AZ-800試験勉強攻略、AZ-800日本語サンプル

AZ-800学習クイズの最も注目すべき機能は、簡単かつ簡単に試験のポイントを学習し、認定コースの概要のコア情報を習得するのに役立つ最も実用的なソリューションを提供することです。それらの品質は、他の資料の品質よりもはるかに高く、AZ-800トレーニング資料の質問と回答には、利用可能な最良のソースからの情報が含まれています。これらはテスト標準に関連しており、実際のテストの形式で作成されます。初心者であれ経験豊富な試験受験者であれ、当社のAZ-800スタディガイドは大きなプレッシャーを軽減し、困難を効率的に克服するのに役立ちます。

Microsoft AZ-800 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• Deploy and Manage Active Directory Domain Services (AD DS) in On-Premises and Cloud Environments: This topic prepares Microsoft Administrators to deploy and manage AD DS domain controllers efficiently, including multi-site, multi-domain, and multi-forest environments. It provides essential knowledge for creating and managing AD DS security principals and integrating hybrid identities. Additionally, it covers administering Windows Server using domain-based Group Policies.
トピック 2	• Manage Virtual Machines and Containers: This topic focuses on managing Hyper-V and guest virtual machines, creating and managing containers, and administering Azure Virtual Machines running Windows Server. Microsoft Administrators gain insights into virtualized and containerized workloads, critical for ensuring performance and scalability in hybrid infrastructures.

トピック 3	• Manage Storage and File Services: This topic covers configuring and managing Azure File Sync, Windows Server file shares, and Windows Server storage. Microsoft Administrators develop the expertise to optimize storage solutions and manage file services efficiently in hybrid environments. These skills are critical for passing the AZ-800 and ensuring effective storage management in real-world applications.
トピック 4	• Manage Windows Servers and Workloads in a Hybrid Environment: This section equips Microsoft Administrators with skills to manage Windows Servers and workloads in hybrid setups, including using Azure services. It emphasizes the integration of on-premises servers with Azure for seamless workload management, offering a deep dive into managing hybrid environments.
トピック 5	• Implement and Manage an On-Premises and Hybrid Networking Infrastructure: This section trains Microsoft Administrators to implement on-premises and hybrid name resolution, manage IP addressing, and establish reliable network connectivity in hybrid scenarios. By mastering these areas, administrators ensure seamless communication across hybrid infrastructures.

Microsoft Administering Windows Server Hybrid Core Infrastructure 認定 AZ-800 試験問題 (Q207-Q212):

質問 # 207

Drag and Drop Question

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed. Server1 hosts a virtual machine named VM1.

Server1 has an NVMe storage device that is assigned to VM1 by using Discrete Device Assignment.

You need to make the device available to the host.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

正解:

解説:

□ Explanation:

<https://learn.microsoft.com/en-us/windows-server/virtualization/hyper-v/deploy/deploying-storage-devices-using-dda>

質問 # 208

You have an Azure subscription that contains the following resources:

- * An Azure Log Analytics workspace
- * An Azure Automation account
- * Azure Arc.

You have an on-premises server named Server1 that is onboarded to Azure Arc

You need to manage Microsoft updates on Server1 by using Azure Arc

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A. From the Automation account, enable Update Management for Server1.
- B. On Server1, install the Azure Monitor agent
- C. Add Microsoft Sentinel to the Log Analytics workspace
- D. From the Virtual machines data source of the Log Analytics workspace, connect Server1.

正解: A、B

解説:

質問 # 209

You have an on-premises server named Server 1 that runs Windows Server. Server 1 contains a file share named Share 1.

You have an Azure subscription.

You perform the following actions:

- * Deploy Azure File Sync
- * Install the Azure File Sync agent on Server1.
- * Register Server1 with Azure File Sync

You need to ensure that you can add Share1 as an Azure File Sync server endpoint.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

正解:

解説:

- 1 - Create an Azure Storage account.
- 2 - Create an Azure file share.
- 3 - Create a sync group.

質問 # 210

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. You implement a central store.

You create a new Group Policy Object (GPO) named GP01.

When you attempt to edit GP01, you see the settings shown in the exhibit. (Click the Exhibit tab.) You need to ensure that all settings are available.

Solution: You copy the contents of the C:\Windows\PolicyDefinitions folder to the central store.

Does this meet the goal?

- A. No
- B. Yes

正解: A

質問 # 211

DC1 fails.

You need to meet the technical requirements for the schema master.

Youruntdsutil.exe.

Which five commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order?

正解:

解説:

Explanation:
