| Name              | Authentication Failed User Not Found                             |
| Sub Category      | Authentication                                                   |
| Category          | Event                                                            |
| Description       | Authentication failed, user not found                            |

An administrator has configured several wireless APs to use FortiAuthenticator as their RADIUS server. One user is unable to successfully authenticate. The user record exists in the system, but the FortiAuthenticator log shows Authentication failed, user not found.

What is the most likely cause of the problem?

- A. The RADIUS secret is incorrect.
- B. The RADIUS traffic is being sourced from an IP address not listed as NAS.
- C. No client entry exists for the authenticating AP.
- **D. RADIUS authentication is not enabled for the user.**

**Antwort: D**

Begründung:

The log message indicates that FortiAuthenticator cannot find the user during RADIUS authentication, even though the user exists in the system. This typically happens when RADIUS authentication is not enabled for that user account, preventing FortiAuthenticator from using it for RADIUS login requests.

## 26. Frage

What happens when a certificate is revoked? (Choose two.)

- A. Revoked certificates cannot be reinstated for any reason
- **B. All certificates signed by a revoked CA certificate are automatically revoked**
- C. External CAs will periodically query FortiAuthenticator and automatically download revoked certificates

- D. Revoked certificates are automatically added to the CRL

**Antwort: B,D**

### 27. Frage

You have implemented two-factor authentication to enhance security to sensitive enterprise systems.

How could you bypass the need for two-factor authentication for users accessing form specific secured networks?

- A. Specify the appropriate RADIUS clients in the authentication policy.
- B. Create an admin realm in the authentication policy.
- C. Enable Adaptive Authentication in the portal policy.
- D. Enable the Resolve user geolocation from their IP address option in the authentication policy.

**Antwort: C**

### 28. Frage

Which two data items are not synchronized in an active-active HA deployment? (Choose two.)

- A. Group mappings
- B. User certificates
- C. FSSO events
- D. Seeds

**Antwort: C,D**

Begründung:

In an active-active HA deployment, FSSO events and seeds are not synchronized between FortiAuthenticator units, as these are instance-specific and typically handled locally on each node.

### 29. Frage

Which of the following services can be configured for remote authentication in FortiAuthenticator?

- A. Virtual reality gaming
- B. Social media integration
- C. Online shopping
- D. Remote desktop access

**Antwort: D**

### 30. Frage
