## Authentic RedHat EX280 Exam Questions

Don't waste further time and money, get real Red Hat Certified Specialist in OpenShift Administration exam (EX280) pdf questions and practice test software, and start Red Hat Certified Specialist in OpenShift Administration exam (EX280) test preparation today. TestKingIT will also provide you with up to 1 year of free Red Hat Certified Specialist in OpenShift Administration exam exam questions updates.

## Why getting RedHat EX280 Exam is important in this competitive job market

The job market is competitive, and with the rise of cloud computing, it's only getting more so. If you're looking for a job as a Linux administrator, you'll need to have at least one certification from Red Hat or another vendor. **RedHat EX280 exam dumps** will help you to get certified and get highly paid job.

Getting certified can help you stand out from the crowd when applying for jobs, but there are other benefits as well. Certification shows that you have the skills necessary to succeed in your chosen profession - plus, employers often give preference to applicants who are already certified.

Red Hat Certified Specialist in OpenShift Administration exam is a crucial step toward becoming a successful professional. We are providing free product testing content for preparation on weekly period basis in our simulator for demo. In our server documentation we guarantee to get updated actual exam events updates on blog post. We have easy comparable prep answers for the real exam on our remote engine platforms and don't waste your money for the less qualification dump to fail.

Red Hat Certified Specialist (RHCSA) certification is aimed at candidates with little or no IT experience who want to get started in an IT career path by learning how to use Red Hat Enterprise Linux operating systems.

The RHCSA exam tests your knowledge of basic system administration tasks on Red Hat Enterprise Linux 7 including file management; user management; application deployment; basic firewall configuration; monitoring; troubleshooting process management; using command line tools; and service management using systemd and related topics such as SELinux configuration, chkconfig and systemctl commands for managing services etc.

The RedHat EX280 Exam consists of various topics, including installation and configuration of OpenShift, application deployment, security, and troubleshooting. EX280 exam format is performance-based, which means that the candidates will be evaluated based on their ability to perform real-world tasks in a simulated environment. EX280 exam is conducted in a remote, secure environment, and candidates are required to have a reliable internet connection and a computer that meets the necessary technical requirements. Upon passing the exam, candidates will receive the Red Hat Certified Specialist in OpenShift Administration certification, which is recognized worldwide as a symbol of excellence in OpenShift administration.

## RedHat Red Hat Certified Specialist in OpenShift Administration exam Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Create a CronJob test-cron

Task information Details:

Create service account jupiter .

Grant anyuid SCC and cluster- admin to it.

Update CronJob cron-test to use that service account.

### Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

\* Switch to the project hosting the cronjob, if needed:

```
oc project cron-test
```

\* Create the service account:

```
oc create sa jupiter
```

\* Grant anyuid:

```
oc adm policy add-scc-to-user anyuid -z jupiter -n cron-test
```

\* Grant cluster-admin:

```
oc adm policy add-cluster-role-to-user cluster-admin system:serviceaccount:cron-test:jupiter
```

\* Update the cronjob:

```
oc patch cronjob cron-test -p '{"spec":{"jobTemplate":{"spec":{"template":{"spec":{"serviceAccountName":"jupiter"}}}}}}'
```

\* Verify:

```
oc get cronjob cron-test -o yaml | grep serviceAccountName
```

Notes:

\* The uploaded lab uses `oc set sa cronjob.batch/cron-test jupiter`, which is not the usual command form for CronJobs. Patching the pod template is the reliable method.

This task checks service account and privilege adjustments for scheduled workloads.

### NEW QUESTION # 32

Create a PV and PVC

Task information Details:

Create a PersistentVolume named landing-pv with 1Gi , ReadOnlyMany , NFS backend, and Retain reclaim policy.

Create a PersistentVolumeClaim named landing-pvc requesting 1Gi , ReadOnlyMany , and storage class nfs2 .

### Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

\* Create landing-pv.yaml:

```
apiVersion: v1
```

```
kind: PersistentVolume
```

```
metadata:
```

```
name: landing-pv
```

```
spec:
```

```
capacity:
```

```

storage: 1Gi
accessModes:
- ReadOnlyMany
nfs:
path: /open001
server: 192.168.2.2
persistentVolumeReclaimPolicy: Retain
* Apply it:
oc apply -f landing-pv.yaml
* Create landing-pvc.yaml:
apiVersion: v1
kind: PersistentVolumeClaim
metadata:
name: landing-pvc
spec:
accessModes:
- ReadOnlyMany
resources:
requests:
storage: 1Gi
storageClassName: nfs2
* Apply it:
oc apply -f landing-pvc.yaml
* Verify:
oc get pv
oc get pvc
oc describe pv landing-pv
oc describe pvc landing-pvc
This task validates persistent storage provisioning and claim binding concepts.

```

### NEW QUESTION # 33

Deploy Application in the Project QED

Task information Details:

Set the service account for the specified deployment in project qed to project1-sa .

#### Answer:

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

\* Ensure you are in the correct project:

```
oc project qed
```

\* Set the service account on the deployment:

```
oc set serviceaccount deployment/gitlab-skdjfklj project1-sa
```

\* Verify:

```
oc get deployment gitlab-skdjfklj -o yaml | grep serviceAccount
```

```
oc describe deployment gitlab-skdjfklj
```

\* If required, restart rollout:

```
oc rollout restart deployment/gitlab-skdjfklj
```

This task checks workload identity assignment through service accounts.

### NEW QUESTION # 34

Configure an application to use a secret

Configure the application called qed in the math project with the following requirements:

The application uses the secret previously created called: magic The secret defines an environment variable with name: DECODER\_RING The application output no longer displays: Sorry, application is not configured correctly.

**Answer:**

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

```
$ oc get all | grep deploy
```

```
$ oc set env --from=secret/magic deployment.apps/qed
```

**NEW QUESTION # 35**

Configure limits

Configure your OpenShift cluster to use limits in the bluebook project with the following requirements:

The name of the LimitRange resource is: ex280-limits

The amount of memory consumed by a single pod is between 5Mi and 300Mi The amount of memory consumed by a single container is between 5Mi and

300Mi with a default request value of 100Mi

The amount of CPU consumed by a single pod is between 10m and 500m

The amount of CPU consumed by a single container is between 10m and 500m with a default request value of 100m

**Answer:**

Explanation:

See the solution below in Explanation.

Explanation:

Solution:

```
$ vim limit.yaml
```

```
# Edit the yaml file like below mentioned
```

```
apiVersion: "v1" kind: "LimitRange" metadata:
```

```
name: "resource-limits" spec:
```

```
limits:
```

```
- type: "Pod"
```

```
max:
```

```
cpu: "500m" memory: "300Mi"
```

```
min:
```

```
cpu: "10m" memory: "5Mi"
```

```
- type: "Container" max:
```

```
cpu: "500m" memory: "300Mi"
```

```
min:
```

```
cpu: "10m" memory: "5Mi"
```

```
defaultRequest: cpu: "100m" memory: "100Mi"
```

```
$ oc create -f limit.yaml --save-config -n bluebook
```

```
$ oc describe limitranges -n bluebook
```

**NEW QUESTION # 36**

.....

Even the fierce competition cannot stop demanding needs from exam candidates. To get more specific information about our EX280 learning quiz, we are here to satisfy your wish with following details.
