EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

Question:

An organization wants to consume compute, network, and storage resources through a self-service portal. Which cloud service model provides this capability?

- **A. Infrastructure as a Service**
- B. Data as a Service
- C. Software as a Service
- D. Platform as a Service

Answer: A

Explanation:

Infrastructure as a Service (IaaS) is a cloud computing model that provides virtualized computing resources over the internet. It offers fundamental infrastructure services such as compute, storage, and networking, which users can provision and manage through a self-service portal. This model allows organizations to scale resources as needed and pay only for what they use.

NEW QUESTION # 14

Question:

Which RAID level consists of two disk drives and every write is written to both disks?

- A. RAID 6
- B. RAID 5
- **C. RAID 1**
- D. RAID 1+0

Answer: C

Explanation:

RAID 1 is disk mirroring. It writes identical copies of data to two disks simultaneously, providing redundancy.

* Minimum of 2 disks (no parity, no striping).

* Excellent read performance, write performance equivalent to a single disk.

* Provides fault tolerance because data is duplicated.

NEW QUESTION # 15

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Avoids security risks that expose business data
- B. Reduces the cost of protecting data
- C. Reduces required maintenance time for IT resources
- **D. Maximizes application and information availability**

Answer: D

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

* Local failures (disk, server, or site outages)

* Natural disasters (floods, fires)

* Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Information Availability Techniques.

NEW QUESTION # 16

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup

data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- **A. IP packet segmentation**
- B. FCIP gateway FC ports set to TE_Port mode
- C. FCIP gateway FC ports set to EX_Port mode
- D. Ethernet frame segmentation

Answer: A

Explanation:

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

* TE_Port mode is used for trunking, not related to packet fragmentation.

* EX_Port mode is used for inter-switch connectivity (FCR).

* Ethernet frame segmentation is not relevant in FCIP tunneling.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: FCIP and IP WAN Connectivity.

NEW QUESTION # 17

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Avoids security risks that expose business data
- B. Reduces the cost of protecting data
- C. Reduces required maintenance time for IT resources
- **D. Maximizes application and information availability**

Answer: D

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:
