NEW QUESTION # 32

Given the following Core Data Service View Entity Data Definition:

```

```

```
DEFINE VIEW ENTITY demo_flight_info_union AS

```
}
```

When you attempt to activate the definition, what will be the response?

- A. Activation error because the key fields of the union do not match
- **B. Activation error because the field names of the union do not match**
- C. Activation error because the field types of the union do not match
- D. Activation successful

Answer: B

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* In CDS UNION, field names and positions must match exactly across all SELECT statements.

* In this case, the first SELECT uses id, while the second uses agencynum AS id, which is fine.

However, the literal 'Customer' AS partner and 'Agency' AS partner create inconsistencies.

* SAP CDS guidelines specify that for a UNION, field names must be identical and aligned in order; mismatches cause an activation error.
