Each of the ActualTorrent Fortinet NSE8\_812 exam dumps formats excels in its way and carries actual Fortinet NSE 8 - Written Exam (NSE8\_812) (NSE8\_812) exam questions for optimal preparation. All of these Fortinet NSE 8 - Written Exam (NSE8\_812) (NSE8\_812) practice question formats are easy to use and extremely convenient such that even newbies find them simple.

One of the benefits of achieving the Fortinet NSE8\_812 certification is that it can help you stand out in a competitive job market. By earning this certification, you'll be able to demonstrate that you have the skills and expertise needed to help organizations secure their networks and protect against advanced threats. This can make you a more attractive candidate for roles such as network security engineer, security analyst, and security operations center (SOC) analyst.

To be eligible for the NSE8\_812 Certification Exam, you must have a valid NSE7 certification and at least two years of experience in network security. You should also have extensive knowledge of Fortinet products and services, including FortiGate, FortiAnalyzer, FortiManager, and FortiSandbox.

**NSE8\_812 Latest Test Prep - NSE8\_812 Formal Test**

Our qualified team of Fortinet Fortinet NSE 8 - Written Exam (NSE8\_812) study material to improve the quality and to match the changes in the syllabus and pattern shared by NSE8\_812. Our desktop Fortinet NSE8\_812 Practice Exam software is designed for all those candidates who want to learn and practice in the actual Fortinet NSE8\_812 exam environment.

Fortinet NSE8\_812 Exam is a vital certification test for IT professionals who want to demonstrate advanced knowledge and skills in network security. Fortinet NSE 8 - Written Exam (NSE8\_812) certification shows that the holder has a comprehensive understanding of Fortinet's security services and solutions and can support complex networks while ensuring security at all levels. By earning this certification, candidates can advance their career potential and potentially earn a higher salary, making the exam worth considering for those interested in network security.

## Fortinet NSE 8 - Written Exam (NSE8\_812) Sample Questions (Q45-Q50):

### NEW QUESTION # 45

Refer to the exhibits.

The exhibits show a FortiGate network topology and the output of the status of high availability on the FortiGate. Given this information, which statement is correct?

- A. FGVMEVLQOG33WM3D and FGVMEVGCJNHFYI4A share a virtual MAC address.
- B. The cluster members are on the same network and the IP addresses were statically assigned.
- C. The cluster mode can support a maximum of four (4) FortiGate VMs
- D. The ethertype values of the HA packets are 0x8890, 0x8891, and 0x8892

**Answer: A**

Explanation:

The output of the status of high availability on the FortiGate shows that the cluster mode is active-passive, which means that only one FortiGate unit is active at a time, while the other unit is in standby mode. The active unit handles all traffic and also sends HA heartbeat packets to monitor the standby unit. The standby unit becomes active if it stops receiving heartbeat packets from the active unit, or if it receives a higher priority from another cluster unit. In active-passive mode, all cluster units share a virtual MAC address for each interface, which is used as the source MAC address for all packets forwarded by the cluster. Reference:

<https://docs.fortinet.com/document/fortigate/6.4.0/cookbook/103439/high-availability-with-two-fortigates>

### NEW QUESTION # 46

Refer to the exhibits.

A customer has deployed a FortiGate with iBGP and eBGP routing enabled. HQ is receiving routes over eBGP from ISP 2; however, only certain routes are showing up in the routing table-Assume that BGP is working perfectly and that the only possible modifications to the routing table are solely due to the prefix list that is applied on HQ.

Given the exhibits, which two routes will be active in the routing table on the HQ firewall? (Choose two.)

- A. 172.16.204.128/25
- B. 172.16.201.96/29
- C. 172.620.64,27
- D. 172.16.204.64/27

**Answer: A,D**

Explanation:

The prefix list in the exhibit is configured to match prefixes that are either in the 172.16.204.0/24 subnet or in the 172.62.0.0/16 subnet. The routes that match these prefixes will be active in the routing table on the HQ firewall.

The routes that match the following prefixes will not be active in the routing table:

\* 172.16.201.96/29

\* 172.62.0.64/27

These routes do not match the criteria set by the prefix list.

\* Prefix lists | FortiGate / FortiOS 7.4.0 - Fortinet Document Library

\* Configuring BGP | FortiGate / FortiOS 7.4.0 - Fortinet Document Library

### NEW QUESTION # 47

A customer is planning on moving their secondary data center to a cloud-based IaaS. They want to place all the Oracle-based systems Oracle Cloud, while the other systems will be on Microsoft Azure with ExpressRoute service to their main data center. They have about 200 branches with two internet services as their only WAN connections. As a security consultant you are asked to design an architecture using Fortinet products with security, redundancy and performance as a priority. Which two design options are true based on these requirements? (Choose two.)

- A. Systems running on Azure will need to go through the main data center to access the services on Oracle Cloud.
- **B. Branch FortiGate devices must be configured as VPN clients for the branches' internal network to be able to access Oracle services without using public IPs.**
- C. Two ExpressRoute services to the main data center are required to implement SD-WAN between a FortiGate VM in Azure and a FortiGate device at the data center edge
- **D. Use FortiGate VM for IPSEC over ExpressRoute, as traffic is not encrypted by Azure.**

**Answer: B,D**

Explanation:

\* A. Systems running on Azure will need to go through the main data center to access the services on Oracle Cloud. This is because the Oracle Cloud is not directly connected to the Azure Cloud. The traffic will need to go through the main data center in order to reach the Oracle Cloud.

\* C. Branch FortiGate devices must be configured as VPN clients for the branches' internal network to be able to access Oracle services without using public IPs. This is because the Oracle Cloud does not allow direct connections from the internet. The traffic will need to go through the FortiGate devices in order to reach the Oracle Cloud.

The other options are not correct.

\* B. Use FortiGate VM for IPSEC over ExpressRoute, as traffic is not encrypted by Azure. This is not necessary. Azure does encrypt traffic over ExpressRoute.

\* D. Two ExpressRoute services to the main data center are required to implement SD-WAN between a FortiGate VM in Azure and a FortiGate device at the data center edge. This is not necessary. A single ExpressRoute service can be used to implement SD-WAN between a FortiGate VM in Azure and a FortiGate device at the data center edge.

#### NEW QUESTION # 48

Refer to the exhibits.

The exhibits show the configuration and debug output from a FortiGate Public SDN Connector. What is a possible reason for this dynamic address object to be empty?

- A. The Client secret is incorrect.
- **B. The App registration does not have a role with necessary read permissions on the resource group.**
- C. The resource group NSE8-Lab does not exist.
- D. The Application ID is incorrect.

**Answer: B**

#### NEW QUESTION # 49

Refer to the exhibit.

An HTTPS access proxy is configured to demonstrate its function as a reverse proxy on behalf of the web server it is protecting. It verifies user identity, device identity, and trust context, before granting access to the protected source. It is assumed that the FortiGate EMS fabric connector has already been successfully connected.

You need to ensure that ZTNA access through the FortiGate will redirect users to the FortiAuthenticator to perform username/password and multifactor authentication to validate access prior to accessing resources behind the FortiGate. In this scenario, which two further steps need to be taken on the FortiGate? (Choose two.)

- **A. Create a SAML user/server object referring to the FortiAuthenticator.**
- B. Create a firewall rule that allows access from the remote endpoint to the resources behind the FortiGate.
- C. Create an authentication rule that sets the sso-auth-method to the FortiAuthenticator.
- **D. Create an authentication scheme with the "method" as SAML.**

**Answer: A,D**
