## Pass 156-315.81 Test Guide - Real 156-315.81 Exam Questions

156-315.81 exam dumps have a higher pass rate than products in the same industry. If you want to pass 156-315.81 certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, 156-315.81 exam prep provides everything possible to ensure their success. The 99% pass rate is the proud result of our study materials. If you join, you will become one of the 99%. I believe that pass rate is also a big criterion for your choice of products, because your ultimate goal is to obtain 156-315.81

Certification. In 156-315.81 exam dumps, you can do it.

The Check Point Certified Security Expert (CCSE) R81 exam is a comprehensive evaluation of the knowledge, skills, and abilities of security professionals in deploying and managing Check Point Security solutions. 156-315.81 exam covers a wide range of topics, including network security architecture, implementation and management of security policies, user and authentication management, VPN implementation, and monitoring and troubleshooting network security issues. 156-315.81 Exam is designed to validate the knowledge and expertise of security professionals in the field of network security.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q224-Q229):

### NEW QUESTION # 224

What are types of Check Point APIs available currently as part of R81.20 code?

- A. Security Gateway API Management API, Threat Prevention API and Identity Awareness Web Services API
- **B. Management API, Threat Prevention API, Identity Awareness Web Services API and OPSEC SDK API**
- C. OSE API, OPSEC SDK API, Threat Extraction API and Policy Editor API
- D. CPMI API, Management API, Threat Prevention API and Identity Awareness Web Services API

**Answer: B**

Explanation:

Explanation

What are types of Check Point APIs available currently as part of R81.20 code?

The types of Check Point APIs available currently as part of R81.20 code are:

Management API: This API allows you to automate and orchestrate various management tasks, such as creating and modifying objects, installing policies, generating reports, etc. The Management API can be accessed via CLI, Web Services, or GUI clients.

Threat Prevention API: This API allows you to interact with the Threat Prevention software blades, such as Anti-Virus, Anti-Bot, Threat Emulation, etc. The Threat Prevention API can be used to query and update indicators, upload files for emulation, retrieve verdicts and reports, etc.

Identity Awareness Web Services API: This API allows you to integrate external identity sources with the Identity Awareness software blade, which provides identity-based access control for network traffic.

The Identity Awareness Web Services API can be used to send identity and session information to the Security Gateway, query identity information from the Security Gateway, etc.

OPSEC SDK API: This API allows you to develop custom applications that can communicate with Check Point products using the OPSEC protocol. The OPSEC SDK API supports various OPSEC services, such as LEA, CPMI, SAM, ELA, UFP, etc.

### NEW QUESTION # 225

To help SmartEvent determine whether events originated internally or externally you must define using the Initial Settings under General Settings in the Policy Tab. How many options are available to calculate the traffic direction?

- A. 2 Internal; External
- B. 5 Network; Host; Objects; Services; API
- **C. 4 Incoming; Outgoing; Internal; Other**
- D. 3 Incoming; Outgoing; Network

**Answer: C**

Explanation:

To help SmartEvent determine whether events originated internally or externally, you must define the traffic direction using the Initial Settings under General Settings in the Policy Tab. There are four options available to calculate the traffic direction: Incoming, Outgoing, Internal, and Other. Incoming means the source is external and the destination is internal. Outgoing means the source is internal and the destination is external. Internal means both the source and the destination are internal. Other means both the source and the destination are external. Reference: SmartEvent R81 Administration Guide

### NEW QUESTION # 226

The log server sends what to the Correlation Unit?

- **A. Logs**
- B. CPMI dbsync
- C. Authentication requests
- D. Event Policy

**Answer: A**

Explanation:

The log server sends logs to the Correlation Unit. The Correlation Unit analyzes the logs and generates events based on the event policy. The events are then sent to the SmartEvent Server, which displays them in the SmartEvent GUI. References: [SmartEvent Administration Guide]

#### NEW QUESTION # 227

How would you deploy TE250X Check Point appliance just for email traffic and in-line mode without a Check Point Security Gateway?

- A. It is not possible, always Check Point SGW is needed to forward emails to SandBlast appliance.
- B. Install appliance TE250X in standalone mode and setup MTA.
- **C. You can utilize only Check Point Cloud Services for this scenario.**
- D. Install appliance TE250X on SpanPort on LAN switch in MTA mode.

**Answer: C**

Explanation:

Explanation

To deploy a TE250X Check Point appliance just for email traffic and in-line mode without a Check Point Security Gateway, you can utilize Check Point Cloud Services. In this scenario, you can leverage cloud-based email security services provided by Check Point without the need for an on-premises Security Gateway.

Option C correctly states that you can use only Check Point Cloud Services for this scenario, making it the verified answer.

#### NEW QUESTION # 228

What is the recommended number of physical network interfaces in a Mobile Access cluster deployment?

- A. 4 Interfaces - an interface leading to the organization, a second interface leading to the internet, a third interface for synchronization, a fourth interface leading to the Security Management Server.
- **B. 3 Interfaces - an interface leading to the organization, a second interface leading to the Internet, a third interface for synchronization.**
- C. 1 Interface - an interface leading to the organization and the Internet, and configure for synchronization.
- D. 2 Interfaces - a data interface leading to the organization and the Internet, a second interface for synchronization.

**Answer: B**

Explanation:

According to the Check Point R81 Mobile Access Administration Guide, the recommended number of physical network interfaces in a Mobile Access cluster deployment is three. One interface should be connected to the organization network, one interface should be connected to the Internet, and one interface should be used for synchronization between cluster members. This configuration provides optimal performance and security for Mobile Access traffic.
