CISSP Customizable Exam Mode & CISSP Valid Exam Simulator

Desktop Certified Information Systems Security Professional (CISSP) (CISSP) practice test software is the first format available at ValidVCE. This format can be easily used on Windows PCs and laptops. The Certified Information Systems Security Professional (CISSP) (CISSP) practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this Certified Information Systems Security Professional (CISSP) (CISSP) desktop-based practice test software is that it includes multiple mock tests that have ISC CISSP practice questions identical to the actual exam, providing users with a chance to get Certified Information Systems Security Professional (CISSP) (CISSP) real exam experience before even attempting it.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q648-Q653):

NEW QUESTION # 648

The RSA Algorithm uses which mathematical concept as the basis of its encryption?

- A. Geometry
- B. PI (3.14159...)
- C. Large prime numbers
- D. Irrational numbers

Answer: C

NEW QUESTION # 649

Which disaster recovery plan test involves functional representatives meeting to review the plan in detail?

- A. Simulation test
- B. Parallel test
- C. Structured walk-through test
- D. Checklist test

Answer: C

Explanation:
The structured walk-through test occurs when the functional representatives meet to review the plan in detail. This involves a thorough look at each of the plan steps, and the procedures that are invoked at that point in the plan. This ensures that the actual planned activities are accurately described in the plan. The checklist test is a method of testing the plan by distributing copies to each of the functional areas. The simulation test plays out different scenarios. The parallel test is essentially an operational test that is performed without interrupting current processing. NEW QUESTION # 650

Refer to the information below to answer the question.
An organization experiencing a negative financial impact is forced to reduce budgets and the number of Information Technology (IT) operations staff performing basic logical access security administration functions. Security processes have been tightly integrated into normal IT operations and are not separate and distinct roles.
Which of the following will be the PRIMARY security concern as staff is released from the organization?

- A. Inadequate IT support
- B. Undocumented security controls
- C. Loss of data and separation of duties
- D. Additional responsibilities for remaining staff

Answer: C

NEW QUESTION # 651

During a Disaster Recovery (DR) simu-lation, it is discovered that the shared recovery site lacks adequate data restoration capabilities to support the implementation of multiple plans simultaneously. What would be impacted by this fact if left unchanged?

- A. Business Impact Analysis (BIA)
- B. Recovery Time Objective (RTO)
- C. Recovery Point Objective (RPO)
- D. Return on Investment (ROI)

Answer: B

Explanation:
Disaster Recovery (DR) is the process of restoring the normal operations of an organization after a disaster, such as a fire, flood, earthquake, or cyberattack. DR planning involves identifying the critical business functions and processes, assessing the potential impacts and risks of a disaster, and developing strategies and procedures to recover from a disaster. One of the key metrics in DR planning is the Recovery Time Objective (RTO), which is the maximum acceptable time that a business function or process can be unavailable or disrupted after a disaster. RTO is determined by the business impact analysis (BIA), which evaluates the financial,

operational, and reputational consequences of a prolonged downtime. RTO helps to prioritize the recovery of the most critical business functions and processes, and to allocate the necessary resources and personnel for the recovery. If the shared recovery site lacks adequate data restoration capabilities to support the implementation of multiple plans simultaneously, the RTO of the affected business functions and processes would be impacted, as they would take longer to resume their normal operations. NEW QUESTION # 652
What is Dumpster Diving?

- A. Performing media analysis
- B. performing forensics on the deleted items
- C. Running through another person's garbage for discarded document, information and other various items that could be used against that person or company
- D. Going through dust bin

Answer: C

Explanation:
The answer: Running
through another person's garbage for discarded document,
information and other various items that could be used against that person or company. Dumpster
diving is done with malicious intent. A synonym for Dumpster Diving is Data Scavenging.
The following answers are incorrect:
Going through dust bin will not give you access to sensitive information. It was not the best choice.
Performing forensics on the deleted items is related to data remanence which means files were
not destroyed properly and they can be recovered using specialized tools.
Performing media analysis is not related to going through rubbish in a dumpster.
