

Valid 2V0-11.25 Test Blueprint - 2V0-11.25 Latest Braindumps Files

BONUS!!! Download part of SurePassExams 2V0-11.25 dumps for free: <https://drive.google.com/open?id=1SaBEcb8dJpd-K5PnFt3iCudoXtsmYB9d>

All the advantages of our 2V0-11.25 exam braindumps prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on 2V0-11.25 exam. We can claim that prepared with our 2V0-11.25 study guide for 20 to 30 hours, you can easily pass the exam and get your expected score. Also we offer free demos for you to check out the validity and precise of our 2V0-11.25 Training Materials. Just come and have a try!

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 2	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.

Topic 3	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 4	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 5	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

SurePassExams 2V0-11.25 Exam Questions Demo is Available for Instant Download Free of Cost

Getting a certificate is not an easy thing for some of the candidates. 2V0-11.25 test dumps not only contain the quality, but also contain certain quality for your exam. Through using the 2V0-11.25 test dumps of us, you can pass the exam. In addition, 2V0-11.25 Test Dumps of us have the most of the knowledge points, and you can improve your ability in the process of learning. If you have any other questions about the 2V0-11.25 study materials, just contact us.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

How do virtual machine (VM) storage policies in a VMware vSphere environment contribute to optimizing resource utilization, ensuring data availability, and meeting application-specific requirements?

- A. By streamlining the process of automating virtual machine backups
- B. By regulating and optimizing storage traffic between virtual machines
- C. By defining and enforcing storage requirements, such as performance, availability, and redundancy
- D. By guaranteeing storage IOPs for a particular virtual machine

Answer: C

Explanation:

VM storage policies let you specify requirements like performance tiers, redundancy levels, and availability SLA, and vSphere enforces these rules against underlying storage capability profiles to optimize resource usage and meet application needs.

NEW QUESTION # 76

DRAG DROP

Arrange the steps in the correct order to generate a performance report in Aria Operations.

Answer:

Explanation:

A screenshot of a computer AI-generated content may be incorrect.

NEW QUESTION # 77

An administrator is configuring a newly provisioned workload domain within a VMware Cloud Foundation (VCF) environment. The workload domain will contain virtual machines hosting applications which are considered business critical, and the administrator wants to ensure that the virtual machines are given priority over other network traffic types.

Which three steps should the administrator perform to achieve this goal? (Choose three.)

- A. Create a new vSphere Distributed Switch (vDS) specifically for virtual machine traffic.
- **B. Configure a bandwidth resource allocation for the virtual machine traffic type.**
- C. Configure dedicated physical network adapters for the ESXi management traffic.
- D. Disable bandwidth resource allocations for all other traffic types to ensure virtual machine traffic gets full bandwidth.
- **E. Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic.**
- **F. Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).**

Answer: B,E,F

Explanation:

According to the VMware Cloud Foundation 5.2 Administration Guide and the official vSphere Networking documentation, prioritizing virtual machine (VM) network traffic for business-critical applications in a VCF environment requires configuring Network I/O Control (NIOC) on the vSphere Distributed Switch (vDS), allocating bandwidth resources, and creating resource pools for VM traffic. Below are the exact extracts and official explanations:

Option A: Configure a bandwidth resource allocation for the virtual machine traffic type. Extract from official VMware documentation:

"With Network I/O Control (NIOC) enabled on the vSphere Distributed Switch, you can allocate bandwidth to specific network resource types such as virtual machine traffic. Configuring bandwidth allocation ensures that business-critical VM traffic is prioritized on the physical network." (VMware vSphere Networking Guide) Option B: Enable Network I/O control (NIOC) on the workload domain vSphere Distributed Switch (vDS).

Extract:

"Network I/O Control must be enabled on the vSphere Distributed Switch to use features such as bandwidth allocation and resource pools. This allows you to guarantee minimum bandwidth and prioritize specific traffic types, including VM traffic." (VMware vSphere Networking Guide, VMware Cloud Foundation Administration Guide) Option F: Configure a new network resource pool to assign shares, limits and reservations for the virtual machine traffic. Extract:

"Network resource pools allow administrators to assign shares, limits, and reservations to virtual machine traffic on the vSphere Distributed Switch. This ensures that business-critical workloads receive the necessary network resources, even in times of contention." (VMware vSphere Networking Guide) Why Not the Other Options?

Option C: Creating a new vDS is not required specifically for prioritizing VM traffic; this can be done within the existing vDS.

Option D: While dedicated adapters can help with physical separation, they do not control network priority among traffic types within the vDS.

Option E: Disabling all other allocations is not recommended or supported and could disrupt other network operations.

Summary:

To ensure business-critical virtual machine traffic is prioritized over other types, the administrator should:

Enable NIOC on the vDS (B),

Configure bandwidth resource allocations for VM traffic (A), and

Create a new network resource pool to set shares, limits, and reservations for VM traffic (F). These steps are outlined and supported by the official VMware Cloud Foundation and vSphere Networking documentation.

NEW QUESTION # 78

While deploying a new VMware Cloud Foundation environment, a cloud administrator validates the information entered into the Deployment Parameter Workbook. The validation action results in an error and the VMware Cloud Builder GUI error message does not identify the cause.

Which logfile can the administrator use to identify the cause of the validation error?

- A. VMware SDDC Manager appliance - vcf-deployment-debug.log
- **B. VMware Cloud Builder appliance - vcf-deployment-debug.log**
- C. VMware Cloud Builder appliance - vcf-bringup-debug.log
- D. VMware SDDC Manager appliance - vcf-bringup-debug.log

Answer: B

Explanation:

The vcf-deployment-debug.log file on the VMware Cloud Builder appliance contains detailed logs related to the deployment process, including any validation errors. This log will help identify the cause of the error during the deployment validation phase.

NEW QUESTION # 79

What is the primary purpose of configuring a Virtual Distributed Switch (VDS) in a vSphere environment?

- A. To enable VM snapshots across multiple datastores.
- **B. To provide centralized management of network configurations across multiple ESXi hosts.**
- C. To manage storage policies for datastores.
- D. To automate the deployment of virtual machines.

Answer: B

Explanation:

A Virtual Distributed Switch (VDS) in a vSphere environment enables centralized management of network configurations across multiple ESXi hosts. It simplifies network administration by allowing the administrator to configure network settings, such as VLANs, port groups, and policies, for multiple hosts at once, ensuring consistency and scalability.

NEW QUESTION # 80

.....

You can invest safely spend your money to get 2V0-11.25 exam preparation products with as we provide money back guarantee. If you won't pass the actual 2V0-11.25 exam, after using the SurePassExams practice test or PDF questions and answers booklet useful for preparing the 2V0-11.25 exam version, you can get the money back. We offer a free trial also, so that you can check the quality and working of 2V0-11.25 Exam Practice test software. In case, you have prepared the 2V0-11.25 exam with our products and did not pass the exam we will reimburse your money.
