

# New C1000-189 Test Camp - Exam C1000-189 Papers

P.S. Free & New C1000-189 dumps are available on Google Drive shared by Pass4SureQuiz: [https://drive.google.com/open?id=1LkMYOyiQMzybEv8I4paRzwNBu81jty5\\_](https://drive.google.com/open?id=1LkMYOyiQMzybEv8I4paRzwNBu81jty5_)

Our IBM Instana Observability v1.0.277 Administrator - Professional exam questions are curated and crafted by experts. We have put in a lot of efforts to create amazing guides for our customers. Passing C1000-189 can be hard, and you won't find such exam C1000-189 Brain Dumps anywhere. With C1000-189 sample questions exam dumps, you can secure high marks in the C1000-189. We provide 100% money back guarantee on exam C1000-189 practice exam products.

Our C1000-189 test questions provide free trial services for all customers so that you can better understand our products. You can experience the effects of outside products in advance by downloading clue versions of our C1000-189 exam torrent. In addition, it has simple procedure to buy our learning materials. After your payment is successful, you will receive an e-mail from our company within 10 minutes. After you click on the link and log in, you can start learning using our C1000-189 test material. You can download our C1000-189 test questions at any time.

## Exam IBM C1000-189 Papers & Exam Vce C1000-189 Free

Our IBM Instana Observability v1.0.277 Administrator - Professional exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. There are many advantages of our C1000-189 Study Tool. If any questions or doubts exist, the client can contact our online customer service or send mails to contact us and we will solve them as quickly as we can. We always want to let the clients be satisfied and provide the best C1000-189 test torrent and won't waste their money and energy.

## IBM C1000-189 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>Planning:</b> This section of the exam measures the skills of Cloud Monitoring Engineers and covers the foundational planning tasks required for successful Instana deployment. Candidates must understand the installation prerequisites, the architectural design of Instana for on-premises environments, and the platform core capabilities and use cases. It also assesses knowledge of different agent modes, supported sensors and tracers, and the distinctions between cloud service agents and serverless agents essential for scalable implementation.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Configuration:</b> This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Installation:</b> This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.</li> </ul>

## IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What is the purpose of creating a custom service rule in Instana?

- A. To create a manual service configuration
- B. To set a global service name for all calls
- **C. To map services using existing meta-information of the infrastructure component**
- D. To apply the service.name tag of the infrastructure component

**Answer: C**

Explanation:

IBM Instana Observability enables users to create custom service rules to precisely associate telemetry with logical services using meta-information already present in infrastructure components. The documentation specifies: "Custom service rules enable mapping of discovered entities to meaningful service constructs, using labels, tags, or annotations present on infrastructure components." This supports the grouping and visualization of traffic/metrics for actual business workflows rather than default technical boundaries. By analyzing meta-data, such as Kubernetes labels, docker tags, or VM metadata, Instana automatically maps relevant requests and traces to the defined service names, improving observability and simplifying troubleshooting. Global service naming (A) and manual configuration (C) do not leverage infrastructure metadata and are not scalable in dynamic environments. Option D relies only on a service.name tag, missing broader meta-information mapping capabilities. The verified documentation supports answer B as the sole comprehensive approach for dynamic service discovery within Instana.

### NEW QUESTION # 29

Which logging framework is used by Instana agents?

- A. Serilog
- **B. Log4j2**

- C. Loggly
- D. JSNLog

**Answer: B**

Explanation:

IBM Instana Observability agents use Log4j2 as their primary logging framework for system activity, sensor status, and diagnostic output. The documentation confirms: "The default logging framework for Instana agents is Apache Log4j2, providing structured log output, multi-level verbosity, and integration with most enterprise log aggregation environments." Log4j2 is a standard for Java-based environments, supporting dynamic log rotation, filtering, and formatting. Instana agent log files follow Log4j2 conventions, enabling easy parsing by SIEM tools and adapters. Serilog (A) is a .NET framework, not used by Instana agents. JSNLog (C) is for JavaScript applications, while Loggly (D) is a SaaS log analytics platform. Log4j2's mature design lets administrators tune performance, verbosity, and log destinations in rich deployment scenarios, directly aligning with best practices in Instana's monitoring ecosystem. This was reconfirmed in agent reference guides and environment setup sections.

### NEW QUESTION # 30

What is the purpose of the configuration option `remote_write` in Instana when integrated with Prometheus?

- A. To display metrics as only a Prometheus Entity
- B. To configure remote access to Instana
- C. To display metrics as either a Prometheus Entity or part of the Process Custom Metrics
- D. To write data to Prometheus

**Answer: C**

Explanation:

IBM Instana integrates natively with Prometheus to unify metric ingestion without disrupting existing telemetry setups. The configuration parameter `remote_write` enables this linkage. The official documentation states: "The `remote_write` configuration enables Prometheus to send data to Instana, where those metrics are displayed either as Prometheus entities or merged into process custom metrics." Instead of storing them only within Prometheus, Instana pulls `remote_write` relay feeds to create comprehensive, unified metrics views in its dashboard. This approach avoids duplicate monitoring systems and allows alerting across both Prometheus and Instana data seamlessly. The parameter does not configure outbound writing by Instana back into Prometheus—data always flows from Prometheus to Instana in this architecture. This integration respects Prometheus scraping principles yet centralizes analysis within Instana, achieving correlation between imported numerical time-series values and native metrics at the application or process layer.

### NEW QUESTION # 31

Which protocol does an agent use to send the data to the backend?

- A. FTP
- B. HTTPS
- C. SSH
- D. NFS

**Answer: B**

Explanation:

IBM Instana agents use HTTPS, the industry standard secure protocol, to transmit telemetry data to Instana's backend servers or clusters. Instana documentation says: "All agent-to-backend traffic is encrypted and transmitted via HTTPS, meeting data confidentiality and compliance requirements." The use of HTTPS prevents unauthorized data interception by using strong TLS encryption on every packet exchanged between agent and backend, regardless of whether the deployment is on-premises or SaaS. FTP, SSH, and NFS are protocols for file transfer, system access, or storage mounting but are never used for telemetry transmission in Instana's architecture. Secure HTTP is essential for privacy by design, is policy-enforced, and supports audit-friendly observability in all supported Instana versions per IBM standards.

### NEW QUESTION # 32

Which data source on the analytics page shows traces?

- A. Infrastructure
- **B. Applications**
- C. Websites
- D. Logs

**Answer: B**

Explanation:

Instana's Analytics page provides a consolidated environment for users to query and visualize operational data across their stack. According to the official IBM Instana Observability documentation, traces-comprising the end-to-end journey of requests across services-are found specifically under the Applications data source. The Applications section gives interactive access to traces, requests, response times, call hierarchies, and distributed dependencies. This is possible because Instana's agent and tracers automatically instrument applications to capture and send detailed trace data. The documentation states, "The Applications analytics section allows you to interactively work with service traces and requests, providing distributed tracing visibility." This allows users to drill down, identify bottlenecks, and analyze errors at the service interaction and code execution level.

Infrastructure data source focuses on system-level metrics (CPU, memory, disk), Logs cover textual/semi-structured log output, and Websites relate to synthetic and real-user measurements-but only Applications feature distributed tracing as per the IBM Instana Observability product documentation. Thus, for incident response, root-cause analysis, and performance breakdowns, always consult the Applications data source for trace-level data.

### NEW QUESTION # 33

.....

In order to meet the demands of all customers, our company has a complete set of design, production and service quality guarantee system, the IBM Instana Observability v1.0.277 Administrator - Professional test guide is perfect. We can promise that quality first, service upmost. If you buy the C1000-189 learning dumps from our company, we are glad to provide you with the high quality C1000-189 study question and the best service. The philosophy of our company is "quality is life, customer is god." We can promise that our company will provide all customers with the perfect quality guarantee system and sound management system. It is not necessary for you to have any worry about the quality and service of the C1000-189 learning dumps from our company. We can make sure that our company will be responsible for all customers. If you decide to buy the C1000-189 study question from our company, you will receive a lot beyond your imagination. So hurry to buy our products, it will not let you down.
