

# 100% Valid HP HPE7-A11 Dumps PDF Updated Questions- BraindumpsIT

Our HPE7-A11 practice guide well received by the general public for immediately after you have made a purchase for our HPE7-A11 exam prep, you can download our HPE7-A11 study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for HPE7-A11 Learning Engine, the higher possibility you will pass the exam.

The HPE Network Campus Access Professional Architect Exam (HPE7-A11) certification exam is one of the hottest and most industrial-recognized credentials that has been inspiring beginners and experienced professionals since its beginning. With the HPE7-A11 certification exam successful candidates can gain a range of benefits which include career advancement, higher earning potential, industrial recognition of skills and job security, and more career personal and professional growth.

## Examcollection HP HPE7-A11 Dumps Torrent - HPE7-A11 Exam Tutorial

The emerging HP field creates a space for HPE Network Campus Access Professional Architect Exam (HPE7-A11) certification exam holders to accelerate their careers. Many unfortunate candidates don't get the HPE Network Campus Access Professional Architect Exam (HPE7-A11) certification because they prepare for its HPE Network Campus Access Professional Architect Exam (HPE7-A11) exam questions from an HP HPE7-A11 exam that dumps outdated material. It results in a waste of time and money. You can develop your skills and join the list of experts by earning this HPE Network Campus Access Professional Architect Exam (HPE7-A11) certification exam.

## HPE Network Campus Access Professional Architect Exam Sample Questions (Q119-Q124):

### NEW QUESTION # 119

XYZ Regional Hospital is an integrated healthcare system of hospitals, neighborhood health centers, and small doctor offices. XYZ Regional Hospital has recently merged with 4x neighborhood health centers and 125 doctor branch offices. The wireless, wired

access, and AAA solutions are outdated and need to be replaced.

XYZ Regional Hospital is looking to future-proof and improve efficiency across all sites by enhancing wired and wireless access and migrating to a centralized and unified wired/wireless and policy management that can provide uninterrupted availability of all systems.

Locations:

- XYZ Regional Hospital is located in New York City

- Dila Health Center is located in City A

- Mount Health Center is located in City B

- Rock Health Center is located in City C

- Branch clinics are located at different locations across the United States Requirements:

- Provide, via management software, one single pane of glass to manage wired and wireless LANs, and VPNs across campus, branch, and remote via web/cloud architecture providing near real-time insight, troubleshooting tools, and Service Level performance reporting.

- Seamless integration across wired, wireless, WAN, SD-Branch, IoT

- Provide secure wireless access to all the employees of the Regional Hospital and partners, as well as provide wireless Internet access to medical citizens when they visit our facilities.

- All-access points must support the following features and specifications: 802.11.ax (Wi-Fi 6E Certified)

- Security options including WPA2/WPA3, 802.1X with RADIUS secure authentication

- Identify and authenticate every wireless and wired device

- End-to-end role-based security

- Seamless mobility across the hospital for medical teams, patients, and visitors

- Cuts Wi-Fi deployment times from days to hours and enables Zero-Touch deployments across the site

- Establishes a resilient, future-ready network infrastructure with the intelligence, scalability, and intuitive toolsets to meet emerging needs

- Fully redundant branch solution with dynamic path selection to the hospital The IT director of the hospital is concerned that the branch clinics will not have an onsite resource to troubleshoot any issues that may arise and is looking for a solution that would allow the hospital IT team to proactively monitor the branch offices.

Requirements:

- Monitor wireless and wired connections

- End-to-end view of experience identifying the point of failures

- Proactively troubleshoot issues impacting application performance

What is the correct solution?

- A. HPF Aruba Networking User Experience Insight
- B. AirWave
- C. Client Insight
- D. HPF Aruba Networking ClearPass Device Insight

**Answer: A**

Explanation:

Aruba User Experience Insight (UXI) provides proactive monitoring using on-site UX sensors that continuously test wired, wireless, and application performance. It delivers end-to-end visibility, identifies points of failure, and alerts IT before users experience problems - ideal for remote branch clinics without local IT staff.

### NEW QUESTION # 120

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sq m). Data centers are all offsite and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services.

The client would like to ensure full wireless coverage in its 40 m x 40 m (130 ft x 130 ft) auditorium during company functions while maintaining the fewest APs for aesthetic purposes.

Wi-Fi 6 APs are a minimum requirement.

Which AP series would you use in the auditorium's 1,000 seats with a maximum take rate of

80%?

- A. AP515
- **B. AP635**
- C. AP555
- D. AP577

**Answer: B**

Explanation:

The Aruba AP-635 is a Wi-Fi 6 (802.11ax) access point, designed for high-density environments such as auditoriums. It is capable of providing high throughput and efficient airtime fairness to a large number of clients, which makes it suitable for an auditorium setting with 1,000 seats and a high take rate. The AP-635's advanced capabilities, including OFDMA and MU-MIMO, allow it to handle multiple simultaneous connections efficiently, ensuring robust wireless coverage and performance during company functions, all while keeping the number of APs to a minimum to satisfy aesthetic concerns.

### NEW QUESTION # 121

Hotspot Question

Based on this campus design, which layer is the most appropriate to be designed as a Border Persona, considering an EVPN VXLAN Fabric?

□

**Answer:**

Explanation:

□

### NEW QUESTION # 122

Manufacturing ABC is an international, mid-sized company specializing in producing industrial equipment. They have been in the market for over two decades and have established themselves as a reputable player in their industry. However, due to rapid technological advancements, their current network infrastructure is outdated and struggling to keep up with the demands of modern manufacturing processes.

Manufacturing ABC's network is a mix of multi-vendor legacy wired and wireless components, causing frequent downtime and hampering their production efficiency. The aging equipment leads to slow data transfer rates, unreliable connectivity, and increased vulnerability to cyber threats.

Fiber Cabling should be also upgraded as mostly OM2 is being used.

Compounding the network issues, the recent departure of the CTO has left the company without a clear direction for the network refresh project. There is a lack of consensus among the management team regarding the scope, budget, and timeline for the upgrade.

The primary objectives of the manufacturing customer are as follows:

- Improve network performance and reliability to enhance production processes and minimize downtime
  - Enhance network security to protect sensitive data and intellectual property
  - Streamline communication and collaboration among different departments within the organization
  - Ensure scalability to accommodate future growth and technology advancements
- Manufacturing ABC seeks a comprehensive network refresh that includes the following components:

- Upgrading the wired infrastructure to high-speed Ethernet switches to support increased data transfer rates and reduce latency
- Implementing a robust wireless solution with enterprise-grade access points to provide seamless connectivity across the manufacturing facility
- Centralized network management tools to simplify administration and monitoring of the network

Expectations:  
The customer expects the network refresh project to be handled efficiently, with minimal disruption to their ongoing operations. They are looking for a reliable and experienced network solutions provider who can understand their unique manufacturing requirements and deliver a customized solution that aligns with their budget constraints. The manufacturing customer is keen on receiving clear project proposals and support in decision-making, given the recent change of the CTO.

Your role as a network solutions provider is to address their concerns, offer expert guidance, and present a well-defined plan to meet their objectives effectively.

You assume that the current network infrastructure does not have any wireless shadow IT equipment operated on the various floors/production sites, but you want to verify this. How could you find out if wireless shadow IT equipment is currently operational?

- A. Use a wireless sniffer like Wireshark to scan the environment and look for anomalies.
- B. Ask employees if they use 3rd party equipment to create isolated Hotspots.
- C. Do a ping sweep and document the hostnames/responses. Find out the connected switch port and walk to this location.

- D. Do a passive site survey, analyze the outcome together with the customer, and decommission this equipment wherever possible.

**Answer: D**

Explanation:

A passive wireless site survey detects all RF devices transmitting in the environment, including unauthorized APs or hotspots. Reviewing the survey results with the customer allows identification and removal of any wireless shadow IT equipment.

### NEW QUESTION # 123

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sq m). Data centers are all offsite and will be out of scope for this project. The customer is underserved by its existing L2- based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services.

Through additional conversations with the customer, the team has determined that they will use EVPN-VXLAN to deliver dynamic segmentation. The customer wants to ensure that a particular VNI is only present when it is in use on that switch.

Which solution is valid and satisfies this technical requirement?

- A. Two 8320 switches in a VSX pair as a distribution layer  
Two VSF stacks of 6300s as edge switches  
The 8320s are configured as the VTEPs
- B. A single virtual chassis of four 8325s serves as a collapsed distribution/edge layer.  
The 8325s provide edge connectivity and serve as the VTEPs.
- C. Two 8325 switches in a VSX pair as a distribution layer  
Two VSF stacks of 6300s as edge switches  
The 6300s are configured as the VTEPs
- D. Two 6300 switches in a VSX pair as a distribution layer  
Two VSF stacks of 6100s as edge switches  
The 6100s are configured as the VTEPs

**Answer: C**

Explanation:

To ensure a VNI is present only on the switches where it is actually needed, the VTEP function should be placed at the edge.

Aruba's EVPN-VXLAN support includes the 6300 series as a non- border VTEP platform, while the 6100 does not support EVPN-VXLAN VTEP operation. Using the

8325 pair as the distribution layer and the 6300 edge stacks as VTEPs provides the distributed fabric behavior the customer wants, so VNIs are instantiated only where local endpoints require them.

### NEW QUESTION # 124

.....

As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the HPE7-A11 exam, the experts and professors from our company designed the best HPE Network Campus Access Professional Architect Exam test guide. The experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the HPE7-A11 learning dumps. We can promise that you will never miss the important information about the exam.
