We have authoritative production team made up by thousands of experts helping you get hang of our D-PVM-OE-01 study question and enjoy the high quality study experience. We will update the content of D-PVM-OE-01 test guide from time to time according to recent changes of examination outline and current policy. Besides, our D-PVM-OE-01 Exam Questions can help you optimize your learning method by simplifying obscure concepts so that you can master better. Furthermore with our D-PVM-OE-01 test guide, there is no doubt that you can cut down your preparing time in 20-30 hours of practice before you take the exam.

## EMC D-PVM-OE-01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>PowerMax Family Local and Remote Replication Concepts: This section of the exam measures the skills of Backup and Recovery Specialists and covers the features and functionalities of TimeFinder SnapVX. Candidates must differentiate between SnapVX snapshots and clones while understanding their role in data protection. One key skill assessed is comparing the use cases of snapshots and clones.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>PowerMaxOS 10 Data Mobility: This section of the exam measures the skills of Data Migration Specialists and covers data mobility and migration features in PowerMaxOS 10. Candidates must understand the benefits of non-disruptive migration and be able to perform migrations using Unisphere for PowerMax. One key skill assessed is executing non-disruptive data migrations.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Solutions Enabler 10 Implementation: This section of the exam measures the skills of Infrastructure Engineers and focuses on the fundamentals of Solutions Enabler. Candidates must understand its installation, upgrade processes, gatekeeper management, and daemon functions across different platforms. One crucial skill tested is managing Solutions Enabler daemons.</li> </ul>

Topic 5	<ul style="list-style-type: none"> <li>• <b>PowerMax Family Monitoring and Workload Planning:</b> This section of the exam measures the skills of Performance Analysts and focuses on monitoring storage environments and workload planning using Unisphere for PowerMax. Candidates must understand how to track performance metrics, detect issues, and optimize workloads to enhance storage efficiency. One key skill tested is monitoring storage health through Unisphere.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>PowerMax Family Management in a Virtual Environment:</b> This section of the exam measures the skills of Virtualization Engineers and evaluates the integration of PowerMax storage in virtualized environments. Candidates must understand VMware vSphere, the functionalities of Virtual Storage Integrator (VSI), and how to monitor virtualized workloads using Unisphere for PowerMax. One critical skill assessed is tracking virtual machine storage performance.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• <b>PowerMax Family Storage Provisioning:</b> This section of the exam measures the skills of Storage Administrators and covers the architecture, configurations, and management of the PowerMax family. Candidates must understand system models, port and device management, and provisioning methods using Unisphere for PowerMax. They are expected to perform service level-based provisioning and allocate storage through auto-provisioning groups. One key skill assessed is configuring storage using Unisphere for PowerMax.</li> </ul>

## The Key to Success: Proper Planning and the Right EMC D-PVM-OE-01 Exam Questions

In today's rapidly changing EMC industry, the importance of obtaining EMC D-PVM-OE-01 certification has become increasingly evident. With the constant evolution of technology, staying competitive in the job market requires professionals to continuously upgrade their skills and knowledge. The ValidVCE is committed to completely assisting you in exam preparation with D-PVM-OE-01 Questions. Success in the Dell Technologies PowerMax Operate (D-PVM-OE-01) certification exam is crucial in the tech sector, where the stakes are high, and a single mistake can have significant consequences.

## EMC Dell Technologies PowerMax Operate Sample Questions (Q86-Q91):

### NEW QUESTION # 86

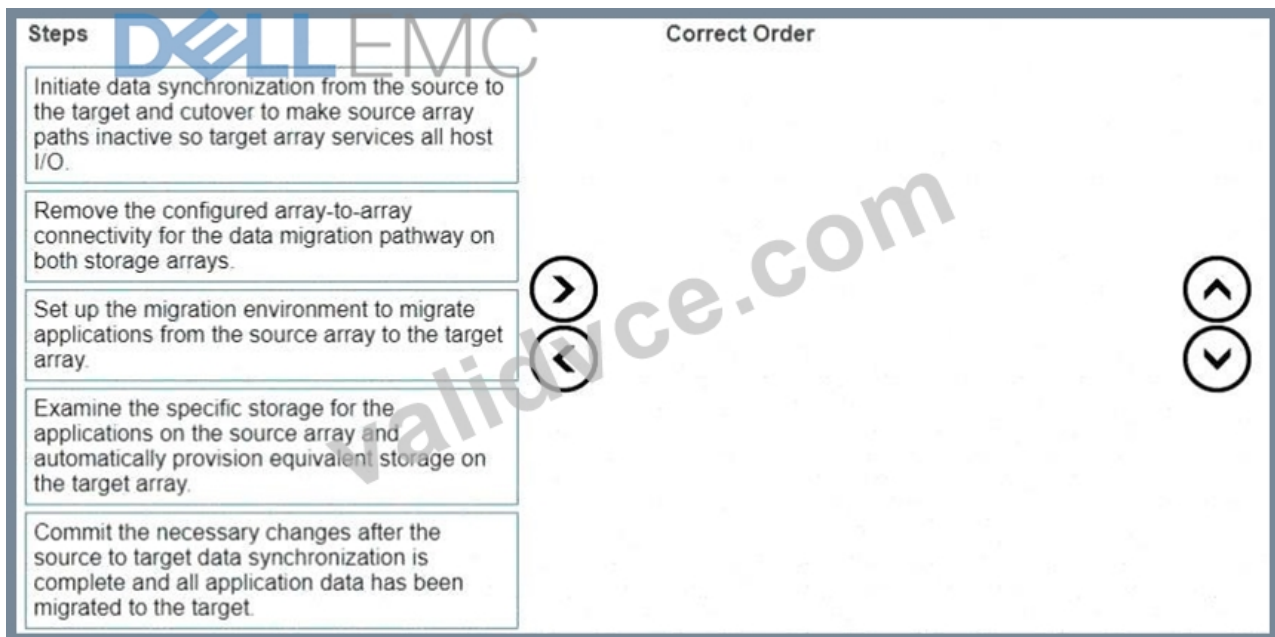

A TimeFinder SnapVX snapshot of a Storage Group was created with a time to live setting of seven days. Fourteen days after snapshot creation, a query shows that the snapshot still exists. What is a possible reason for this issue?

- A. Reserved Capacity limit was exceeded
- **B. Snapshot has one or more linked targets**
- C. Snapshot was created in NoCopy mode
- D. Snapshot was not manually terminated

**Answer: B**

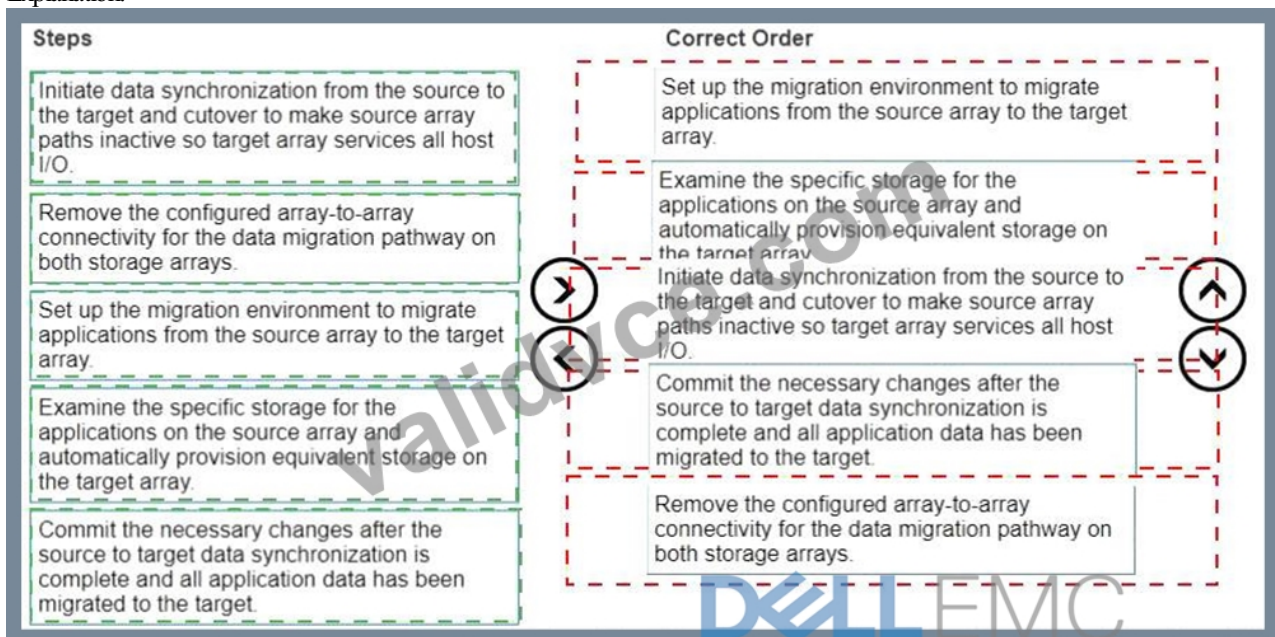

### NEW QUESTION # 87

Place the steps in the correct order for performing a Non-Disruptive Migration

**Answer:**

**Explanation:**

**Explanation:**

- \* Set up the migration environment to migrate applications from the source array to the target array.
- \* Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.
- \* Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.
- \* Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.
- \* Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.

**Correct Order:**

- \* Set up the migration environment to migrate applications from the source array to the target array.
- \* Why: This is the initial setup phase, where you configure the necessary settings on both the source and target arrays to enable the migration. This involves actions like:
  - \* Verifying compatibility between the source and target arrays.
  - \* Ensuring that the required licenses are in place (e.g., NDM license).
  - \* Configuring network connectivity (FC or iSCSI) for data transfer between the arrays.
- \* Examine the specific storage for the applications on the source array and automatically provision equivalent storage on the target array.

array.

\* Why: Before migrating data, you need to ensure that the target array has the appropriate storage capacity and configuration to host the applications.

\* How: NDM can often automatically provision equivalent storage on the target based on the source configuration. This includes creating storage groups, volumes, and masking views that mirror the source.

\* Initiate data synchronization from the source to the target and cutover to make source array paths inactive so target array services all host I/O.

\* Why: This is the core of the migration process. Data is copied from the source to the target while the application continues to run. Cutover is the final step where I/O is redirected to the target array.

\* How:

\* Synchronization: Data is copied in the background.

\* Cutover: Once synchronization is complete, a brief cutover is performed. In a well-planned NDM, this cutover is designed to be within the I/O timeout limits of most applications.

\* Commit the necessary changes after the source to target data synchronization is complete and all application data has been migrated to the target.

\* Why: This step finalizes the migration and makes it permanent.

\* What it involves: The migration session is acknowledged and the configuration is finalized on the target array.

\* Remove the configured array-to-array connectivity for the data migration pathway on both storage arrays.

\* Why: After the migration is complete, the temporary connections used for data transfer between the arrays should be removed to free up resources and maintain a clean configuration.

\* What it involves: This typically means removing the FC zones or iSCSI settings that were configured specifically for the NDM process.

#### NEW QUESTION # 88

When reviewing storage group compliance for a specific storage group, you notice that the weighted response time for the storage group over the last four hours is compliant. Upon further research, you see that the weighted response time for the last two weeks does not meet the defined response time for the assigned service level.

What is the overall compliance status for the storage group?

- A. Stable
- B. Marginal
- C. Critical
- D. Non-compliant

**Answer: D**

Explanation:

Step by Step Comprehensive Detailed Explanation:

When evaluating storage group compliance in PowerMax, Unisphere considers the weighted response time of the storage group against its defined service level objectives (SLOs). The compliance status is determined based on how well the storage group meets its response time goals over different time periods.

In this case, even though the storage group's weighted response time is compliant over the last four hours, the fact that it does not meet the defined response time for the last two weeks indicates an overall non-compliant status.

This means that while the storage group might be performing adequately in the short term, it has not consistently met its performance goals over a longer period. This could indicate potential performance issues or the need for adjustments to the storage group's configuration or service level.

Why other options are incorrect:

\* A. Stable: A stable status would indicate consistent compliance over all time periods.

\* B. Marginal: A marginal status might suggest borderline performance, but not necessarily a clear violation of SLOs.

\* D. Critical: A critical status would likely indicate a severe performance issue or a significant breach of SLOs.

\* Dell Unisphere for PowerMax 10.0.0 Online Help: The online help for Unisphere provides detailed information about storage group compliance monitoring, including how compliance status is determined and what the different status levels indicate. You can access this help within Unisphere itself or on the Dell Support website.

\* Dell PowerMax Family: Essentials and Best Practices Guide: This guide may offer general information about performance management and service level objectives in PowerMax, providing context for understanding storage group compliance.

#### NEW QUESTION # 89

An administrator is managing two PowerMax arrays that are located in two different data centers. The data centers are 550 km apart and are connected by a high bandwidth network link. The administrator wants to replicate data between the two arrays and achieve the lowest RPO. When using SRDF, which mode meets this requirement?

- A. Synchronous
- **B. Metro**
- C. Adaptive Copy
- D. Asynchronous

**Answer: B**

#### NEW QUESTION # 90

What is the correct sequence of actions performed by a PowerMax when the SRDF failback command is executed?

**Steps**

Resume the RDF links

Write disable the R2 devices

Read/Write enable the R1 devices

Merge the device track tables

Suspend the RDF links

**Answer Area**

Write disable the R2 devices

Suspend the RDF links

Merge the device track tables

Resume the RDF links

Read/Write enable the R1 devices

Explanation:

1. write disable R2
2. suspend
3. Merge
4. Resume
5. read/write enable.

#### NEW QUESTION # 91

.....

You can get three different versions for D-PVM-OE-01 exam dumps. The D-PVM-OE-01 pdf file is the common version which many candidates want to choose. The D-PVM-OE-01 pdf dumps can be printed into papers, which is convenient to reviewing and remember. The D-PVM-OE-01 PC test engine is suitable for any windows system, which can simulate the actual test. While the D-PVM-OE-01 Online Test engine can be installed on any electronic device, supporting off-line study. You can choose the proper version as your needs for D-PVM-OE-01 test preparation.
