In recent years, some changes are taking place in this line about the new points are being constantly tested in the Adobe Real-Time CDP Business Practitioner Professional real exam. So our experts highlight the new type of AD0-E605 questions and add updates into the practice materials, and look for shifts closely when they take place. As to the rapid changes happened in this AD0-E605 Exam, experts will fix them and we assure your AD0-E605 exam simulation you are looking at now are the newest version. And we only sell the latest AD0-E605 exam questions and answers.

### Adobe Real-Time CDP Business Practitioner Professional Sample Questions (Q61-Q66):

#### NEW QUESTION # 61

A healthcare client plans to send data from a wearable device using the Edge data ingestion capability of Adobe Experience Platform. The data architect of the client has created a schema that includes fields labeled as sensitive. If a Datastream is created that is associated with the mentioned schema above, what are the services that can be added to the Datastream?

- A. Any HIPAA-ready or non-HIPAA-ready services that can be configured in a Datastream
- B. Only Adobe services like Adobe Experience Platform, Adobe Analytics, Adobe Target, Adobe Audience Manager, etc.
- C. Adobe Experience Platform and non-HIPAA-ready Event Forwarding service
- D. Only HIPAA-ready services like Adobe Experience Platform

**Answer: D**

#### NEW QUESTION # 62

A healthcare client plans to send data from a wearable device using the Edge data ingestion capability of Adobe Experience Platform. The data architect of the client has created a schema that includes fields labeled as sensitive. If a Datastream is created that is associated with the mentioned schema above, what are the services that can be added to the Datastream?

- A. Any HIPAA-ready or non-HIPAA-ready services that can be configured in a Datastream
- B. Only Adobe services like Adobe Experience Platform, Adobe Analytics, Adobe Target, Adobe Audience Manager, etc.
- C. Adobe Experience Platform and non-HIPAA-ready Event Forwarding service
- D. Only HIPAA-ready services like Adobe Experience Platform

**Answer: D**

Explanation:

In Adobe Experience Platform, data governance and compliance are enforced through the use of Data Usage Labeling and Enforcement (DULE). For healthcare organizations handling Protected Health Information (PHI), the platform requires strict adherence to HIPAA compliance standards. When a schema contains fields labeled as sensitive (such as those associated with HIPAA-regulated data), the Datastream configuration is restricted by the system's governance guardrails. Specifically, if a schema is part of a healthcare-related implementation where PHI is present, you can only enable HIPAA-ready services within the Datastream. As of the latest Adobe documentation, Adobe Experience Platform (which includes Real-Time CDP) is a HIPAA-ready service when configured within a compliant organization. Other services like Adobe Analytics or standard Adobe Target are not inherently HIPAA-ready in all configurations and may be blocked from receiving data from a sensitive-labeled schema to prevent data leakage into non-compliant environments.

Options A and D are incorrect because they suggest that non-HIPAA-ready services (like standard Event Forwarding) could coexist with sensitive data, which would violate the compliance boundary. Option B is incorrect as it includes legacy services that do not meet the stringent encryption and access control requirements for PHI. By restricting the Datastream to HIPAA-ready services, Adobe ensures that sensitive health data is only processed within environments that have the necessary technical and administrative safeguards in place.

#### NEW QUESTION # 63

A marketing firm wants to create an audience for their new campaign focusing on repeat customers. What should they use in Adobe

Real-Time CDP to build this audience segment considering recency and frequency of the customer visits?

- A. Compose Audience using customer profiles from Adobe Analytics
- **B. Create a rule-based Audience with frequency and recency conditions**
- C. Compose Audience using offline customer relationship management CRM data
- D. Import Audience from Adobe Target

**Answer: B**

Explanation:

To target "repeat customers" based on specific behavioral metrics like recency and frequency, the most effective and native approach within Adobe Real-Time CDP is to use the Segment Builder to create a rule-based Audience.

Adobe's Segment Builder provides built-in aggregation functions that allow marketers to define these parameters precisely.

For frequency, the marketer can drag an "ExperienceEvent" (such as a website visit or purchase) into the canvas and set a condition such as "At least 3 times." For recency, they can apply a time filter to that same event, such as "in the last 30 days." Combining these results in a dynamic audience that automatically updates as users meet the criteria.

Option A and D are incorrect because they rely on external silos; while AEP can ingest data from Analytics and Target, the goal of the CDP is to build these audiences centrally on the unified profile rather than just

"composing" from a single source. Option C is insufficient because CRM data often lacks the real-time "visit" granularity (clickstream) needed to calculate recency/frequency accurately. By using a rule-based approach within the platform, the marketing firm can leverage the full power of the Real-Time Customer Profile, combining online and offline signals to identify the most active repeat customers across all touchpoints.

#### NEW QUESTION # 64

What are benefits of using the Identity Graph in Adobe RT-CDP? (Select two.)

- A. Enhances manual identity mapping workflows.
- B. Prevents unification of structured and unstructured data.
- **C. Resolves multiple identifiers into a single customer profile.**
- **D. Enables probabilistic and deterministic identity resolution.**

**Answer: C,D**

#### NEW QUESTION # 65

A data architect is building an XDM Experience Event Schema for loading event data from the Adobe Experience Platform (AEP) Web SDK. The data is intended to be used in the Real-Time customer profile and requires a primary identity to be present in the schema. The architect wants to be able to store both ambiguous and authenticated web data.

Does the data architect need to select a field as a primary identity?

- **A. No, the primary identity will already be in the identity map.**
- B. Yes, the architect will select a field from the schema and mark it as primary.
- C. No, a field on the schema will automatically be marked.
- D. Yes, the architect will select the identity map and mark it as primary.

**Answer: A**

#### NEW QUESTION # 66

.....

The language in our AD0-E605 test guide is easy to understand that will make any learner without any learning disabilities, whether you are a student or a in-service staff, whether you are a novice or an experienced staff who has abundant experience for many years. Our AD0-E605 Exam Questions are applicable for everyone in all walks of life which is not depends on your educated level. Therefore, it should be a great wonderful idea to choose our AD0-E605 guide torrent for sailing through the difficult test and pass it.
