SAP C-TS470-2412 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.
Thema 2	Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.
Thema 3	Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Thema 4	Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service C-TS470-2412 Prüfungsfragen mit Lösungen (Q39-Q44):

39. Frage

Where do you define the life cycle user statuses that are used for a repair object?

- A. They are determined via a profile assigned to the in-house repair transaction type (like REPA).
- B. They are assigned to the transaction type of the repair confirmation (like REPC).
- C. They are directly assigned to the repair order transaction type (like REPO).
- **D. They are assigned to user statuses from the status profile of the in-house repair item category (like REPI).**

Antwort: D

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, the life cycle user statuses for a repair object in the in-house repair process (scope item 3XX) are managed as follows:

- * They are assigned to user statuses from the status profile of the in-house repair item category (like REPI): The item category (e.g., REPI) defines the repair object's lifecycle stages (e.g., received, in repair, completed). A status profile is assigned to this item category in Customizing, and user statuses within this profile track the repair object's progression.
- * Transaction type of the repair confirmation (REPC): This is for confirmations, not repair object lifecycle statuses.
- * Repair order transaction type (REPO): The order type controls the overall process, not item-level lifecycle statuses.
- * Profile assigned to the in-house repair transaction type (REPA): While a profile exists, it's the item category's status profile that governs lifecycle statuses. This is configured under "Settings for Service Transactions" in SAP Customizing "Life cycle user statuses for repair objects are defined in the status profile assigned to the in-house repair item category (e.g., REPI)." (SAP Help Portal, In-House Repair Configuration).

40. Frage

What are the benefits of maintaining bills of material (BOMs) with BOM usage 4 (Plant Maintenance)? Note: There are 2 correct answers to this question.

- A. Spare parts planning in service order template
- B. Structuring of technical assets
- C. Spare parts planning in service order
- D. Spare parts planning in task list

Antwort: C,D

Begründung:

BOM usage 4 (Plant Maintenance) in SAP S/4HANA Cloud Private Edition, Service is designed for maintenance processes, listing components (e.g., spare parts) for technical objects. The correct benefits are spare parts planning in task list (C) and spare parts planning in service order (D). Let's break this down thoroughly.

What is BOM Usage 4?

A BOM with usage 4 is linked to equipment or functional locations, defining parts needed for maintenance (e.g., bolts, filters). It's maintained in transactions like IB01/IB02.

* Spare parts planning in task list (C): When a task list (e.g., for pump maintenance) references a technical object with a BOM usage 4, the BOM's components are pulled into the task list operations as planned spare parts. This ensures materials are reserved or ordered in advance. For example, Operation 0010 might list "Gasket" from the BOM.

* Spare parts planning in service order (D): A service order linked to a technical object inherits the BOM usage 4 components, enabling spare parts planning directly in the order. This supports reservations or goods issues (e.g., via IW31/IW32).

Why Not the Others?

* Spare parts planning in service order template (A): Service order templates define structure, not BOM-linked planning; BOM usage 4 applies to execution objects (orders, task lists).

* Structuring of technical assets (B): BOMs describe components, not the hierarchical structure (handled by functional locations or equipment hierarchies).

Real-World Benefit:

A pump's BOM (usage 4) lists "Seal" and "Bearing." A task list or service order automatically plans these, reducing downtime by ensuring availability.

"BOMs with usage 4 enable spare parts planning in task lists and service orders, enhancing maintenance efficiency."

41. Frage

You are a consultant on an SAP S/4HANA Cloud brownfield project. In a meeting, the customer decides to remodel an existing business process in accordance with clean core principles. Which of the following SAP Signavio solutions can be used for the remodeling?

- A. SAP Signavio Process Governance
- B. SAP Signavio Process Insights
- C. SAP Signavio Process Manager
- D. SAP Signavio Process Intelligence

Antwort: C

Begründung:

For remodeling a business process in an SAP S/4HANA Cloud brownfield project to align with clean core principles (minimal customizations, standard processes), SAP Signavio Process Manager (Option B) is the appropriate tool.

SAP Signavio Process Manager is a modeling tool that allows consultants to design, visualize, and optimize business processes using BPMN (Business Process Model and Notation). It supports remodeling by enabling the creation of process models that adhere to SAP's best practices, ensuring a clean core approach.

* A: Process Governance focuses on workflow execution and compliance, not remodeling.

* C: Process Insights provides analytics, not process design.

* D: Process Intelligence analyzes process performance, not remodeling.

"SAP Signavio Process Manager enables the remodeling of business processes to align with clean core principles by providing a platform for process design and optimization."

42. Frage

To which of the following can you assign maintenance packages? Note: There are 2 correct answers to this question.

- A. A task list
- B. A maintenance strategy
- C. A service technician
- D. A work schedule

Antwort: A,B

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, maintenance packages define the intervals or cycles (e.g., every 6 months, 1,000 hours) at which maintenance activities are performed within a maintenance plan. They are assigned to:

- * Task list (C): Maintenance packages can be linked to operations in a task list to specify when each operation is due.
- * Maintenance strategy (D): A maintenance strategy groups multiple packages (e.g., time-based or performance-based cycles) and is assigned to a maintenance plan, which then applies the packages.
- * Service technician (A): Technicians are assigned to operations, not maintenance packages directly.
- * Work schedule (B): This is not a standard object in SAP for assigning maintenance packages.

"Maintenance packages are assigned to task lists and maintenance strategies to define the scheduling intervals for maintenance activities in a plan."

43. Frage

Which object can you assign a personnel number to?

- A. Organizational unit
- B. Task list operation
- C. Work center
- D. Service team

Antwort: B

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, a personnel number refers to an identifier for an individual employee or resource, typically managed in the Human Resources (HR) module or linked via organizational management. The question asks which object allows direct assignment of such a personnel number.

The correct answer is task list operation (Option C). In a maintenance or service task list, operations define specific activities to be performed, and you can assign a personnel number to an operation to specify the responsible employee or technician. This assignment is part of capacity planning and resource allocation, ensuring that the right individual is scheduled for the task.

- * Organizational unit (A): This is a higher-level structure in organizational management (e.g., a department) and does not directly accept a personnel number assignment. Personnel are linked to it via positions or roles, not directly.
 - * Service team (B): While a service team consists of personnel, it is a group entity, and individual personnel numbers are not assigned to it as an object in this context.
 - * Work center (D): A work center represents a location or group of resources (e.g., machines or people) and can be linked to capacity, but it does not directly accept a personnel number assignment. Instead, it uses capacity categories or links to HR indirectly.
- "In task lists, operations can be assigned to specific personnel numbers to define the responsible employee for executing the task, facilitating detailed resource planning."
