The Cisco world has become so competitive and challenging. To stay updated and meet the challenges of the market you have to learn new in-demand skills and upgrade your knowledge. With the Cisco 300-610 Certification Exam everyone can do this job nicely and quickly. The Designing Cisco Data Center Infrastructure (300-610) certification exam offers a great opportunity to validate the skills and knowledge.

Cisco 300-610 exam is intended for individuals who are responsible for designing data center infrastructure using Cisco technologies. This includes network architects, network designers, and data center engineers. 300-610 exam tests the individual's ability to design solutions that meet business and technical requirements, as well as the ability to assess and recommend technologies that are appropriate for specific data center environments.

Cisco 300-610 certification exam, also known as Designing Cisco Data Center Infrastructure (DCID), is a high-level certification designed for professionals who are interested in validating their skills in designing data center infrastructure solutions. Designing Cisco Data Center Infrastructure certification covers advanced topics related to data center network design, virtualization, automation, storage, and compute solutions. 300-610 Exam is designed to validate the candidate's knowledge and skills in designing complex data center infrastructure solutions using Cisco technologies.

## Latest 300-610 Dumps Pdf | Reliable 300-610: Designing Cisco Data Center Infrastructure 100% Pass

Our Desktop version is an application software that runs without an internet connection. It helps you to test yourself by giving the Designing Cisco Data Center Infrastructure (300-610) practice test. Our desktop version also keeps a record of your previous performance and it shows the improvement in your next 300-610 Practice Exam. With the help of ExamcollectionPass Designing Cisco Data Center Infrastructure (300-610) exam questions, you will be able to pass Cisco 300-610 certification exam with ease. When you invest in our product it will surely benefit your Designing Cisco Data Center Infrastructure (300-610) exam dumps.

To prepare for the Cisco 300-610 Exam, candidates can take advantage of a variety of study materials, including official Cisco training courses, practice exams, and study guides. Cisco also offers a range of online resources, including webinars, whitepapers, and technical documentation, to help candidates prepare for the exam. Additionally, candidates can participate in online communities and forums to connect with other professionals and share knowledge and experiences.

### Cisco Designing Cisco Data Center Infrastructure Sample Questions (Q229-Q234):

#### NEW QUESTION # 229

Drag and drop the components from the left onto the descriptions on the right that indicate what occurs to Fibre Channel fabric when that component fails.

□

**Answer:**

Explanation:

□

#### NEW QUESTION # 230

A network consultant reviews the requirements for the Storage Area Network (SAN) design. The proposed solution must offer a very efficient port usage and eliminate the need for a separate physical layer of switches and their associated ISLs. The design is not expected to require future expansion.

Which SAN topology must be used to meet these requirements?

- A. collapsed-core
- B. core-edge
- C. core-distribution-access
- D. edge-core-edge

**Answer: A**

#### NEW QUESTION # 231

An engineer must choose the World Wide Port Name for the Cisco UCS Fibre Channel virtual host bus adapter. Which identifier must be used?

- A. fe80::314e:4566:8702:bfb3d
- B. 20:00:00:25:B5:97:c3:ac
- C. iqn.2021-08.com.acme:3xxx
- D. naa.600a09840691712159764d

**Answer: B**

#### NEW QUESTION # 232

An engineer must integrate Layer 4 to Layer 7 services within Cisco ACI Fabric. The main requirement is to have a single point of configuration for network elements and firewall policies.

Which action meets these requirements?

- A. Define the service graph model as network policy mode.
- B. Define the service graph model as service policy mode.

- C. Deploy the firewalls in transparent mode.
- D. Deploy the firewalls in routed mode with PBR.

**Answer: B**

### NEW QUESTION # 233

Refer to the exhibit.

Server 1 fails to connect to the storage array over the Storage Area Network (SAN) of the Cisco NDS 9000 Series Switch. The requirements are to redesign the storage network and keep these considerations in mind:

The traffic from each of the server must be redundant and isolated.

The design must tolerate hardware and software failures and upgrades of SAN fabric devices.

Which action must be taken to meet these requirements?

- A. Place an additional Fibre Channel switch to create two physically independent storage fabrics.
- B. Add an additional supervisor to the Fibre Channel switch to support nondisruptive upgrades.
- **C. Enable NPV and F-Port-channel on ports that face Server 1 on the Fibre Channel switch to create redundant paths.**
- D. Create a SAN port channel that faces the storage device to sustain a link failure.

**Answer: C**

### NEW QUESTION # 234
