CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sample Questions (Q462-Q467):

NEW QUESTION # 462

With respect to the current state of ESG disclosure globally, issuer reporting frameworks for ESG information are:

- A. harmonized
- **B. fragmented**
- C. mandatory

Answer: B

Explanation:

With respect to the current state of ESG disclosure globally, issuer reporting frameworks for ESG information are fragmented.

Fragmentation of Frameworks: There are numerous ESG reporting frameworks globally, including the Global Reporting Initiative (GRI), Sustainability Accounting Standards Board (SASB), Task Force on Climate-related Financial Disclosures (TCFD), and others. These frameworks have different scopes, metrics, and guidelines.

Lack of Standardization: The lack of a unified global standard leads to inconsistencies in ESG reporting, making it challenging for investors to compare ESG performance across companies and regions.

Efforts Toward Harmonization: While there are ongoing efforts to harmonize ESG reporting standards, such as initiatives by the International Financial Reporting Standards (IFRS) Foundation, the current state remains fragmented.

CFA ESG Investing Reference:

The CFA Institute's reports on ESG disclosure highlight the fragmented nature of current reporting frameworks and the challenges this poses for investors seeking consistent and comparable ESG information. The institute advocates for greater standardization to improve the quality and utility of ESG disclosures.

NEW QUESTION # 463

The Jevons paradox refers to:

- A. Standard cost-benefit analysis being inadequate to quantify the downside losses from climate change
- **B. Relative improvement in natural resource efficiency being offset by increasing natural resource consumption**
- C. Reduction in snow and ice cover being responsible for lowering the amount of sunlight that is reflected back into space

Answer: B

Explanation:

The Jevons paradox occurs when increased efficiency in using a resource leads to a higher overall consumption of that resource rather than a decrease.

Example: As fuel efficiency improves in cars, people may drive more, increasing overall fuel consumption.

This effect can reduce the expected benefits of energy efficiency measures.

Option A relates to climate economics but does not describe the Jevons paradox.

Option C describes the albedo effect, not Jevons paradox.

NEW QUESTION # 464

With respect to ESG reporting:

- **A. business customers may receive ESG information that is not publicly available to investors.**
- B. management has little discretion over ESG disclosures.
- C. larger companies face more resource constraints than smaller companies.

Answer: A

Explanation:

Business customers often receive tailored ESG information directly from companies, which might not be included in public disclosures intended for investors. (ESG Textbook [Pallas CatFin], Chapter 9, Page 499)

NEW QUESTION # 465

Which of the following statements regarding optimization of portfolios for ESG criteria is most accurate?

- **A. ESG integration may enhance the risk and return profile of portfolio optimization**
- B. Optimization is limited to carbon data because of its absolute nature and more standardized reporting metrics
- C. ESG optimization via constraints is similar to exclusionary screening because it also applies a fixed decision on specific securities

Answer: A

Explanation:

ESG integration may enhance the risk and return profile of portfolio optimization. Here's a detailed explanation:

ESG Integration: ESG integration involves systematically incorporating environmental, social, and governance factors into investment analysis and decision-making processes. This approach aims to identify material ESG risks and opportunities that could affect the financial performance of investments.

Risk and Return Profile: By integrating ESG factors, investors can gain a more comprehensive understanding of potential risks and opportunities. This can lead to better-informed investment decisions, potentially improving the risk-adjusted returns of the portfolio.

Benefits of ESG Integration:

Risk Mitigation: Incorporating ESG factors helps investors identify and mitigate risks that traditional financial analysis might overlook. For example, companies with poor environmental practices may face regulatory fines, legal liabilities, and reputational damage.

Opportunities for Outperformance: Companies that manage ESG factors well are often more innovative, efficient, and better positioned to capitalize on emerging market trends. This can lead to superior financial performance and investment returns.

Enhanced Portfolio Resilience: ESG integration can enhance the overall resilience of a portfolio by reducing exposure to companies with high ESG risks and increasing exposure to those with strong ESG practices.

CFA ESG Investing References:

The CFA Institute emphasizes that ESG integration can enhance the risk and return profile of portfolios by providing a more holistic view of investment risks and opportunities (CFA Institute, 2020).

Studies have shown that portfolios incorporating ESG factors can achieve comparable or superior financial performance compared to traditional portfolios, highlighting the potential benefits of ESG integration.

By incorporating ESG factors into portfolio optimization, investors can potentially achieve better risk-adjusted returns and contribute to more sustainable investment outcomes.

NEW QUESTION # 466

Which of the following is best referred to as secondary ESG data?

- A. A transcript of an interview with a company's chief financial officer (CFO).
- B. Bloomberg ESG Disclosure Score.
- C. Survey results on employee satisfaction provided by Glassdoor.

Answer: C

Explanation:

Secondary ESG data refers to information collected from sources other than official company disclosures, often from external third-party sources.

Primary ESG data: Directly provided by companies in sustainability reports, regulatory filings, or financial statements.

Secondary ESG data: Derived from third-party sources such as news articles, employee reviews, external surveys, or social media analysis.

Why is B correct?

Glassdoor employee satisfaction surveys provide insights into workplace culture, labor rights, and social issues—all key ESG aspects. This is not direct company disclosure but rather third-party, externally collected data.

Why not A or C?

A (Bloomberg ESG Score) is primary data because Bloomberg compiles ESG disclosures directly from companies.

C (Interview transcript with CFO) is primary data because it comes directly from company leadership.
