BONUS!!! Download part of ITExamSimulator CIPT dumps for free: https://drive.google.com/open?id=1Y_hFwoZmd_mvMNIf3TEsBVd0vBccSe0S

The most important part of IAPP CIPT exam preparation is practice, and the right practice is often the difference between success and failure. ITExamSimulator also makes your preparation easier with practice test software to help you get hands-on exam experience before the actual Certified Information Privacy Technologist (CIPT) (CIPT) exam. After consistent practice, the final exam will not be too difficult for a student who has already practiced from real IAPP CIPT exam questions.

The CIPT certification exam covers a broad range of topics such as privacy laws and regulations, data protection frameworks, security technologies, data breaches, and risk management. Candidates who pass the exam demonstrate a thorough understanding of how to implement and manage privacy and data protection programs in their organizations. CIPT exam is ideal for IT professionals, data analysts, software developers, security professionals, and other professionals who work with personal data on a daily basis. It is also suitable for individuals who are looking to enhance their knowledge and skills in data privacy and protection to advance their careers.

IAPP CIPT Certification is an excellent choice for professionals seeking to establish themselves as experts in privacy technology. Certified Information Privacy Technologist (CIPT) certification demonstrates a candidate's knowledge and understanding of the latest developments in privacy regulations and their ability to manage privacy risks in technology products and services. With the increasing importance of privacy and data protection, the IAPP CIPT certification is a valuable credential for professionals in the

field.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q155-Q160):

NEW QUESTION # 155
When releasing aggregates, what must be performed to magnitude data to ensure privacy?

- A. Noise addition.
- B. Basic rounding.
- C. Value swapping.
- D. Top coding.

Answer: A

NEW QUESTION # 156
Which of the following is considered a client-side IT risk?

- A. Security policies focus solely on internal corporate obligations.
- B. An organization increases the number of applications on its server.
- C. An employee stores his personal information on his company laptop.
- D. IDs used to avoid the use of personal data map to personal data in another database.

Answer: C

Explanation:
An employee stores his personal information on his company laptop. This is considered a client-side IT risk because it involves the actions of an employee who has control over the use of their individual device.
Client-side IT risk refers to the potential threats that arise from devices or applications that are used by end-users or customers3. An employee storing his personal information on his company laptop is an example of client-side IT risk, as it exposes sensitive data to unauthorized access, theft or loss. The other options are examples of server-side IT risk, which involves threats that originate from systems or networks that host applications or services3.

NEW QUESTION # 157
What is an Access Control List?

- A. A list that indicates the type of permission granted to each individual.
- B. A list of steps necessary for an individual to access a resource.
- C. A list of individuals who have had their access privileges to a resource revoked.
- D. A list showing the resources that an individual has permission to access.

Answer: D

NEW QUESTION # 158
SCENARIO
Please use the following to answer the next questions:
Your company is launching a new track and trace health app during the outbreak of a virus pandemic in the US. The developers claim the app is based on privacy by design because personal data collected was considered to ensure only necessary data is captured, users are presented with a privacy notice, and they are asked to give consent before data is shared. Users can update their consent after logging into an account, through a dedicated privacy and consent hub. This is accessible through the 'Settings' icon from any app page, then clicking 'My Preferences', and selecting 'Information Sharing and Consent' where the following choices are displayed:
* "I consent to receive notifications and infection alerts";
* "I consent to receive information on additional features or services, and new products";
* "I consent to sharing only my risk result and location information, for exposure and contact tracing purposes";
* "I consent to share my data for medical research purposes"; and
* "I consent to share my data with healthcare providers affiliated to the company".
For each choice, an ON* or OFF tab is available The default setting is ON for all Users purchase a virus screening service for USS29 99 for themselves or others using the app The virus screening service works as follows:
* Step 1 A photo of the user's face is taken.
* Step 2 The user measures their temperature and adds the reading in the app
* Step 3 The user is asked to read sentences so that a voice analysis can detect symptoms
* Step 4 The user is asked to answer questions on known symptoms
* Step 5 The user can input information on family members (name date of birth, citizenship, home address, phone number, email and relationship).) The results are displayed as one of the following risk status "Low. "Medium" or "High" if the user is deemed at "Medium " or "High" risk an alert may be sent to other users and the user is Invited to seek a medical consultation and diagnostic from a healthcare provider.
A user's risk status also feeds a world map for contact tracing purposes, where users are able to check if they have been or are in dose proximity of an infected person If a user has come in contact with another individual classified as "medium' or 'high' risk an instant notification also alerts the user of this. The app collects location trails of every user to monitor locations visited by an infected individual Location is collected using the phone's GPS functionary, whether the app is in use or not however, the exact location of the user is "blurred' for privacy reasons Users can only see on the map circles The location data collected and displayed on the map should be changed for which of the following reasons?

- A. The radius used for location data exceeds official social distancing rules
- B. The blurriness does not allow users to know how close they are to an infected person
- C. The location data is loo precise
- D. The location data has not been pseudonymized

Answer: C

Explanation:
Location data that is too precise can reveal sensitive information about an individual's movements and activities. This could raise privacy concerns if this detailed location data is shared with third parties or used for purposes other than contact tracing. Pseudonymizing location data (option C) could also help protect user privacy but may not address concerns about overly precise location data.

NEW QUESTION # 159
Ivan is a nurse for a home healthcare service provider in the US. The company has implemented a mobile application which Ivan uses to record a patient's vital statistics and access a patient's health care records during home visits. During one visitj
