The competition in today's society is the competition of talents. Can you survive and be invincible in a highly competitive society? Can you gain a foothold in such a complex society? If your answer is "no", that is because your ability is not strong enough. Our SCP-NPM test braindumps can help you improve your abilities. Once you choose our learning materials, your dream that you have always been eager to get SolarWinds certification which can prove your abilities will realized. You will have more competitive advantages than others to find a job that is decent. We are convinced that our SCP-NPM Exam Questions can help you gain the desired social status and thus embrace success.

In order to gain the certification quickly, people have bought a lot of study materials, but they also find that these materials don't suitable for them and also cannot help them. If you also don't find the suitable SCP-NPM test guide, we are willing to recommend that you should use our study materials. Because our products will help you solve the problem, it will never let you down if you decide to purchase and practice our SCP-NPM latest question.

## Real SolarWinds SCP-NPM Exam Questions [2026] - Secret To Pass Exam In First Attempt

Once you have any questions about our SCP-NPM actual exam, you can contact our staff online or send us an email. We have a dedicated all-day online service to help you solve problems. Before purchasing, you may be confused about what kind of SCP-NPM Guide questions you need. You can consult our staff online. After the consultation, your doubts will be solved and you will choose the SCP-NPM learning materials that suit you.

## SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q25-Q30):

### NEW QUESTION # 25

You use NPM to monitor a set of physical servers. The server team decides to virtualize these servers using VMware. Which part of your virtual infrastructure will NPM no longer be able to monitor?

- A. Virtualization host and VM performance metrics
- **B. VM sprawl monitoring**
- C. Virtualization host hardware health
- D. Virtualization environment tree

**Answer: B**

Explanation:

[https://support.solarwinds.com/SuccessCenter/s/article/VMAN-and-IVIM-feature-comparison?language=en\\_US](https://support.solarwinds.com/SuccessCenter/s/article/VMAN-and-IVIM-feature-comparison?language=en_US)

#### NEW QUESTION # 26

You want to create an Orion Map that shows the connections between your on-site devices and your servers in the Cloud. You can see the connections between all of the devices on site, but do not have visibility to the connections to your cloud servers.

How do you resolve this?

- A. Increase the polling intervals between Orion and the cloud servers
- B. Switch to SNMP polling for all devices to show the connections between on site and cloud resources
- C. Open additional firewall ports between the cloud servers and the on-site devices
- **D. Manually configure connections between onsite and cloud resources in Orion Maps**

**Answer: D**

Explanation:

Orion Maps can automatically display the connections between the devices that are monitored by NPM, based on topology data, manual dependencies, or application dependency mapping. However, if some of the devices are not monitored by NPM, or the connections are not detected by any of these methods, you can manually configure the connections between them in Orion Maps. To do this, you need to drag and drop the desired devices from the Entity Library to the map canvas, and then use the Connect tool to draw lines between them. You can also edit the connection properties, such as name, type, and status, to customize the appearance and behavior of the connections. Reference: Create and edit Intelligent Maps, Connect objects on maps manually, Intelligent Maps for SolarWinds Platform products

#### NEW QUESTION # 27

You're troubleshooting a complex network issue and need to build a comparison of several metrics across multiple devices and SolarWinds products to identify the problem. What feature can you use?

- A. AppStack
- B. NetPath
- C. Network Insight
- **D. PerfStack**

**Answer: D**

Explanation:

PerfStack is a feature of the Orion Platform that allows you to compare and correlate performance data from multiple SolarWinds products and entities in a single view<sup>1</sup>. You can drag and drop metrics from different sources, such as NPM, SAM, NCM, NTA, and more, and create custom dashboards that help you troubleshoot complex network issues<sup>2</sup>. PerfStack can also show historical data and baselines for comparison<sup>3</sup>. Reference: 1: Network Performance Monitor Administrator Guide - Use PerfStack to troubleshoot issues 2: Network Performance Monitor Getting Started Guide - Troubleshoot your network with PerfStack 3: SolarWinds Certified Professional Program - Diagnostics and Troubleshooting Exam Study Guide - Use PerfStack to troubleshoot issues

#### NEW QUESTION # 28

What is required of your nodes to detect duplex mismatches? (Choose all that apply.)

- A. Ensure corresponding values for each interface are different
- **B. Unify the duplex mode configuration on neighboring interfaces**
- **C. The nodes must support topology and be interconnected**
- **D. Duplex of both devices must be identified as full or half**

**Answer: B,C,D**

Explanation:

To detect duplex mismatches, you need to meet the following requirements<sup>1</sup>:

The nodes must be monitored by NPM.

The nodes must be in the up state during the discovery.

The nodes must support topology and be interconnected.

Duplex of both devices must be identified as full or half.

The Possible Duplex Mismatches widget must be enabled on the node details view.

You do not need to ensure corresponding values for each interface are different, as this is the result of a duplex mismatch, not a requirement for detection. In fact, you should unify the duplex mode configuration on neighboring interfaces to avoid mismatches<sup>1</sup>.

#### NEW QUESTION # 29

You run a Network Discovery and discover devices that you do not want to monitor. What feature can you use to exclude those devices from future discoveries?

- A. Discovery Ignore List
- B. Discovery Trash List
- C. Discovery White List
- D. Discovery Watch List

**Answer: A**

Explanation:

The Discovery Ignore List is a feature that allows you to specify the IP addresses or hostnames of the devices that you do not want to monitor or discover in the future. You can add devices to the ignore list manually or automatically during the discovery process. Once a device is added to the ignore list, it will be skipped by any subsequent discovery. You can also remove devices from the ignore list if you change your mind and want to monitor them later. References: Add devices to the Discovery Ignore List in NPM, Remove devices from the Discovery Ignore List in NPM, How to View Devices on Your Windows Network and What to Do If You Can't See Them

#### NEW QUESTION # 30

.....

Unlike many other learning materials, our SolarWinds Network Performance Monitor (NPM) Exam guide torrent is specially designed to help people pass the exam in a more productive and time-saving way. On the other hand, SCP-NPM exam study materials are aimed to help users make best use of their sporadic time by adopting flexible and safe study access. People always tend to neglect the great power of accumulation, thus the SCP-NPM Certification guide can not only benefit one's learning process but also help people develop a good habit of preventing delays. Our SCP-NPM exam questions will help you obtain the certification.
