Obtaining a certificate for an exam can have many benefits, and it will build up your competitive force in the job market and help you to enter a big enterprise and so on. AWS-Solutions-Architect-Associate exam braindumps of us will help you get the certificate successfully. With professional experts to revise the questions and answers, AWS-Solutions-Architect-Associate Exam Braindumps are of high quality. AWS-Solutions-Architect-Associate exam dumps contain knowledge points, and it can help you have a good command of the exam. Choose us, it will become more easily for you to pass the exam.

The AWS-Solutions-Associate exam consists of 65 multiple-choice and multiple-response questions, which you must complete within 130 minutes. AWS-Solutions-Architect-Associate Exam is available in multiple languages and can be taken at a testing center or online from the comfort of your own home or office.

Easy to Use ExamsTorrent Amazon AWS-Solutions-Architect-Associate Practice Questions Formats

We offer free demos as your experimental tryout before downloading our real AWS-Solutions-Architect-Associate exam questions. For more textual content about practicing exam questions, you can download our products with reasonable prices and get your practice begin within 5 minutes. After getting to know our AWS-Solutions-Architect-Associate Test Guide by free demos, many exam candidates had their volitional purchase. So our AWS-Solutions-Architect-Associate latest dumps are highly effective to make use of.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q441-Q446):

NEW QUESTION # 441

You need to set up security for your VPC and you know that Amazon VPC provides two features that you can use to increase security for your VPC: Security groups and network access control lists (ACLs). You start to look into security groups first. Which statement below is incorrect in relation to security groups?

- A. Support allow rules and deny rules.
- B. Are stateful: Return traffic is automatically allowed, regardless of any rules.
- C. Evaluate all rules before deciding whether to allow traffic.
- D. Operate at the instance level (first layer of defense).

Answer: A

Explanation:

Amazon VPC provides two features that you can use to increase security for your VPC:

Security groups-Act as a firewall for associated Amazon EC2 instances, controlling both inbound and outbound traffic at the instance level and supports allow rules only.

Network access control lists (ACLs)-Act as a firewall for associated subnets, controlling both inbound and outbound traffic at the subnet level and supports allow rules and deny rules.

NEW QUESTION # 442

A company has a large fleet of vehicles that are equipped with internet connectivity to send telemetry to the company. The company receives over 1 million data points every 5 minutes from the vehicles. The company uses the data in machine learning (ML) applications to predict vehicle maintenance needs and to preorder parts. The company produces visual reports based on the captured data. The company wants to migrate the telemetry ingestion, processing, and visualization workloads to AWS. Which solution will meet these requirements?

- A. Use Amazon Timestream to for LiveAnalytics to store the data points. Grant Amazon SageMaker permission to access the data for processing. Use Amazon Athena to visualize the data.
- B. Use Amazon Neptune to store the data points. Use Amazon Kinesis Data Streams to ingest data from Neptune into an AWS Lambda function for processing. Use Amazon QuickSight to visualize the data.
- C. Use Amazon DynamoDB to store the data points. Use DynamoDB Connector to ingest data from DynamoDB into Amazon EMR for processing. Use Amazon QuickSight to visualize the data.
- **D. Use Amazon Timestream for LiveAnalytics to store the data points. Grant Amazon SageMaker permission to access the data for processing. Use Amazon QuickSight to visualize the data.**

Answer: D

Explanation:

Amazon Timestream: Purpose-built time series database optimized for telemetry and IoT data ingestion and analytics.

Amazon SageMaker: Provides ML capabilities for predictive maintenance workflows.

Amazon QuickSight: Efficiently generates interactive, real-time visual reports from Timestream data.

Optimized for Scale: Timestream efficiently handles large-scale telemetry data with time-series indexing and queries.

Amazon Timestream Documentation

NEW QUESTION # 443

A company's operations teams has an existing Amazon S3 bucket configured to notify an Amazon SQS queue when new object are created within the bucket. The development team also wants to receive events when new objects are created. The existing operations team workflow must remain intact.

Which solution would satisfy these requirements?

- A. Create another SQS queue Update the S3 events in bucket to also update the new queue when a new object is created.
- **B. Create an Amazon SNS topic and SQS queue for the Update. Update the bucket to send events to the new topic. Updates both queues to poll Amazon SNS.**
- C. Create an Amazon SNS topic and SQS queue for the bucket updates. Update the bucket to send events to the new topic Add subscription for both queue in the topic.
- D. Create a new SQS queue that only allows Amazon S3 to access the queue, Update Amazon S3 update this queue when a new object is created

Answer: B

NEW QUESTION # 444

A rapidly growing global ecommerce company is hosting its web application on AWS. The web application includes static content and dynamic content. The website stores online transaction processing (OLTP) data in an Amazon RDS database. The website's users are experiencing slow page loads.

Which combination of actions should a solutions architect take to resolve this issue? (Select TWO.)

- A. Host the dynamic web content in Amazon S3
- **B. Create a t wd replica tor the RDS DB instance.**

- C. Configure an Amazon Redshift cluster.
- **D. Set up an Amazon CloudFront distribution**
- E. Configure a Multi-AZ deployment for the RDS DB instance

Answer: B,D

Explanation:

To resolve the issue of slow page loads for a rapidly growing e-commerce website hosted on AWS, a solutions architect can take the following two actions:

1. Set up an Amazon CloudFront distribution
2. Create a read replica for the RDS DB instance

Configuring an Amazon Redshift cluster is not relevant to this issue since Redshift is a data warehousing service and is typically used for the analytical processing of large amounts of data.

Hosting the dynamic web content in Amazon S3 may not necessarily improve performance since S3 is an object storage service, not a web application server. While S3 can be used to host static web content, it may not be suitable for hosting dynamic web content since S3 doesn't support server-side scripting or processing.

Configuring a Multi-AZ deployment for the RDS DB instance will improve high availability but may not necessarily improve performance.

NEW QUESTION # 445

A company wants a flexible compute solution that includes Amazon EC2 instances and AWS Fargate. The company does not want to commit to multi-year contracts.

Which purchasing option will meet these requirements MOST cost-effectively?

- **A. Purchase a 1-year Compute Savings Plan with the No Upfront option.**
- B. Purchase a 1-year Compute Savings Plan with the All Upfront option.
- C. Purchase a 1-year EC2 Instance Savings Plan with the All Upfront option.
- D. Purchase a 1-year Compute Savings Plan with the Partial Upfront option.

Answer: A

Explanation:

To optimize costs for both Amazon EC2 and AWS Fargate, the best option is a Compute Savings Plan because it offers flexibility across instance families, Regions, and compute options including EC2, AWS Fargate, and AWS Lambda.

Unlike EC2 Instance Savings Plans, which apply only to specific instance families, Compute Savings Plans apply across multiple services.

Since the company does not want to commit to multi-year contracts or large upfront payments, the 1-year No Upfront Compute Savings Plan provides the greatest flexibility with no upfront capital commitment, while still offering cost savings over On-Demand pricing.

This option also aligns with cost-optimization best practices by allowing for scalability and service mix flexibility.
