Plat-Dev-210 Reliable Test Answers, Plat-Dev-210 Latest Learning Materials

If you have the certification for the exam, your competitive force and wage will be improved in your company. Plat-Dev-210 exam cram can help you pass the exam and obtain the corresponding certification successfully. We have a professional team to collect and research the latest information for the exam, and you can know the latest information if you choose us. We offer you free update for 365 days for Plat-Dev-210 Exam Dumps, and our system will send you the latest version automatically. You can receive the downloading link and password for Plat-Dev-210 exam dumps within ten minutes after payment.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

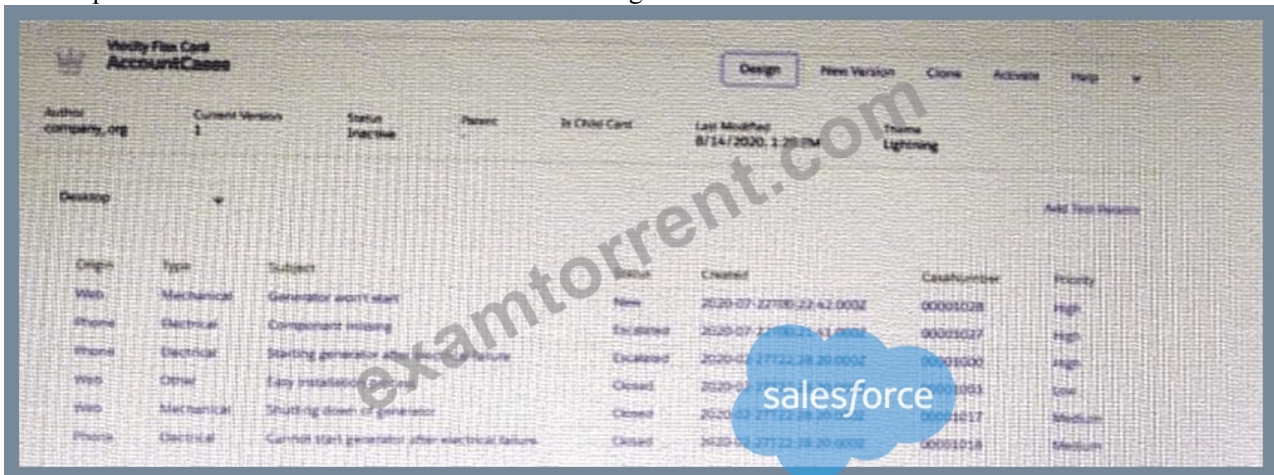

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.
Topic 2	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 3	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 4	<ul style="list-style-type: none"> • Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.

Salesforce Certified Omnistudio Developer Sample Questions (Q47-Q52):

NEW QUESTION # 47

A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.

How can the developer configure the FlexCard to display the case records in this way?

- A. Enable the Repeat Records feature on the FlexCard Setup tab
- B. Disable the Repeat Record feature on the FlexCard setup tab
- C. Enable the record Looping feature on the data table elements
- **D. Select the Repeatable Mode property on the data table elements**

Answer: D

Explanation:

The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

NEW QUESTION # 48

Refer to the exhibit below. In this Integration Procedure structure, what Send JSON Path would you use to send the output of the ActionZ element to a Response Action?

- A. ActionZ:BlockY:BlockX
- B. ActionZ:BlockY:BlockX
- C. BlockX.BlockY.ActionZ
- D. BlockX:BlockY:ActionAZ

Answer: C

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.

ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom.

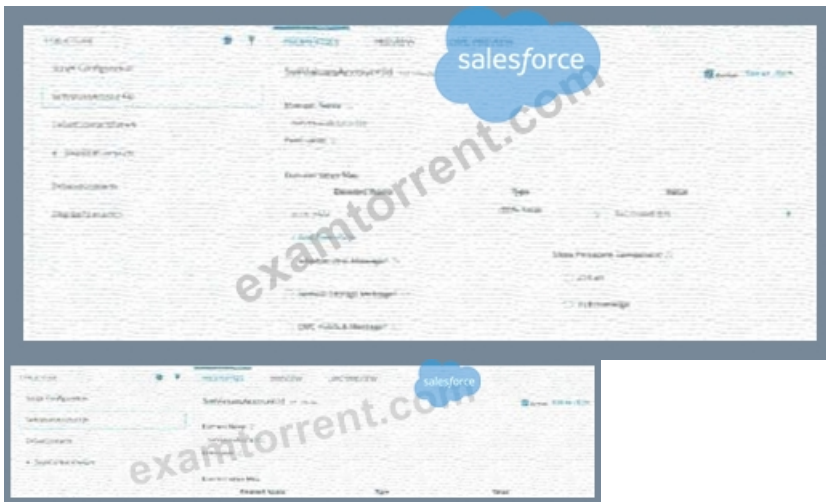

NEW QUESTION # 49

A customer sets up to LWC Omniscripts, one embedded into another. Account is set in a Set Values element in the parent Omniscript.

The AccountId set in the parent Omniscript is used to another Set Values element ContextAccountid in the embedded OmniScript. The embedded Omniscript is activated.

While previewing the OmniScript flow from the parent, it is found that Account is set correctly in the parent OmniScript. However, ContextAccountId in the embedded OmniScript is not set with the AccountId from parent Omniscript. On previewing the embedded OmniScript individually, it is found that ContextAccountId is set correctly.

What is the reason for this? Refer to the exhibit below.

- A. A developer failed to include a Navigation Element to pass data from the parent OmniScript.
- B. The flag pass Data JSON in the parent OmniScript in not configured correctly.
- C. Both parent and embedded OmniScripts have the same element name for the Set values element.
- D. The LWC PubSub Message flag in the Set Values action of the parent has not been set.

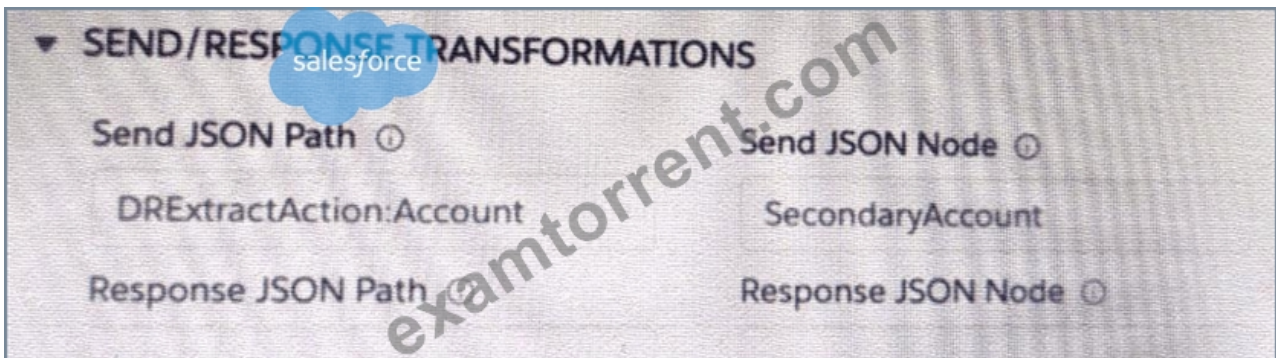

Answer: A

Explanation:

The LWC PubSub Message flag in the Set Values action of the parent OmniScript enables the parent OmniScript to send data to the embedded OmniScript using a custom event. If this flag is not set, the data will not be passed to the embedded OmniScript.

NEW QUESTION # 50

Refer to the exhibit.

A developer has configured an integration Procedure element with SEND/RESPONSE TRANSFORMATIONS as shown. Alternatively, how could the developer configure Additional input to send exactly the same data? Assume that the developer checked Send Only Additional input.

- A.

- B.

- C.

Answer: C

Explanation:

Option C is the correct way to configure Additional input to send exactly the same data as Input Data. The Additional input should

have a key/value pair for each field in Input Data, and the value should be set to `{{InputData.field}}` for each field. This will pass the value of Input Data for each field to Additional input.

NEW QUESTION # 51

A developer is building a DataRaptor Load for an Integrate Procedure used in an OmniScript. Based on best practices, how should the developer configure the Input JSON?

- A. Copy the Input JSON from the OmniScript `{Data}` modal.
- B. Build the Input JSON node by node in the DataRaptor Designer.
- C. Copy the Input JSON from the DataRaptor Action Debug node.
- D. Build the Input JSON node by node in an editor.

Answer: A

Explanation:

The best practice for configuring the Input JSON for a DataRaptor Load is to copy the Input JSON from the OmniScript `{Data}` modal. This ensures that the Input JSON matches the data structure and format of the OmniScript data. The DataRaptor Action Debug node may not have the same data as the OmniScript data, and building the Input JSON node by node in an editor or in the DataRaptor Designer may introduce errors or inconsistencies.

NEW QUESTION # 52

.....

I can assure you that we will provide considerate on line after sale service for you in twenty four hours a day, seven days a week. Therefore, after buying our Plat-Dev-210 study guide, if you have any questions about our Plat-Dev-210 study materials, please just feel free to contact with our online after sale service staffs.
