Certification Lpi 010-160 Sample Questions, Exam 010-160 Cram Questions

If you are still struggling to prepare for passing Lpi real exam at this moment, our ITExamSimulator 010-160 vce dumps can help you preparation easier and faster. Our website can provide you Valid 010-160 Exam Cram with high pass rate to help you get certification, and then you will become a good master of certification exam.

Lpi 010-160 exam covers a range of topics, including Linux history and development, open-source applications, and command-line interfaces. It also tests a candidate's knowledge of basic security and file permissions, software installation and package management, and basic network configurations. 010-160 Exam comprises 40 multiple-choice questions, and the candidate has 60 minutes to complete the exam.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q16-Q21):

NEW QUESTION # 16

What are the differences between hard disk drives and solid state disks? (Choose two correct answers.)

- A. Hard disks can fail due to physical damage, while solid state disks cannot fail.
- B. Solid state disks can store many times as much data as hard disk drives.
- C. Hard disks have a motor and moving parts, solid state disks do not.

- D. Solid state disks provide faster access to stored data than hard disks.
- E. /dev/sdais a hard disk device while /dev/ssdais a solid state disk.

Answer: C,D

NEW QUESTION # 17

A user is currently in the directory /home/user/Downloads/ and runs the command ls ../Documents/ Assuming it exists, which directory's content is displayed?

- A. /home/Documents
- B. /home/user/Documents/Downloads/
- C. /Documents/
- D. /home/user/Downloads/Documents/
- E. /home/user/Documents/

Answer: E

Explanation:

The command ls ../Documents/ lists the contents of the directory /home/user/Documents/. The reason is that the argument ../Documents/ is a relative path that refers to the parent directory of the current directory, which is /home/user/, followed by the subdirectory Documents/. The ls command displays the files and directories in the specified path, or the current directory if no path is given. The command does not change the current directory, so the user remains in /home/user/Downloads/. Reference:

NEW QUESTION # 18

Most commands on Linux can display information on their usage. How can this information typically be displayed?

- A. By running the command with the option /? or /??.
- B. By running the command with the option /doc or /documentation.
- C. By running the command with the option ?! or ?=!
- D. By running the command with the option -h or --help.
- E. By running the command with the option -m or --manpage.

Answer: D

Explanation:

Most commands on Linux can display information on their usage by running the command with the option -h or --help. This option shows a brief summary of the command syntax, options, arguments, and examples. For example, running ls -h or ls --help will display the usage information for the ls command, which lists files and directories. The -h or --help option is a standard convention for most Linux commands, and it is useful for learning how to use a command or checking its available options. However, some commands may not support this option, or may use a different option to display usage information. In that case, you can use the man command to access the manual page for the command, which provides more detailed information on the command usage, description, options, arguments, examples, and references. For example, running man ls will display the manual page for the ls command. The man command is one of the applications covered in the Linux Essentials certification program from the Linux Professional Institute (LPI). Reference:

NEW QUESTION # 19

What is a Linux distribution?

- A. A set of changes to Linux which enable Linux to run on another processor architecture.
- B. An operating system based on Linux but incompatible to the regular Linux kernel.
- C. The Linux file system as seen from the root account after mounting all file systems.
- D. A bundling of the Linux kernel, system utilities and other software.
- E. The set of rules which governs the distribution of Linux kernel source code.

Answer: D

Explanation:

A Linux distribution is a collection of software that is based on the Linux kernel and can be installed on a computer or a device to create a functional operating system. A Linux distribution typically includes the Linux kernel, a set of system utilities and libraries, a graphical user interface (GUI), a package manager, and various applications and services. A Linux distribution may also include additional software or features that are specific to the distribution's goals, target audience, or philosophy. For example, some Linux distributions are designed for desktop users, while others are optimized for servers, embedded systems, or security. Some Linux distributions are based on other Linux distributions, while others are developed independently. Some Linux distributions are free and open source, while others are proprietary or commercial. Some Linux distributions are popular and widely used, while others are niche or experimental. Some examples of Linux distributions are Ubuntu, Fedora, Debian, Mint, Arch, and Red Hat. Reference:
