Free PDF Salesforce - PDII - Fantastic Question Platform Developer II Explanations

With so many online resources, knowing where to start when preparing for an Platform Developer II (PDII) exam can be tough. But with Platform Developer II (PDII) practice test, you can be confident you're getting the best possible PDII exam dumps. VCEPrep exam simulator mirrors the PDII Exam-taking experience, so you know what to expect on PDII exam day. Plus, with our wide range of Salesforce PDII exam questions types and difficulty levels, you can tailor your PDII exam practice to your needs.

Salesforce Certified Platform Developer II (PDII) exam is an advanced certification intended for experienced developers who are looking to demonstrate their expertise in developing custom applications on the Salesforce platform. Platform Developer II certification is designed to test a developer's knowledge and skills in designing and implementing complex business logic, data models, and security mechanisms using Apex programming language and other Salesforce development tools.

Salesforce Platform Developer II Sample Questions (Q39-Q44):

NEW QUESTION # 39
Universal Containers is implementing a new approval process for expense reimbursements. The process requires complex logic to

determine the appropriate approver based on factors such as expense amount, employee role, and project type. The solution should allow for flexibility and future changes in the approval rules.
Which approach would be the most suitable for implementing this logic?

- A. Create a custom Apex class with a method to determine the appropriate approver based on the given criteria.
- B. Develop a custom Lightning component to handle the approval logic and integrate it into the expense reimbursement record page.
- C. Implement a custom formula field to calculate and determine the appropriate approver based on the given criteria.
- D. Use the Salesforce Approval Process feature and define multiple approval steps with entry criteria and approval assignments.

Answer: A

Explanation:
Creating a custom Apex class with methods to determine the appropriate approver is the most suitable approach when dealing with complex logic and the need for flexibility. This approach allows for centralized logic that can be easily maintained and updated as business requirements change.References: Apex Developer Guide - Apex Classes

NEW QUESTION # 40
There are user complaints about slow render times of a custom data table within a Visualforce page that loads thousands of Account records at once.
What can a developer do to help alleviate such issues?

- A. Use JavaScript remoting to query the accounts.
- B. Use the standard Account List controller and implement pagination.
- C. Upload a third-party data table library as a static resource.
- D. Use the transient keyword in the Apex code when querying the Account records.

Answer: B

Explanation:
Implementing pagination using the standard Account List controller in Visualforce is a proven method to improve performance when displaying large sets of data. Pagination allows only a subset of records to be fetched and displayed at a time, thereby reducing the load time of the page.

NEW QUESTION # 41
A developer Is tasked with ensuring that email addresses entered into the system for Contacts and for a Custom Object called Survey_Response__c do not belong to a list of blacklisted domains. The list of blacklisted domains will be stored In a custom object for ease of
maintenance by users. Note that the Survey_Response__c object is populated via a custom visualforce page.
What is the optimal way to implement this?

- A. Implement the logic in the Custom Visualforce page controller and call that method from an Apex trigger on Contact.
- B. Implement the logic in a helper class that is called by an Apex trigger on Contact and from the Custom Visualforce page controller.
- C. Implement the logic in a Validation Rule on the Contact and a validation Rule on the Survey_Response__c object.
- D. Implement the logic in an Apex trigger on Contact and also implement the logic within the Custom visualforce page controller.

Answer: B

NEW QUESTION # 42
Choose the correct definition for <apex:actionFunction>.

- A. Sends an AJAX request according to the time interval you specify. If this ever gets re-rendered, it resets
- B. Signifies which components should be processed by the server when an AJAX request is generated
- C. Adds AJAX support to another component (e.g. onClick, onMouseUp, onFocus, etc.)

- D. Allows for controller methods to be called directly from Javascript. Must be encapsulated in <apex:form> tags. Unlike actionSupport, these function<apex:actionPoller>s can be called directly from Javascript code
- E. Can be associated with an AJAX request (actionFunction/actionSupport/actionPoller) and shows content conditionally depending on the status of the request (in progress/complete). Use the "id" field to specify name; use "status" field on related components to connect them

Answer: D

NEW QUESTION # 43

An Apex trigger creates an Order__c record every time an Opportunity is won by a Sales Rep. Recently the trigger is creating two orders. What is the optimal method for a developer to troubleshoot this?

- A. Set up debug logging for every Sales Rep, then monitor the logs for errors and exceptions.
- B. Run the Apex Test Classes for the Apex trigger to ensure the code still has sufficient code coverage.
- C. add system.debug() statements to the code and use the Developer Console logs to trace the code.
- D. Turn off all Workflow Rules, then turn them on one at at time to see which one causes the error.

Answer: D

NEW QUESTION # 44
