Oracle Project Management Cloud 2025 Implementation Professional Sample Questions (Q30-Q35):

NEW QUESTION # 30
Your customer has the following setups on the project plan type that they are using for their projects:
Use Task Planned Dates as Task Assignment Dates = Yes
Automatically Roll Up Task Planned Dates = Yes

Synchronize Task Transaction Dates with Planned Dates = No
With these setups in place, you perform the following actions:
1. Create a new subtask (Sub Task 1) with a start date of 15-Jun-2016 on the project that has as start date of
01-Jul-2016.
2. Create another new subtask (Sub Task 2) after the previous action is saved.
What would the correct behavior of the application be after these actions? (Choose the best answer.)

- A. After the creation and saving of Sub Task 1, Task Start Date would be changed to 01-Jul-2016 and Sub Task 2 would be created with 01-Jul-2016.
- B. After the creation of Sub Task 1, Project Start Date would remain unchanged as 01-Jul-2016 and Sub Task 2 would be created with 15-Jun-2016.
- C. After the creation of Sub Task 1, Project Start Date would be changed to 15-Jun-2016 and Sub Task 2 would be created with 15-Jun-2016.
- D. Project Start Date would remain unchanged as 01-Jul-2016 for both actions but the start dates on both subtasks would remain 15-Jun-2016.

Project Labor Demand: How It's Calculated
Project executives want to track the labor demand in projects in their organization. The Project Hierarchy Viewer provides project executives a hierarchical view of the enterprise project structure (EPS) along with the labor demand in terms of full-time equivalent (FTE).
Settings That Affect Project Labor Demand
Project application administrators must do the following to set up how project labor demand is calculated:
* Organize projects into hierarchical groups on the Manage Enterprise Project Structure page.
* Change the quarterly FTE hours for the organization on the Define Project Management Implementation Options page, if different from 520 hours.
Note: You can choose to view labor demand annually instead of quarterly. The Project Hierarchy Viewer uses the current date to determine which year or quarter to display.
How Project Labor Demand Is Calculated
The Project Hierarchy Viewer calculates project labor demand in the following manner:
* Spreads the allocation hours from the Manage Project Resources page evenly over the days that the resources are allocated to the project.
* Divides the quarterly project allocation hours by the quarterly FTE hours to get the labor demand.
* Rolls up the quarterly and annual labor demand up the hierarchy.

NEW QUESTION # 32

Your organization has been awarded a new contract based on which you are allowed to sell:
* Items not tracked in inventory
* Inventory items
* Services
Which contract structure would fulfill your requirement of item sales? (Choose the best answer.)

- A. Create two contract lines with a line type each of "free-form, project-based buy agreement" and "bundle sell, project-based".
- B. Create two contract lines with a line type each of "sell intent, item, project-based' and "subscription, project-based, sell".
- C. Create two contract lines with a line type each of "sell intent, free-form, project-based" and "sell intent, item, project-based".
- D. Create two contract lines with a line type each of "product, project-based, sell agreement, standalone" and "sell intent, item, project-based".

Answer: C

Explanation:
To sell items not tracked in inventory, inventory items, and services, you can create two contract lines with different line types. The line type of "sell intent, free-form, project-based" allows you to sell any item or service without specifying the item number or quantity. The line type of "sell intent, item, project-based" allows you to sell inventory items by specifying the item number and quantity. Both line types are project- based, meaning they are linked to a project and generate revenue based on project performance. Reference:

NEW QUESTION # 33
Select two correct statements about project classifications on a template. (Choose two.)

- A. Project class category in a project classification must be associated with a Set Code.
- B. Project Classification is a mandatory field on a project template.
- C. Set Code is not required for a project class category in a project classification.
- D. When a project is created from a template, the required project classifications must be entered.

Answer: A,D

Explanation:
Project classifications are used to group and report on projects based on different criteria. A project template can have one or more project classifications, which can be either required or optional. When a project is created from a template, the required project classifications must be entered, while the optional ones can be left blank. A project class category in a project classification must be associated with a set code, which determines the list of values for the project class. Project classification is not a mandatory field on a project template, but it is recommended to use it for reporting purposes. NEW QUESTION # 34
Which two statements describe how the Resource Qualification Score is calculated?

- A. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource does not have the qualification.
- B. An individual's score is 100% if the resource request has a qualification, but no proficiency is specified, and the resource has the qualification.
- C. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource has the qualification that meets the specified proficiency.
- D. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource has the qualification with a proficiency that is lower or higher than specified.

Answer: B,C

Explanation:
The Resource Qualification Score is a percentage that indicates how well an individual matches the qualifications required for a

resource request. An individual's score is 100% if either of the following conditions are met:
* The resource request has a qualification, but no proficiency is specified, and the resource has the qualification. This means that any level of proficiency is acceptable for the qualification.
* The resource request has a qualification with a specified proficiency and the resource has the qualification that meets the specified proficiency. This means that the resource has the exact level of proficiency required for the qualification. An individual's score is not 100% if the resource request has a qualification with a specified proficiency and the resource does not have the qualification or has a different level of proficiency than required. In this case, the score is calculated based on how close the resource's proficiency is to the required proficiency.
