SAP P-SECAUTH-21 Certified Technology Professional - System Security Architect 3

The security administrator is troubleshooting authorization errors using transaction SU53. While running transaction MM50, the user received the following error.  
"You are not authorized to use transaction MM01"  
The user's position in the organization makes it inappropriate for them to have direct access to transaction MM01 because it creates a Segregation of Duties conflict.  
How can the security administrator resolve the issue and still provide the user with the needed access to MM50?

- A. Set the value form instance parameter auth/no\_check\_in\_some\_cases to N.
- B. Remove transaction MM01 as a CALLING transaction from table TCDCOUPLES.
- C. Set the check indicator (for the transaction authorization called by the MM01 transaction) to NO, using transaction SE97 for transaction MM50.
- D. Set the check indicator value for object S\_TCODE in the SU24 data for transaction MM01 to Do Not Check.

正解C

質問 # 79  
A user is authorized to run SP01. What can this user access with authorization object S\_SPO\_ACT when the 'Value for Authorization Check' field is set to "\_USER\_"?

- A. All spool requests for a specific user in the client
- B. All unprotected spool requests for all users in the client
- C. All spool requests for users in the same user group
- D. All spool requests for all users in the client

正解A

解説:  
Explanation  
This is one of the things that a user can access with authorization object S\_SPO\_ACT when the 'Value for Authorization Check' field is set to "USER" and they are authorized to run SP01 transaction. S\_SPO\_ACT is an authorization object that controls access to spool requests based on various criteria, such as spool request number, output device, or user name. SP01 is a transaction that allows you to display and manage spool requests, which are requests for printing or outputting data from SAP systems. If the 'Value for Authorization Check' field is set to "USER" in S\_SPO\_ACT authorization object, the user can access all spool requests for their own user name in the client where they are logged on. IBFCSM CEDP的中関連問題、CEDP合格問題

一つの試験だけでは多くの時間を無駄にする必要がありません。CEDP認定試験が大変難しいと感じて、多くの時間を取らなければならないとしたら、ツールとしてMogiExamのCEDP問題集を利用したほうがいいです。この問題集はあなたに時間を節約させることができますから。もっと重要なのは、この問題集はあなたが試験に合格することを保証できますから。この問題集よりもっと良いツールは何一つありません。試験の準備をするのにたくさんの時間を無駄にするより、そんな時間を利用してもっと有意義なことをしたほうがいいです。ですから、はやくMogiExamのサイトに行ってもっと多くの情報を読みましょう。この素晴らしいチャンスを逃したらきつと後悔しますよ。

## IBFCSM Certified Emergency and Disaster Professional 認定 CEDP 試験問題 (Q48-Q53):

### 質問 # 48

What department or agency holds sector responsibilities for Information Technology?

- A. Department of Homeland Security
- B. Federal Communications Commission
- C. National Institute of Standards and Technology

正解: A

解説:

Under the National Infrastructure Protection Plan (NIPP), the Department of Homeland Security (DHS) is the designated Sector-Specific Agency (SSA) for the Information Technology (IT) Sector. This responsibility is specifically executed by the Cybersecurity and Infrastructure Security Agency (CISA) within DHS. The IT Sector is considered a "cross-cutting" sector because nearly every other critical infrastructure sector (such as Energy, Finance, and Water) depends on IT for its daily operations.

The DHS role in IT sector responsibility includes:

- \* Risk Management: Identifying and mitigating threats to the hardware, software, and systems that enable the Internet and other critical networks.
- \* Incident Response: Coordinating the federal response to significant cyber-attacks through the National Cyber Incident Response Plan (NCIRP).
- \* Information Sharing: Facilitating the exchange of threat indicators between the government and private IT companies via the IT-ISAC (Information Sharing and Analysis Center).

The FCC (Option B) focuses on the Communications sector (the physical wires and airwaves), and NIST (Option C) develops the Standards used for cybersecurity, but it is DHS/CISA that holds the operational and coordination responsibility for the sector's protection. For the CEDP professional, this means that DHS is the primary point of contact for cyber-resilience. By securing the IT sector, DHS protects the "Virtual Systems" that manage everything from the electric grid to the air traffic control system, ensuring that the nation's digital backbone remains resilient against both natural disruptions and intentional attacks.

### 質問 # 49

What did EMS personnel learn during initial involvement with injured Joplin tornado victims?

- A. A well-designed ICS contributed to less confusion at the disaster location
- B. Adaptation to a variety of issues helped promote fluidity of the situation
- C. Triage and medical treatment became more effective than victim transport

正解: B

解説:

The response to the May 2011 Joplin, Missouri tornado serves as a foundational case study in the IBFCSM CEDP curriculum regarding the necessity of tactical flexibility. According to the NIST and FEMA After-Action Reports, the primary lesson learned by EMS and first responders was that adaptation to a variety of issues helped promote fluidity of the situation. The sheer scale of the EF-5 tornado caused a near-total collapse of standard communications, destroyed the city's main hospital (St. John's Regional Medical Center), and blocked primary transport routes with massive amounts of debris.

In this chaotic environment, rigid adherence to pre-planned protocols became impossible. EMS personnel had to adapt by utilizing unconventional transport vehicles (such as pickup trucks and flatbed trailers) when ambulances could not navigate the debris-strewn streets. They established "ad hoc" casualty collection points in parking lots and hardware stores because the designated facilities were gone. This "fluidity" was not a result of a lack of planning, but rather a high level of Operational Resilience where responders understood the intent of the mission (life safety) and adapted their methods to overcome physical barriers.

While a well-designed ICS (Option A) is always a goal, the Joplin reports indicated that the initial hours were characterized by significant "command fog" due to the loss of the primary EOC and radio towers. It was the

"bottom-up" adaptation of field personnel that stabilized the incident. Option B is incorrect because, in Joplin, rapid transport to secondary facilities in nearby towns became the life-saving priority once the primary hospital was incapacitated. The Joplin event proved that in catastrophic "Black Swan" events, the ability of personnel to innovate, communicate through face-to-face relays, and utilize available local resources is what ensures the success of the response when the "ideal" system fails.

#### 質問 # 50

What disaster related concept addresses culture, mission and structure of any business entity?

- A. Continuity management
- B. Enterprise management
- C. Knowledge management

正解: A

解説:

Continuity Management (specifically Business Continuity Management or BCM) is the holistic management process that identifies potential impacts that threaten an organization and provides a framework for building resilience. Unlike simple emergency response, which focuses on the immediate "lights and sirens" phase, continuity management addresses the culture, mission, and structure of the business to ensure that its "Essential Functions" can continue regardless of the disruption.

According to ISO 22301 (the international standard for Business Continuity Management Systems), an effective plan must align with the organization's mission. If a company's mission is to provide 24/7 banking services, its continuity structure must include redundant data centers and remote work protocols. The

"culture" aspect is critical because resilience is not just a document on a shelf; it is the embedded awareness and training of the staff (the "human element"). The "structure" refers to the succession of leadership and the delegation of authority, ensuring that the organization can still make decisions if the primary headquarters or executive team is unavailable.

In the IBFCSM CEDP body of knowledge, BCM is seen as the "long-game" of disaster preparedness. It bridges the gap between the initial response and the final recovery. A business that only has an emergency plan but lacks a continuity plan may survive the initial fire but fail as an entity because it cannot resume its mission-critical services quickly enough to satisfy customers or regulators. Therefore, continuity management is the "DNA" of organizational resilience, integrating the core values and structural integrity of the business into every layer of the disaster plan.

#### 質問 # 51

During a building fire, contact between elevator cars and a central location must be maintained for how long?

- A. 30 minutes
- B. 60 minutes
- C. 45 minutes

正解: B

解説:

In the event of a building fire, elevator safety and communication are governed by ASME A17.1 (Safety Code for Elevators and Escalators) and the NFPA 101 (Life Safety Code). These codes require that two-way emergency communication systems between the elevator car and a constantly attended central location (such as a security desk or an off-site monitoring service) be maintained for a minimum of 60 minutes during a power failure or fire emergency. While the primary communication systems must have back-up power for a longer duration (often 4 hours for voice), the specific operational survival and signaling requirement for the two-way emergency system and its audible alarm often centers on the 60-minute mark to ensure that passengers trapped during a fire-related shutdown can be located and comforted by rescue personnel.

The 60-minute duration is critical because elevator cars often enter "Phase I Emergency Recall" or "Phase II Emergency In-Car Operation" during a fire. If a car becomes stuck between floors due to a power outage or mechanical failure caused by the fire, the occupants' only link to the outside world is the emergency phone.

Providing a minimum of one hour of operational time allows fire departments and building engineers to prioritize their initial life-safety tasks while maintaining contact with anyone potentially trapped in the vertical transport system.

For a CEDP professional or a Facility Safety Manager, verifying this 60-minute communication capability is a vital part of the Hazard Vulnerability Analysis (HVA) for high-rise structures. If the battery backup for the elevator's internal communication panel fails before this time, it creates a "communication blackout," significantly increasing the risk of panic and complicating the rescue mission. This standard ensures that even if the building's main power grid is compromised by the fire, the "lifeline" to the elevator remains intact long enough for the Incident Command to execute a coordinated extraction.

## 質問 # 52

What agency has responsibility for water and wastewater systems during an emergency?

- A. Environmental Protection Agency
- B. U.S. Department of Agriculture
- C. Department of Interior

正解: A

解説:

As established by Homeland Security Presidential Directive 7 (HSPD-7) and the National Response Framework (NRF), the Environmental Protection Agency (EPA) is the designated Sector-Specific Agency (SSA) for the Water and Wastewater Systems sector. This sector is one of the 16 critical infrastructure sectors essential to the nation's security, economy, and public health.<sup>10</sup> During an emergency, the EPA's responsibility is to coordinate the protection and rapid restoration of these systems. The EPA performs several critical roles during a disaster response:<sup>11</sup>

\* Technical Assistance: Providing expertise on water treatment, contaminant identification, and infrastructure repair.<sup>12</sup>

\* Laboratory Support: Utilizing the Environmental Response Laboratory Network (ERLN) to analyze water samples for chemical or biological agents.<sup>13</sup>

\* Regulatory Oversight: Ensuring that emergency measures (like boil water advisories) follow the Safe Drinking Water Act (SDWA). While the USDA (Option B) provides support for water systems in rural communities (typically under 10,000 residents), the overall sector responsibility for the entire nation lies with the EPA. For a CEDP professional, the EPA is the primary federal partner for Emergency Support Function #10 (Oil and Hazardous Materials) and a key supporter for ESF #3 (Public Works and Engineering). The EPA manages tools like the Water Health and Economic Analysis Tool (WHEAT) and the Water ISAC to help water utilities assess risks and share threat information.<sup>14</sup> By leading this sector, the EPA ensures that one of the most vital "Community Lifelines"- potable water-is restored as quickly as possible, preventing secondary public health crises following a primary disaster.
