NEW QUESTION # 102

Which AEM feature is used to monitor active OSGi configurations?

- A. OSGi Web Console (/system/console/configMgr)
- B. CRXDE Lite
- C. Cloud Manager UI
- D. AEM Operations Dashboard

Answer: A

NEW QUESTION # 103

What is the correct way to provision a new AEM environment in Cloud Manager?

- A. Use the Adobe Admin Console to create a new environment
- B. Install a new AEM instance manually on a local machine
- **C. Create and configure the environment in Cloud Manager**
- D. Deploy the new instance using CRXDE Lite

Answer: C

NEW QUESTION # 104

A DevOps engineer integrates an on-premise repository with Cloud Manager using Jenkins and the Git plugin. After a few builds, the developers notice that code is not getting merged into the proper branch on Cloud Manager.

There are no build errors to report.

What should the DevOps engineer do?

- A. Check that the name of the target remote in the post build action equals the Cloud Manager remote.
- **B. Make sure to do a force push merge code with the Cloud Manager branch in the post build actions.**
- C. Validate that the credentials for the local and Cloud Manager repositories are correct.
- D. Confirm that the URLs for the local and Cloud Manager repositories are correct.

Answer: B

Explanation:

When integrating external CI/CD tools (like Jenkins) with Adobe Cloud Manager's Git repository, a common, silent failure occurs during the push phase. Because Cloud Manager occasionally modifies the Git history internally (e.g., during environment syncing or Adobe updates), the local Jenkins repository history and the Cloud Manager remote history can diverge. When this happens, a standard git push fails silently or is rejected by the remote without throwing a standard build compilation error. The recognized DevOps workaround for this specific Cloud Manager Git integration is to configure the Jenkins post-build Git publisher to perform a "force push" to overwrite the remote branch.

NEW QUESTION # 105
