Exam 220-1202 Actual Tests & 220-1202 Valid Exam Sims

All these 220-1202 exam dumps formats contain real, updated, and error-free CompTIA A+ Certification Exam: Core 2 (220-1202) exam questions that prepare you for the final 220-1202 exam. To give you an idea about the top features of 220-1202 Exam Dumps, a free demo download facility is being offered to CompTIA A+ Certification Exam: Core 2 candidates. This free 220-1202 exam questions demo download facility is available in all three 220-1202 exam dumps formats.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q184-Q189):

NEW QUESTION # 184

Which of the following is found in an MSDS sheet for a battery backup?

- A. Voltage specifications
- B. Emergency procedures
- C. Installation instructions
- D. Configuration steps

Answer: B

Explanation:

A Material Safety Data Sheet (MSDS) provides critical safety and handling information for hazardous materials - in this case, the battery's chemicals. It includes emergency procedures (first-aid measures, fire-fighting steps, spill containment), ensuring responders know how to act safely in an incident.

NEW QUESTION # 185

A company wants to enforce the following browser requirements:

- * Administrators can add URLs to the Trusted URL list
- * Passwords will not be stored through the browser
- * When the browser is closed, all history will be saved
- * Browser security will be set to high
- * Specific URLs or ratings will be restricted from access

Which of the following is the best for the technician to configure?

- **A. Browser policy**
- B. Web gateway
- C. Web proxy
- D. Group Policy

Answer: A

Explanation:

The correct answer is C. Browser policy, because the listed requirements apply specifically to browser-level behavior and settings, not general network traffic or system-wide configuration. Browser policies allow administrators to centrally control how browsers behave on managed systems.

The Quentin Docter - CompTIA A+ Complete Study Guide explains that modern browsers support administrative templates or policies that govern password storage, trusted sites, security levels, history handling, and URL restrictions. These policies ensure consistent behavior across all user systems without relying on manual configuration.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide clarifies that while Group Policy can deploy browser policies, the object being configured is still the browser itself. The question asks what is best to configure, not how it is delivered. Browser policies directly control password management, trusted URLs, and security zones.

The Mike Meyers / Mark Soper Lab Manual further notes that web proxies and gateways filter traffic at the network level and cannot control local browser features such as password storage or history retention.

Because every listed requirement is a browser-specific control, the most accurate and targeted solution is Browser policy, making C the correct answer.

NEW QUESTION # 186

An administrator is managing a network of Windows workstations and discovers that several users have been able to bypass standard security restrictions, such as installing unapproved software and changing system time. The administrator suspects the default security settings are too permissive across the organization. Which of the following is the BEST way to address this issue and ensure a consistent security baseline?

- **A. Implement an appropriate group policy.**
- B. Enable account lockout policies.
- C. Configure automatic updates for Windows.
- D. Reset account passwords.

Answer: A

Explanation:

When defaults are too permissive across multiple Windows workstations, the most efficient and scalable fix is to enforce a standardized security baseline using Group Policy. The All-in-One guide explains that Windows provides extensive "security features" such as requiring complex passwords, limiting logon times, and controlling whether users can install applications-"and the list goes on to thousands of security features." It states that "To configure these features, you use group policies," and that you configure them using the Group Policy Editor (gpedit.msc).

This directly matches the scenario: repeated unauthorized attempts suggest the need to tighten multiple security settings consistently. While enabling account lockout policies (D) is one good control, the question is broader-"default security settings may be too permissive"-so the best action is to implement the overall appropriate group policy that can include lockout, password complexity, auditing, and other controls together.

Updates and password resets are useful, but they don't systematically correct permissive baseline settings across systems. Therefore, implementing an appropriate group policy is the best answer.

NEW QUESTION # 187

A technician is working in a Linux terminal and needs to quickly view the configuration details stored within a text file named network.conf. Which of the following commands should the technician use to display the entire contents of the file on the screen?

- A. ls (corrected from "Is")
- B. chmod
- C. cat
- D. sudo

Answer: C

Explanation:

To display a file's contents in Linux, the standard command is `cat`. Quentin Docter states: "Sometime you just need to view the contents of a file. To view the contents of a file, use the `cat` command," and shows an example `cat /etc/hosts` displaying the file output. He also lists essential Linux commands and explicitly defines `cat` as: "Displays the contents of a file." The other options do not meet the requirement: `chmod` changes file permissions, `ls` lists directory contents (or file names), and `sudo` runs a command with elevated privileges—none directly display a file's contents by themselves. A+ also expects you to know that `cat` can do more than display; it can concatenate files and redirect output, but for this question the key function is simply viewing a file. Therefore, the correct command is `cat` (B).

NEW QUESTION # 188

Which of the following file types would a desktop support technician most likely use to automate tasks for a Windows user log-in?

- A. .py
- B. .js
- C. .bat
- D. .sh

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A: .bat file (batch file) is a script file in DOS, OS/2, and Microsoft Windows. It contains a series of commands that are executed by the command-line interpreter. In Windows environments, batch files are commonly used to automate log-in tasks, such as mapping network drives, launching applications, or setting environment variables during the user's logon process.

B: .sh is a shell script used in Linux/Unix environments.

C: .py is a Python script, which can be used for automation but is not commonly run directly at user logon in standard Windows environments.

D: .js is JavaScript, used mainly in web development and not for system-level scripting in Windows logon automation.
