NEW QUESTION # 58

Which document must be returned to SAP before a Deployment Lead can be assigned to the project?

- A. Enablement Workbook
- B. Deployment Overview
- C. Solution Design Matrix
- **D. Delivery Engagement Readiness Checklist**

Answer: D

Explanation:

The Delivery Engagement Readiness Checklist is a critical gatekeeper document that confirms all prerequisites and readiness criteria have been met before SAP assigns a Deployment Lead to a project. This checklist ensures project scope, resourcing, access, and other foundational elements are in place to proceed.

Other documents like Deployment Overview and Enablement Workbook are informative or internal project management tools but do not formally trigger Deployment Lead assignment. The Solution Design Matrix is a design artifact and not a staffing gating document.

This process supports structured project governance and resource allocation within SAP.

Answer: A

NEW QUESTION # 62

How can you create a field label with Italics?

- A. Find the correct folder
- B. Formatting of a field label is not possible
- C. By marking the text in the field and selecting Ctrl-I
- D. By using standard HTML formatting like `<i>label</i>` can be added to the field label
- E. By selecting the option "Italic label"

Answer: D

Explanation:

In SAP Ariba, field labels themselves do not support rich text formatting directly in the UI, meaning you cannot use Ctrl-I or a specific "Italic label" toggle to style the label. However, SAP allows the use of basic HTML tags, including `<i>` for italics, in help tip text or validation/error message text associated with fields. By embedding HTML tags like `<i>...</i>`, administrators can add italicized text in these auxiliary field descriptions, enhancing clarity and user guidance.

This is because SAP Ariba's UI rendering engine processes simple HTML in certain field-related text areas but treats field labels as plain text for consistency and localization reasons.

Therefore, the correct method for italicizing field-related text is using HTML tags in Help Tips or validation messages, not in the label itself.

This behavior is documented in SAP Ariba configuration best practices, emphasizing limited HTML support to maintain UI integrity and accessibility standards.
