Certification 350-501 Sample Questions, 350-501 Sure Pass

It is browser-based; therefore no need to install it, and you can start practicing for the Implementing and Operating Cisco Service Provider Network Core Technologies (350-501) exam by creating the Cisco 350-501 practice test. You don't need to install any separate software or plugin to use it on your system to practice for your actual Implementing and Operating Cisco Service Provider Network Core Technologies (350-501) exam. PassSureExam Implementing and Operating Cisco Service Provider Network Core Technologies (350-501) web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.

Cisco 350-501 exam is an essential certification for professionals looking to demonstrate their expertise in service provider networking and advance their careers in this field. Implementing and Operating Cisco Service Provider Network Core Technologies certification is recognized worldwide and is highly valued by employers in the networking industry. Implementing and Operating Cisco Service Provider Network Core Technologies certification also provides a pathway to higher-level certifications, such as the CCIE Service Provider certification.

Preparation Materials for the Cisco 350-501 Exam

While the exam's blueprint gives a point of departure for the candidates, they should also use verified materials covered all the test objectives to consolidate their knowledge. These can be preparatory courses as well as books and study guides.

Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) v1.0 is an official training class developed by the vendor for the candidates who want to strengthen their knowledge of the Cisco Service Provider technologies. More to the point, this course can be delivered in different formats. Those who prefer an interactive type of training can attend instructor-led sessions that last for 5 days. They are being delivered in a classroom format and offer exam-takers the opportunity to receive a lot of hands-on laboratory practice. Therefore, they will discover how the theoretical concepts and information can be applied in a real-world environment. Moreover, they will be given extra resources for three more days for individual studying.

The second delivery option is virtual training that is also guided by expert instructors. This one is very similar to the first type, with the only exception that it is being delivered in a digital format. Its duration is of 5 days as well and it also includes a lot of hands-on practice. Also, this course has 3 more days dedicated to the unsupervised study, which the candidates can use to consolidate their knowledge and check whether they are prepared to take the real exam.

Finally, the third format is the e-learning type of self-paced classes where students receive access to videos, challenges, and practice equivalent to 8-day continuous studying. Either way, as a result, you will gain knowledge on troubleshooting, verifying, configuring, and optimizing the IP network infrastructures of Service Provider. Besides, every candidate will acquire a solid understanding of how to work with the Service Provider technologies. Therefore, he or she will know how to use the core architecture, networking, automation, service, network assurance, or QoS, and can demonstrate these skills on the final 350-501 test.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q488-Q493):

NEW QUESTION # 488

Refer to the exhibit.

While troubleshooting the OSPF adjacency between routers R1 and R2 an engineer noticed that both routers are stuck in the EXCHANGE/EXSTART state. What should the engineer fix to solve the ongoing issue?

- A. match IPv4 addresses
- B. match OSPF areas
- **C. match MTU values**
- D. match OSPF network types

Answer: C

NEW QUESTION # 489

Refer to the exhibit.

What does the number 2 mean in the configuration?

- **A. It is the numeric name of the ACL that contains the list of SNMP managers with access to the agent.**
- B. It dictates the number of sessions that will be open with the SNMP manager
- C. It indicates two SNMP managers are able to read and write with the agent using community string ciscotest.
- D. It represents the version of SNMP running.

Answer: A

NEW QUESTION # 490

Drag and drop the OSs from the left onto the correct descriptions on the right.

Answer:

Explanation:

□

NEW QUESTION # 491

After you analyze your network environment, you decide to implement a full separation model for Internet access and MPLS

L3VPN services For which reason do you make this decision?

- A. It enables EGP and IGP to operate independently
- B. It requires only one edge router
- C. It enables you to choose whether to separate or centralize each individual service.
- D. It is easier to manage a system in which services are mixed

Answer: A

Explanation:

The full separation model for Internet access and MPLS L3VPN services is chosen to enable EGP (Exterior Gateway Protocol) and IGP (Interior Gateway Protocol) to operate independently. In this model, the internet access and MPLS L3VPN services are fully separated, ensuring that the two networks do not interfere with each other's operation. This separation enhances network security, performance, and manageability. References: Implementing and Operating Cisco Service Provider Network Core Technologies source documents or study guide

NEW QUESTION # 492

What is a characteristic of prefix segment identifier?

- A. It is locally unique.
- B. It contains a router to a neighbor
- C. It is globally unique.
- D. It contains the interface address of the device per each link

Answer: A

Explanation:

A prefix segment identifier (PSID) is a unique identifier used in Segment Routing (SR) networks. It is locally significant within a specific SR domain. Each PSID corresponds to a specific segment (such as a node or an adjacency) in the SR domain. PSIDs are used to create segment lists that define the path a packet should follow through the network. Unlike globally unique identifiers, PSIDs are only meaningful within the context of a single SR domain.
