## C-SEC-2405 VCE Dumps Pass Certify| High-quality New C-SEC-2405 Exam Discount: SAP Certified Associate - Security Administrator

There are so many benefits when you get qualified by the C-SEC-2405 certification. Expand your knowledge and your potential earning power to command a higher salary by earning the C-SEC-2405 best study material. Now, let's prepare for the exam test with the C-SEC-2405 training pdf offered by ValidTorrent. C-SEC-2405 Online Test engine is selected by many candidates because of its intelligence and interactive features. You can use the C-SEC-2405 online test off-line, while you should run it in the network environment.

### SAP Certified Associate - Security Administrator Sample Questions (Q39-Q44):

#### NEW QUESTION # 39

Which limitations apply to restricted users in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. They cannot create objects in the database.
- B. They can only connect to the database using HTTP/HTTPS.
- C. They can only create objects in their own database schema.
- D. They cannot connect via ODBC or JDBC.
- E. They only have full SQL access via the SQL console.

**Answer: A,B,C**

Explanation:

Restricted users in SAP HANA Cloud face several limitations to ensure secure and controlled access:

- \* Schema Restriction (A): Restricted users are limited to creating objects within their own schema.
- \* HTTP/HTTPS Connection (B): These users are restricted to connecting through HTTP/HTTPS protocols for enhanced security.
- \* Object Creation Restriction (E): Restricted users do not have permissions to create database objects in general.

SAP Security References:

- \* SAP HANA Cloud User Management Guide
- \* SAP Note on Restricted User Privileges

#### NEW QUESTION # 40

Which object type is assigned to activated OData services in transaction SU24?

- A. G4BA
- B. IWSG
- C. HTTP
- D. IWSV

**Answer: D**

#### NEW QUESTION # 41

An authorization based on what object is required for trusted system access to an SAP Fiori back-end server?

- A. S\_RFCACL
- B. S\_START

- C. S\_RFC
- D. S\_SERVICE

**Answer: A**

Explanation:

For trusted system access to an SAP Fiori back-end server, the authorization object S\_RFCACL is required.

S\_RFCACL (RFC Authorization for Trusted Systems) controls access in trusted RFC (Remote Function Call) connections, which are used to establish secure communication between the Fiori front-end server and the back-end server. This object ensures that only authorized systems or users can execute RFC calls in a trusted relationship, verifying the calling system's identity and the user's permissions. It is critical for securing Fiori app access, as these apps rely on RFC connections to retrieve data from the back-end. S\_START is used for starting Fiori apps, S\_SERVICE governs OData service access, and S\_RFC controls general RFC access but lacks the trusted system specificity of S\_RFCACL. By requiring S\_RFCACL, SAP ensures that trusted connections are tightly controlled, preventing unauthorized access and maintaining the integrity of Fiori back-end interactions in SAP S/4HANA systems.

#### NEW QUESTION # 42

What does SAP Key Management Service (KMS) do to secure cryptographic keys? Note: There are 3 correct answers to this question.

- A. Store keys
- B. Transmit keys
- C. Rotate keys
- D. Generate keys
- E. Conceal keys

**Answer: A,C,D**

Explanation:

\* Context: SAP Key Management Service (KMS) is essential for managing cryptographic keys in SAP systems, providing functionality to enhance data security.

\* Solution Descriptions:

\* Store keys: Ensures secure storage of cryptographic keys.

\* Rotate keys: Allows regular updates of keys to maintain security.

\* Generate keys: Facilitates the creation of new cryptographic keys.

SAP Security References:

\* SAP KMS Documentation

\* SAP Help Portal for Cryptographic Services

#### NEW QUESTION # 43

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is categorized.
- B. It is normalized.
- C. It is prioritized.
- D. It is enriched.
- E. It is pseudonymized.

**Answer: B,D,E**

Explanation:

During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to ensure it can be effectively analyzed for threats while maintaining privacy and enhancing usability.

\* Pseudonymization (B): Sensitive data is pseudonymized to protect privacy. This ensures that personally identifiable information (PII) is masked while still being analyzable for patterns and anomalies.

\* Normalization (D): Data from various sources is normalized into a consistent format. This is critical for correlating and analyzing logs from diverse systems.

\* Enrichment (E): Additional context is added to the data to enhance its value. For example, IP addresses might be enriched with geolocation data, or event logs might be augmented with user attributes.

#### SAP Security References:
