Integration-Architect Exam Questions - To Gain Brilliant Result

If you buy online classes, you will need to sit in front of your computer on time at the required time; if you participate in offline counseling, you may need to take an hour or two of a bus to attend class. But if you buy Integration-Architect test guide, things will become completely different. Unlike other learning materials on the market, Salesforce Certified Integration Architect torrent prep has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can do exercises. With Salesforce Certified Integration Architect torrent prep, you no longer have to put down the important tasks at hand in order to get to class; with Integration-Architect Exam Questions, you don't have to give up an appointment for study.

Salesforce Certified Integration Architect Sample Questions (Q77-Q82):

NEW QUESTION # 77

Northern Trail Outfitters (NTO) is planning to create a native employee-facing mobile app with the look and feel of Salesforce Lightning Experience. The mobile app needs to integrate with NTO's Salesforce org. Which Salesforce API should be used to implement this integration?

- A. User Interface API
- B. Connect REST API
- C. REST API

Answer: A

NEW QUESTION # 78

Universal Containers is a global financial company that sells financial products and services including, bank accounts, loans, and insurance. UC uses Salesforce Service cloud to service their customer via calls, live chat.

The support agents would open bank accounts on the spot for customers who are inquiring about UC bank accounts.

UC Core banking system is the system of record for bank accounts and all accounts opened in salesforce have to be synced in real-time to the core banking system. Support agents need to inform the customers with the newly created bank account ID which has to be generated from the core banking system.

Which integration pattern is recommended for this use case?

- A. Use salesforce platform event.
- B. Use request and reply.
- C. Use outbound message.
- D. Use streaming API to generate push topic.

Answer: B

Explanation:

Explanation

Using request and reply is the recommended integration pattern for this use case because it allows the support agents to send a request to the core banking system and receive a response with the bank account ID in real-time. This way, the support agents can inform the customers with the newly created bank account ID without any delay or inconsistency. Using streaming API to generate push topic is not a good solution because it is used for event-driven integration, not for web-service integration. Using outbound message is also not a good solution because it is a Salesforce-specific feature that uses SOAP web services, which may not be compatible with the core banking system. Using Salesforce platform event is also not a good solution because it is used for event-driven integration, not for web-service integration. NEW QUESTION # 79

A company that is a leading provider of courses and training delivers courses using third party trainers. The trainer for the company has to be verified from 10 different training accreditation verification agencies before providing training for the company. Each training accreditation agency has its own response time, which could take days to confirm a trainer.

The company decided to automate the trainer accreditation verification process by integrating to the agencies web services.

What is the recommended approach to automate this process?

- A. Create a trigger on the trainer record to make a Callout to each verification agencies, write business logic to consolidate the verification then update the trainer status to "verified".
- B. Make an apex callout using @future annotation to make the call out to all different agencies. The response should update the trainer status to "verified".
- C. Use salesforce external service to make the call out, Salesforce external service should check the verification agencies until the result is verified, then update the trainer status to "verified".
- D. Use middleware to handle the call out to the 10 different verification services, the middleware will handle the business logic of consolidating the verification result from 10 services, then make a call-in to salesforce and update the verification status to "verified".

Answer: D

NEW QUESTION # 80

A large enterprise customer operating in a high regulated industry is planning to implement Salesforce for customer facing associates in both Sales and Service, and back-office staff. The business processes that Salesforce supports are critical to the business.

Salesforce will be integrated to multiple back-office systems to provide a single interface for associates.

Reliability and monitoring of these integrations are required as associates support customers.

Which integration solution should the architect consider when planning the implementation?

- A. Leverage Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities.
- B. Decouple back-office system callouts into separate distinct services that have inbuilt error logging and monitoring frameworks.
- C. Build a custom integration gateway to support back-office system integrations and ensure reliability and monitoring capabilities.
- D. Architect Services in back-office systems to support callouts from Salesforce and build reliability, monitoring and reporting

capabilities.

Answer: A

Explanation:

Leveraging Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities is the best integration solution for this scenario. Middleware is a software layer that acts as an intermediary between Salesforce and other systems, providing a common platform for data transformation, routing, orchestration, security, error handling, logging, and monitoring. Middleware can help to ensure reliability and performance of the integrations, as well as provide visibility and control over the integration processes. Middleware can also support various integration patterns and protocols, such as SOAP, REST, JMS, etc. Reference: Salesforce Integration Architecture Designer Resource Guide, page 14

NEW QUESTION # 81

A company needs to integrate a legacy on premise application that can only support SOAP API. After the Integration Architect has evaluated the requirements and volume, they determined that the Fire and Forget integration pattern will be most appropriate for sending data from Salesforce to the external application and getting response back in a strongly typed format.

Which integration capabilities should be used to integrate the two systems?

- A. Platform Events for Salesforce to Legacy System direction and SOAP API using Partner WSDL for the communication back from legacy system to salesforce.
- B. Outbound Message for Salesforce to Legacy System direction and SOAP API using Partner WSDL for the communication back from legacy system to salesforce.
- C. **Outbound Message for Salesforce to Legacy System direction and SOAP API using Enterprise WSDL for the communication back from legacy system to salesforce.**
- D. Platform Events for Salesforce to Legacy System direction and SOAP API using Enterprise WSDL for the communication back from legacy system to salesforce.

Answer: C

NEW QUESTION # 82

.....

Compared to other products in the industry, Integration-Architect actual exam have a higher pass rate. If you really want to pass the exam, this must be the one that makes you feel the most. Our company guarantees this pass rate from various aspects such as content and service. Of course, we also consider the needs of users, Integration-Architect Exam Questions hope to help every user realize their dreams. The 99% pass rate of our Integration-Architect study guide is a very proud result for us. Buy Integration-Architect study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!
