### VMware Cloud Foundation 9.0 Administrator Sample Questions (Q68-Q73):

#### NEW QUESTION # 68

Which IT standards or best practices often intersect with VMware security and operations?

- A. NIST guidelines for secure configurations
- B. COBIT for governance and management
- C. SNMP for live VM migration
- D. ISO 27001 for information security management

**Answer: A,B,D**

Explanation:

NIST, COBIT, and ISO 27001 are commonly applied standards in virtualized environments. SNMP (Simple Network Management Protocol) is a protocol used for network management/monitoring, not specifically for live VM migration.

#### NEW QUESTION # 69

What are two benefits of enabling workload Management on a vSphere Cluster within a VI Workload Domain using SDDC Manager? (Choose two.)

- A. It enhances the security of the vSphere cluster.
- B. It integrates the vSphere supervisor with NSX Networking.
- C. It allows the deployment of traditional VMs with enhanced performance.
- D. It integrates vSphere with third-party cloud providers.
- E. It enables the use of Kubernetes for container orchestration on the vSphere cluster.

**Answer: B,E**

Explanation:

Workload Management integrates the vSphere Supervisor with NSX networking to provide Kubernetes control plane connectivity. It enables Kubernetes-based container orchestration directly on the vSphere cluster via the Supervisor control plane.

#### NEW QUESTION # 70

Which three statements are characteristics of a VMware Cloud Foundation (VCF) private cloud? (Choose three.)

- A. VCF supports the provisioning of both VMs and containers.
- B. VCF supports only the industry and regulatory compliance offered by the cloud service provider.
- C. VCF offers the ability to configure full isolation of organizations in the private cloud.
- D. VCF offers manual scalability of the environment through configurations or custom scripts.

- E. VCF offers automation of operations and the ability to optimize network services.
- F. VCF supports only vSAN storage technology.

**Answer: A,C,E**

Explanation:

VCF is a "full-stack IaaS" with "automation and orchestration to simplify Day 0, Day 1, and Day 2 tasks." VCF supports modern apps: users can provision "VMs" and "Kubernetes workloads" from self-service services, providing both VM and container support. Multi-tenancy with strong isolation is native: Organizations are "secure and isolated" boundaries; All Apps organizations run "virtual machines (VMs), Kubernetes... multiple tenants with secure infrastructure isolation."

#### NEW QUESTION # 71

An administrator is tasked with deploying several VMware ESX hosts in a new VMware environment. The administrator wants to understand the general flow of a manual ESX installation and setup process in VMware Cloud Foundation (VCF).

What are the stages of the ESX deployment process?

- A. 1. Boot from installation media  
2. Select target disk  
3. Configure management network  
4. Set root password
- B. 1. Install ESX using VCF Installer  
2. Configure host settings  
3. Perform hardware compatibility check  
4. Create datastores
- C. 1. Hardware validation  
2. Network configuration  
3. ESX installation  
4. Join vCenter
- D. 1. Install vCenter Server  
2. Configure cluster settings  
3. Deploy ESX using VCF Installer  
4. Create virtual machines

**Answer: A**

Explanation:

The manual ESXi installation process in VMware Cloud Foundation (before commissioning hosts into VCF) follows the standard VMware ESXi setup workflow: boot from the installation ISO, select the installation disk, configure the management network, and set the root password. This prepares the host for later commissioning into VCF.

#### NEW QUESTION # 72

When creating a new distributed port group, which of the following port binding or policy configurations are possible in vSphere?

- A. Static binding for VM network adapters
- B. Port-level VLAN settings to isolate traffic
- C. Ephemeral binding for short-lived or temporary VMs
- D. Host-only binding to bypass vCenter management

**Answer: A,B,C**

Explanation:

Distributed port groups can be set to static or ephemeral binding (A, B), and each port group can define VLAN tagging or trunking at the port level (D). "Host-only binding" (C) is not a standard vSphere feature.
