by batching requests, using conditional requests, handling 429 responses with back-off, and monitoring the X-RateLimit-* headers - ensures you won't be temporarily throttled or cut off when you hit secondary limits.

NEW QUESTION # 16
Why would a GitHub App be favored over a machine account for automation tasks?

- A. Machine accounts are required for webhook delivery.
- B. GitHub Apps provide a higher rate limit ceiling than using a personal access token on a machine account, when they use an install token and are owned by a GitHub Enterprise Cloud licensed enterprise.
- C. GitHub Apps are limited to a single repository.
- D. Machine accounts are easier to audit than GitHub Apps.

Answer: B

Explanation:
GitHub Apps authenticate with short-lived installation tokens scoped to fine-grained permissions and, when owned by a GitHub Enterprise Cloud organization, enjoy a higher rate limit (15,000 requests/hour) compared to a machine account's personal access token.

NEW QUESTION # 17
A team member is unable to push to a repository due to a 403-error related to branch protection. What should the GitHub Enterprise administrator do first?

- A. Revert the branch to an earlier state
- B. Remove the user from the team and re-add them
- C. Check the user's permissions and rulesets applied to the branch

- D. Raise a GitHub Support request for permissions issues

Answer: C

Explanation:
The administrator should first review the user's repository role and the branch protection rules applied to that branch. A 403 error on push almost always indicates that the user either lacks the necessary write permissions or is not listed among the actors authorized by the branch protection settings.

NEW QUESTION # 18

......

All these three GitHub Administration (GH-100) exam questions formats contain the actual, updated, and error-free GitHub Administration (GH-100) exam practice test questions that assist you in GitHub Administration (GH-100) exam preparation. Finally, With the Microsoft GH-100 Exam Questions you will be ready to get success in the final Microsoft GH-100 certification exam. Please choose the best GitHub Administration (GH-100) exam questions format and download it quickly and start this journey today.
