The VMware 2V0-16.25 certification is one of the top-rated career advancement certifications in the market. This VMware vSphere Foundation 9.0 Administrator (2V0-16.25) certification exam has been inspiring candidates since its beginning. Over this long time period, thousands of 2V0-16.25 Exam candidates have passed their VMware vSphere Foundation 9.0 Administrator (2V0-16.25) certification exam and now they are doing jobs in the world's top brands. You can also be a part of this wonderful community.

2V0-16.25 study material applies to all types of candidates. Buying a set of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require users to have a lot of study time, which is difficult for office workers. However, 2V0-16.25 Study Material is to help students improve their test scores by improving their learning efficiency. Therefore, users can pass exams with very little learning time.

Guide 2V0-16.25 Torrent | 2V0-16.25 Detailed Study Plan

The experts in our company have been focusing on the 2V0-16.25 examination for a long time and they never overlook any new knowledge. The content of our 2V0-16.25 study materials has always been kept up to date. Don't worry if any new information comes out after your purchase of our 2V0-16.25 Practice Braindumps. We will inform you by E-mail when we have a new version and send it to you right away. So as long as you buy our 2V0-16.25 learning guide, you can always have the latest exam questions and answers.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

Topic 2	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 3	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 4	<ul style="list-style-type: none"> • Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 5	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28

An administrator is tasked to create a new VMware vSAN cluster. The following information was provided to the administrator:

- * Should host high performance application.
- * Workload is latency dependent.
- * Workload, compute and storage must be in the vSAN cluster.

Which configuration should the administrator choose for this vSAN cluster?

- A. vSAN Original Storage Architecture (OSA)
- B. vSAN Original Storage Architecture (OSA) Stretched Cluster
- **C. vSAN Express Storage Architecture (ESA)**
- D. vSAN Storage Cluster

Answer: C

Explanation:

The workload requirements specify:

- * High-performance application
- * Latency-dependent workloads
- * Compute and storage must reside in the vSAN cluster

The correct option is vSAN Express Storage Architecture (ESA) because:

- * ESA is designed for high-performance, low-latency applications.
- * It leverages NVMe-based storage devices and 25GbE networking, delivering better IOPS and reduced latency compared to OSA.
- * OSA (Original Storage Architecture) is older and less efficient.
- * OSA Stretched Cluster (A) is for resilience across sites, not specifically performance.
- * vSAN Storage Cluster (B) is a generic term and not specific.

NEW QUESTION # 29

Which VMware Cloud Foundation (VCF) Operations capability enables monitoring and optimization of a VMware vSphere Foundation (VVF) environment?

- A. Log Insight Integration
- B. Infrastructure Visibility
- C. Capacity Analytics
- D. Intelligent Alerts

Answer: C

Explanation:

The capability in VMware Cloud Foundation (VCF) Operations that directly enables monitoring and optimization of a VMware vSphere Foundation (VVF) environment is Capacity Analytics.

* Capacity Analytics provides real-time and predictive insights into resource utilization, capacity forecasting, and optimization.

* It analyzes historical and real-time utilization data to predict future workload demands, enabling administrators to proactively plan expansions or right-size workloads.

* This includes what-if scenario modeling, workload optimization, and resource reclamation to ensure workloads are efficiently placed, avoiding bottlenecks and waste.

Why not the other options?

* A. Intelligent Alerts# Provides proactive alerts and recommendations but is more focused on issue detection and notification, not optimization.

* C. Log Insight Integration# Enables log analysis and troubleshooting, not capacity optimization.

* D. Infrastructure Visibility# Provides monitoring and observability but does not perform predictive optimization.

NEW QUESTION # 30

Which component of VMware vSphere Foundation (VVF) is essential for supporting containerized workloads within the vSphere environment?

- A. VCF Fleet Manager
- B. VCF Automation
- C. VCF Operations
- D. vSphere Kubernetes Service

Answer: D

Explanation:

To support containerized workloads within VMware vSphere Foundation (VVF), the essential component is vSphere Kubernetes Service (vSphere with Tanzu).

* Provides native Kubernetes integration with vSphere clusters.

* Enables running Pods, Tanzu Kubernetes clusters, and containerized workload on vSphere infrastructure.

Other options:

* VCF Automation (A): Automates VCF lifecycle but not containers.

* VCF Fleet Manager (B): Manages multi-instance environments, not workload containers.

* VCF Operations (C): Provides monitoring/analytics but not container runtime.

NEW QUESTION # 31

What is the benefit of enabling lockdown mode on VMware ESX hosts?

- A. Simplifies the management of virtual machines.

- B. Restricts direct access to the ESX host, enhancing security.
- C. Increases CPU and memory resources available to virtual machines (VMs).
- D. Improves network performance.

Answer: B

Explanation:

Lockdown Mode on ESXi hosts is a security feature that restricts direct login to the ESXi host.

* Once enabled, administrators must manage the host through vCenter Server instead of direct DCUI/SSH access (except for exception users).

* This prevents unauthorized local access and improves overall security compliance.

Other options:

* A. Improves network performance# Not related.

* C. Increases CPU/memory for VMs# Not related.

* D. Simplifies VM management# It actually makes direct management more restricted.

NEW QUESTION # 32

An administrator is tasked to create a new storage policy for an eight-node VMware vSAN Original Storage Architecture (OSA) cluster.

The following specifications have been provided:

* Tolerate up to two host failures.

* Ensure maximum usable capacity.

Which storage policy settings must the administrator configure?

- A. 2 failures - RAID-5
- B. 1 failure - RAID-1
- C. 1 failure - RAID-5
- D. 3 failures - RAID-1

Answer: A

Explanation:

For an 8-node vSAN OSA cluster, the administrator needs a storage policy that:

* Tolerates 2 host failures, and

* Provides maximum usable capacity.

* RAID-5/6 (erasure coding) is more capacity-efficient than RAID-1 mirroring.

* To tolerate 2 failures, the correct policy is RAID-5 with FTT=2.

* RAID-1 (mirroring) would consume far more capacity, reducing usable space.

Other options:

* A. 1 failure - RAID-1# Only tolerates one failure.

* C. 3 failures - RAID-1# Provides higher resilience but uses much more capacity, not maximum efficiency.

* D. 1 failure - RAID-5# Tolerates only one failure.
