## Reliable C\_CPI\_2506 Practice Questions: 2026 SAP Realistic Reliable SAP Certified Associate - Integration Developer Practice Questions Pass Guaranteed

The PassReview is one of the top-rated and trusted platforms that are committed to making the SAP Certified Associate - Integration Developer (C\_CPI\_2506) certification exam journey successful. To achieve this objective PassReview has hired a team of experienced and qualified C\_CPI\_2506 Exam trainers. They work together and put all their expertise to maintain the top standard of SAP C\_CPI\_2506 practice test all the time.

### SAP C\_CPI\_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>SAP Event Mesh:</b> This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Implementing Cloud Integration:</b> This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li> </ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Location ID
- B. Host
- C. Connector ID
- D. Subaccount ID

**Answer: A**

Explanation:

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

### NEW QUESTION # 44

Which of the following does SAP Graph provide?

- A. Unified cache of SAP-managed business data
- B. Abstraction of business data for end users
- C. Unified view of SAP-managed business data

**Answer: C**

Explanation:

SAP Graph provides a unified API layer that offers a business-centric, semantically harmonized view of SAP-managed data across multiple SAP solutions (e.g., S/4HANA, SuccessFactors, Ariba).

It does not cache data; instead, it provides real-time access.

It is not only an abstraction for end users, but specifically designed as a unified view for developers and applications.

Thus, the correct answer is Unified view of SAP-managed business data.

### NEW QUESTION # 45

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Integration processes can be developed offline.
- B. Customer-to-Customer (C2C) integrations can be developed.
- C. Predefined scenarios can be used out-of-the-box.
- D. A local installation is not required.

**Answer: C,D**

Explanation:

Advantages of Cloud Integration capability in SAP Integration Suite:

Predefined scenarios # SAP delivers integration content packages (iFlows) that can be used directly.

No local installation # It runs as a cloud service, no on-premise setup required.

Other options:

Offline development is not supported (development happens in Web UI).

Customer-to-Customer (C2C) integrations are not a standard positioning; it's mainly B2B, B2G, and SAP-to-3rd-party scenarios.

So, correct advantages are out-of-the-box scenarios and no local installation required.

#### **NEW QUESTION # 46**

What are target endpoints of an API? Note: There are 3 correct answers to this question.

- A. URL of original API
- B. API proxy
- C. API consumer
- D. API provider
- E. Resources

**Answer: A,B,D**

Explanation:

The target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

#### **NEW QUESTION # 47**

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Attachment
- B. Message body
- C. Message header
- D. Exchange property

**Answer: C**

Explanation:

To use an API key for authentication in an HTTPS API call, you must include the API key in the message header of the content modifier step. The message header contains information related to the message, such as addressing, routing, or metadata. You can use the content modifier step to create or modify message headers using expressions or constants. The API key is typically passed as a value of a specific header field, such as Authorization or X-API-Key, depending on the API provider's requirements. You can use the Camel Simple Expression Language to access or construct the API key value from variables, properties, or system information. Reference: Content Modifier | SAP Help Portal, Using Camel Simple Expression Language | SAP Help Portal
