## Reliable EMEA-Advanced-Support Test Notes & Valid Test EMEA-Advanced-Support Fee

The top Fortinet EMEA-Advanced-Support certification benefits are proven skills, more career opportunities, an increase in salary, instant promotion, and membership in professional community groups. Surely all these EMEA-Advanced-Support certification benefits are immediately available after passing the Fortinet EMEA-Advanced-Support Certification Exam. To do this you just need to pass the EMEA-Advanced-Support certification exam which is not easy to pass.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q31-Q36):

### NEW QUESTION # 31

In Active FTP who sends the PORT command?

- A. The FTP Server
- **B. The FTP Client**
- C. There is no PORT command in Active FTP
- D. Both

**Answer: B**

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

### NEW QUESTION # 32

In FortiGate, what is the purpose of the 'set webfilter-profile' command in a firewall policy?

- A. Sets the web server authentication profile
- B. Configures the web proxy settings
- C. Enables deep packet inspection for web traffic
- **D. Applies a web filtering profile to block or allow URLs**

**Answer: D**

Explanation:

The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, enabling URL blocking or allowing based on categories or specific URLs. It does not enable DPI (B), configure proxies (C), or set authentication (D). Exact extract: "The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, controlling access to websites based on URL categories or specific URLs."

### NEW QUESTION # 33

Firewall is performing stateful inspection for TCP traffic between Client 10.0.0.21 and Server 172.16.1.200.

- A. Traffic should be allowed
- B. The ACK was not supposed to be sent to client 10.0.0.21
- C. Traffic is Asymmetric and not allowed by the Firewall
- **D. Three way handshake was not completed**

**Answer: D**

Explanation:

Stateful inspection requires a complete TCP three-way handshake (SYN, SYN-ACK, ACK) to establish a session in the firewall's state table. If the handshake is incomplete (e.g., missing ACK), the session is not established, and traffic is dropped. The question implies a stateful firewall scenario where traffic is blocked, likely due to an incomplete handshake. Asymmetric traffic (B) or incorrect ACK (A) are not indicated without further context, and C is incorrect if the handshake fails. Exact extract: "Stateful inspection ensures that a TCP three-way handshake is completed before allowing traffic... If the handshake is not completed, FortiGate drops the packets as invalid."

### NEW QUESTION # 34

In FortiGate, what is the purpose of a Virtual IP (VIP)?

- A. To create a virtual interface for VLANs
- B. To enable load balancing for VPN tunnels
- **C. To map an external IP to an internal IP for NAT**
- D. To assign a secondary IP to a physical interface

**Answer: C**

Explanation:

A Virtual IP (VIP) in FortiGate maps an external IP address to an internal IP for Destination NAT (DNAT), commonly used for accessing internal servers from external networks. It is not for VLANs (B), secondary IPs (C), or VPN load balancing (D). Exact extract: "Virtual IPs (VIPs) are used for Destination NAT, mapping an external IP address to an internal IP to allow external access to internal resources, such as servers."

### NEW QUESTION # 35

Which FortiGate feature mitigates DDoS attacks by limiting the rate of incoming connections?

- A. Web Filtering
- B. Application Control
- C. IPS Signature
- **D. DoS Policy**

**Answer: D**

Explanation:

FortiGate's DoS (Denial of Service) Policy limits the rate of incoming connections or packets to mitigate DDoS attacks, such as SYN floods, by setting thresholds for specific traffic types. IPS Signatures (B) detect specific attack patterns, Application Control (C) manages app usage, and Web Filtering (D) blocks URLs, none of which focus on rate limiting. Exact extract: "DoS policies protect against DDoS attacks by limiting the rate of incoming connections or packets, such as SYN floods, based on configured thresholds."

### NEW QUESTION # 36

.....

Our EMEA-Advanced-Support latest exam torrents are your best choice. I promise you that you can learn from the EMEA-Advanced-Support exam questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately. Our EMEA-Advanced-Support exam questions just need students to spend 20 to 30 hours practicing on the platform which provides simulation problems, can let them have the confidence to pass the EMEA-Advanced-Support Exam, so little time great convenience for some workers, how efficiency it is.
