### NEW QUESTION # 89

An engineer is extending an EPG out of the ACI fabric using static path binding. Which statement about the endpoints is true?

- A. External endpoints are in a different bridge domain than the endpoints in the fabric.
- B. Endpoints must connect directly to the ACI leaf port.
- C. External endpoints are in the same EPG as the directly attached endpoints.
- D. Endpoint learning encompasses the MAC address only.

**Answer: C**

Explanation:

When extending an EPG out of the ACI fabric using static path binding, it is true that external endpoints are in the same EPG as the directly attached endpoints. This means that traffic received on a statically bound leaf port with a specific VLAN ID is mapped to the EPG, and the same policies applied to directly attached endpoints are enforced on the external endpoints.

### NEW QUESTION # 90

### NEW QUESTION # 92

Refer to the exhibit.

A Cisco ACI fabric is newly deployed, and the security team requires more visibility of all inter-EPG traffic flows. All traffic in a VRF must be forwarded to an existing firewall pair. During failover, the standby firewall must continue to use the same IP and MAC as the primary firewall. Drag and drop the steps from the left into the Implementation order on the right to configure the service graph that meets the requirements. (Not all steps are used.)
