Free PDF 2026 Accurate PCNSE: Reliable Palo Alto Networks Certified Network Security Engineer Exam Exam Simulations

Free demo is available if you purchase PCNSE exam dumps from us, so that you can have a better understanding of what you are going to buy. If you are satisfied with the free demo and want to buying PCNSE exam dumps from us, you just need to add to cart and pay for it. You can receive the download link and password within ten minutes for PCNSE Exam Materials, so that you can start your practicing as quickly as possible. In addition, in order to build up your confidence for the PCNSE exam dumps, we are pass guarantee and money back guarantee. If you fail to pass the exam, we will give you full refund.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11
An engineer must configure the Decryption Broker feature. To which router must the engineer assign the decryption forwarding interfaces that are used in Decryption Broker security chain?

- A. The default virtual router. If there is no default virtual router , the engineer must create one during setup.
- B. The virtual router that routes the traffic that the Decryption Broker security chain inspects.
- C. A virtual router that has no additional interfaces for passing data-type traffic and no other configured routes than those used for the security chain.
- D. A virtual router that is configured with at least one dynamic routing protocol and has at least one entry in the RIB

Answer: B

Explanation:
Explanation
Decryption Broker is a feature that allows you to use a Palo Alto Networks firewall as a decryption broker for other security

devices in your network . It works by decrypting traffic on one interface and forwarding it to another interface where it can be inspected by other devices before being re-encrypted and sent to its destination2. The firewall acts as a transparent bridge between the two interfaces and does not change the source or destination IP addresses of the traffic To configure Decryption Broker, you need to assign decryption forwarding interfaces (DFIs) to the virtual router that routes the traffic that you want to inspect. The DFIs are used to forward decrypted traffic from one interface to another in a security chain3. A security chain is a set of devices that perform different security functions on the same traffic flow3. You can have multiple security chains for different types of traffic or different segments of your network3.

The reason why you need to assign DFIs to the virtual router that routes the traffic is because Decryption Broker uses routing tables to determine which DFI belongs to which security chain and how to forward traffic between them2. If you assign DFIs to a different virtual router than the one that routes the traffic, Decryption Broker will not be able to find them or forward traffic correctly2.

NEW QUESTION # 12
After configuring an IPSec tunnel, how should a firewall administrator initiate the IKE phase 1 to see if it will come up?

- A. test vpn ike-sa gateway <gateway_name>
- B. show vpn ipsec-sa tunnel <tunnel_name>
- C. test vpn ipsec-sa tunnel <tunnel_name>
- D. debug ike stat

Answer: A

Explanation:
To test if IKE Phase 1 is coming up after configuring an IPSec tunnel, the firewall administrator should use the command test vpn ike-sa gateway <gateway_name>. This command initiates the IKE Phase 1 negotiation with the specified gateway, allowing the administrator to check whether the tunnel establishes successfully.

NEW QUESTION # 13
What are three tasks that cannot be configured from Panorama by using a template stack? (Choose three.)

- A. Enable operational modes such as normal mode, multi-vsys mode, or FIPS-CC mode
- B. Configure a device block list
- C. Add administrator accounts
- D. Change the firewall management IP address
- E. Rename a vsys on a multi-vsys firewall

Answer: A,C,D

Explanation:
a) Change the firewall management IP address C. Add administrator accounts E. Enable operational modes such as normal mode, multi-vsys mode, or FIPS-CC mode Short Explanation of Correct Answer Only: These tasks cannot be configured from Panorama by using a template stack because they are device-specific settings that must be configured locally on each firewall1. A template stack can only configure settings that are common to multiple firewalls2. Reference: 1: https://docs.paloaltonetworks.com/panorama/9-1/panorama-admin/panorama-overview/centralized-firewall-configuration-and-update-management/templates-and-template-stacks 2: https://docs.paloaltonetworks.com/best-practices/10-1/best-practices-for-managing-firewalls-with-panorama/configuration-management/template-and-template-stack-management

NEW QUESTION # 14
An administrator has created an SSL Decryption policy rule that decrypts SSL sessions on any port.
Which log entry can the administrator use to verify that sessions are being decrypted?

- A. Decryption log
- B. Data Filtering log
- C. In the details of the Traffic log entries
- D. In the details of the Threat log entries

Answer: C

Explanation:

Explanation/Reference: https://live.paloaltonetworks.com/t5/Configuration-Articles/How-to-Implement-and-Test-SSL-Decryption/ta-p/59719

NEW QUESTION # 15

What must be configured to apply tags automatically based on User-ID logs?

- A. Log Forwarding profile
- B. Device ID
- C. Log settings
- D. Group mapping

Answer: C

Explanation:
Explanation
Depending on the type of log you want to use for tagging, create a log forwarding profile or configure the log settings to define how you want the firewall or Panorama to handle logs. For Authentication, Data, Threat, Traffic, Tunnel Inspection, URL, and WildFire logs, create a log forwarding profile. For User-ID, GlobalProtect, and IP-Tag logs, configure the log settings.
