All operating systems (Mac, Linus, Android, iOS, Windows) and major browsers support the 156-582 web-based practice exam.

CheckPoint 156-582 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting Application Control & URL Filtering: This section of the exam measures the skills of the target audience in covering troubleshooting related to application control and URL filtering features.
Topic 2	• Autonomous Threat Prevention Troubleshooting: This section of the exam measures the skills of Check Point security administrators and covers troubleshooting techniques for autonomous threat prevention systems. It emphasizes understanding threat detection mechanisms and response actions.
Topic 3	• Introduction to Troubleshooting: This section of the exam measures the skills of Check Point security administrators and covers the foundational concepts of troubleshooting within network security environments. It introduces the principles and methodologies used to identify and resolve issues effectively. A key skill assessed is the ability to apply systematic approaches to diagnose problems.
Topic 4	• Basic Site-to-Site VPN Troubleshooting: This section of the exam measures the skills of Check Point security administrators and covers foundational troubleshooting techniques for site-to-site VPN connections. It includes diagnosing connectivity issues and verifying configuration settings.
Topic 5	• Troubleshooting SmartConsole: This section of the exam measures the skills of Check Point security professionals and covers troubleshooting techniques specific to SmartConsole, the management interface for Check Point products.
Topic 6	• Troubleshooting NAT: This section of the exam measures the skills of Check Point security administrators and covers troubleshooting Network Address Translation (NAT) configurations. It emphasizes understanding NAT rules, translations, and common pitfalls.

CheckPoint Check Point Certified Troubleshooting Administrator - R81.20 Sample Questions (Q68-Q73):

NEW QUESTION # 68
Which of the following CLI commands is best to use for getting a quick look at appliance performance information in Gaia?

- A. fw monitor
- B. cphaprob stat
- C. fw stat
- D. cpview

Answer: D

Explanation:
The cpview command in Gaia provides a real-time, comprehensive view of the system's performance metrics, including CPU usage, memory utilization, and network statistics. This makes it the best choice for quickly assessing the performance of a Check Point appliance. Other commands like fw stat and fw monitor are more focused on firewall statistics and traffic monitoring, respectively. cphaprob stat is used for High Availability status checks, not general performance metrics.

NEW QUESTION # 69

You need to verify the license on Security Gateway. What command can you use from the command line?

- A. cplic -I
- B. cplic print
- C. cplic list
- D. sh lic stat

Answer: B

Explanation:
To verify the license on a Security Gateway, thecplic printcommand is used. This command displays the current licensing information, including the status and details of installed licenses, ensuring that the gateway has the necessary permissions and features enabled for its operation.

NEW QUESTION # 70
What are some measures you can take to prevent IPS false positives?

- A. Exclude problematic services from being protected by IPS (sip, H.323, etc.)
- B. Use IPS only in Detect mode
- C. Capture packets, Update the IPS database, and Back up custom IPS files
- D. Use Recommended IPS profile

Answer: D

Explanation:
To preventfalse positivesin IPS, using theRecommended IPS profileis an effective measure. This profile is optimized based on best practices and the latest threat intelligence, reducing the likelihood of legitimate traffic being mistakenly identified as malicious. While other options like capturing packets and updating the IPS database are also important, adhering to recommended profiles ensures a balanced and accurate detection mechanism.

NEW QUESTION # 71
After reviewing the Install Policy report and error codes listed in it, you need to check if the policy installation port is open on the Security Gateway. What is the correct port to check?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Port18191is used by Check Point for communication between the Security Management Server and the Security Gateway during policy installations. Ensuring that this port is open and not blocked by any firewall rules is crucial for successful policy deployment. Other ports listed serve different functions within the Check Point ecosystem.

NEW QUESTION # 72
You want to work with a license for your gateway in User Center portal, but all options are greyed out.
What is the reason?

- A. Your account has classification permission to Viewer
- B. Your account has classification permission to Licenser
- C. Your account does not have any rights
- D. You are not defined as Support Contact

Answer: D

Explanation:

When all licensing options are greyed out in the User Center portal, it typically indicates that the user does not have the necessary permissions to manage licenses. Specifically, the user might not be defined as a Support Contact, which is required to perform licensing actions. Being a Viewer or Licenser does not grant full access to manage licenses, and having no rights would also restrict access, but the most precise reason in this context is the lack of a Support Contact definition.

NEW QUESTION # 73

......
