

Reliable F5 F5CAB4 Exam Preparation | New F5CAB4 Practice Materials

What's more, part of that DumpsTorrent F5CAB4 dumps now are free: https://drive.google.com/open?id=10fDU2PV-LA_N114BRPgNITEoPcQC_rza

Do you need to find a high paying job for yourself? Well, by passing the F5CAB4, you will be able to get your dream job. Make sure that you are buying our F5CAB4 brain dumps pack so you can check out all the products that will help you come up with a better solution. Our F5CAB4 Exam Material includes all F5 certification exams detailed questions & answers files, We offer latest F5CAB4 certifications preparation material which comes with guarantee that you will pass F5CAB4 exams in the first attempt.

F5 F5CAB4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Apply procedural concepts required to manage the state of a high availability pair: This domain covers controlling and monitoring failover states in high availability pairs, including forcing standby offline modes, reporting failover status, and verifying device trust.
Topic 2	<ul style="list-style-type: none"> Identify and report current device status: This domain covers monitoring BIG-IP operational status through LCD panels, dashboards, Network Map, GUI TMSH commands, and checking high availability states.
Topic 3	<ul style="list-style-type: none"> Explain authentication methods: This section focuses on user management including creating modifying users, configuring remote authentication providers, and implementing group-based access control.
Topic 4	<ul style="list-style-type: none"> Explain config sync: This section focuses on configuration synchronization procedures, identifying sync errors, determining sync necessity, checking sync status, and comparing configuration timestamps.
Topic 5	<ul style="list-style-type: none"> List which log files could be used to find events and or hardware issues: This section teaches identification of key log files (var log ltm, secure, audit), understanding event severity levels, and interpreting log messages.

New F5CAB4 Practice Materials - F5CAB4 Instant Download

All the F5CAB4 study materials of our company are designed by the experts and professors in the field. The quality of our study

materials is guaranteed. According to the actual situation of all customers, we will make the suitable study plan for all customers. If you buy the F5CAB4 Study Materials from our company, we can promise that you will get the professional training to help you pass your exam easily. By our professional training, you will pass your exam and get the related certification in the shortest time.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q24-Q29):

NEW QUESTION # 24

A BIG-IP administrator is troubleshooting inconsistent configuration objects on devices in a device group.

The administrator uses the command:

```
tmsh run /cm watch-devicegroup-device
```

and observes the following output:

```
devices <devgroup> device clu_id cl_orig cl_time last_sync
```

```
20:21 sync_test bigip_a 3273 bigip_a 14:27:00
```

```
20:21 sync_test bigip_b 1745 bigip_b 13:52:34 13:42:04
```

```
20:21 sync_test bigip_c 1745 bigip_a 13:52:34 13:42:04
```

What two conclusions can be made about this output? (Choose two answers)

- **A. bigip_a has the latest configuration.**
- B. The correct configuration exists on bigip_a and bigip_c because their cluster times match.
- C. The config from bigip_c was synced to the other devices in the device group during the most recent ConfigSync.
- **D. Two of the devices in the device group have a configuration that is out of date.**
- E. The correct configuration exists on bigip_b and bigip_c because their cluster times match.

Answer: A,D

Explanation:

watch-devicegroup-device shows (among other columns) the commit ID (cid.id / shown here as clu_id), the originating device for that commit (cid-orig / shown here as cl_orig), and the time the configuration change was made (cid.time / shown here as cl_time). The highest/newest commit ID and its time represent the most recent configuration change seen among the devices.

(clouddocs.f5.com)

* bigip_a has the latest configuration (A) because it shows commit ID 3273 at 14:27:00, which is newer than commit ID 1745 at 13:52:34 on bigip_b and bigip_c. (clouddocs.f5.com)

* Two devices are out of date (B) because bigip_b and bigip_c are still on the older commit ID 1745, so they do not match the latest commit shown on bigip_a. (clouddocs.f5.com) Why the other options are not supported by this output:

* C is not supported: bigip_c is not showing a newer commit than the others; it's on the older commit (1745), so it's not the source of the most recent change. The output's cid-orig column is what tells you where the change was made. (clouddocs.f5.com)

* D/E are incorrect logic: matching cid.time between two devices only indicates they share the same change timestamp/commit, not that it is the correct or latest configuration. The "latest" is indicated by the newest commit ID/time (here, bigip_a).

(clouddocs.f5.com)

NEW QUESTION # 25

What is the tmsh command to list the IP ranges that can access the management interface via SSH? (Choose one answer)

- **A. tmsh list /sys sshd allow**
- B. tmsh show /sys sshd allow
- C. tmsh list /sys sshd /etc/hosts.allow
- D. tmsh show /sys sshd /etc/hosts.allow

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

On BIG-IP systems, SSH access restrictions are configured under the /sys sshd object. The allow property defines the IP addresses or networks permitted to connect to the management interface using SSH.

The list command is used to display the current configuration settings.

Therefore, tmsh list /sys sshd allow correctly displays the configured allowed IP ranges.

Why the other options are incorrect:

A (show) displays runtime or statistical information, not configuration values.

C and D incorrectly reference /etc/hosts.allow; BIG-IP manages SSH access through TMSH objects, not by directly listing host files

in this context.

NEW QUESTION # 26

New Syslog servers have been deployed in an organization. The BIG-IP Administrator must reconfigure the BIG-IP system to send log messages to these servers.

In which location in the Configuration Utility can the BIG-IP Administrator make the needed configuration changes to accomplish this? (Choose one answer)

- A. System > Configuration > Local Traffic
- **B. System > Logs > Configuration**
- C. System > Configuration > Device
- D. System > Logs > Audit

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

On a BIG-IP system, remote syslog server configuration is managed through the logging configuration framework. In the Configuration Utility, this is accessed via:

System > Logs > Configuration

This section allows the administrator to:

Define remote syslog destinations

Configure log publishers

Control which log types (system, audit, LTM, ASM, etc.) are forwarded to external syslog servers Why the other options are incorrect:

A . System > Configuration > Local Traffic

Used for traffic management settings, not logging.

C . System > Logs > Audit

Displays audit log settings and content but does not configure remote syslog destinations.

D . System > Configuration > Device

Used for device-level settings such as hostname and platform configuration, not logging.

Therefore, the correct location to reconfigure BIG-IP to send logs to new syslog servers is System > Logs > Configuration.

NEW QUESTION # 27

A BIG-IP Administrator must determine if a Virtual Address is configured to fail over to the standby member of a device group. In which area of the Configuration Utility can this be confirmed?

- A. Device Management > Traffic Groups
- **B. Local Traffic > Virtual Servers**
- C. Device Management > Overview
- D. Device Management > Devices

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: To re27port the current status of high availability for specific traffic, an administrator must verify the Traffic Group association28. In the Configuration Utility, Virtual Server properties include the Virtual Address settings where the 'Traffic Group' is assigned29292929. If the Virtual Address is assigned to a floating traffic group (like traffic-group-1), it is configured to fail over to the standby member30303030.

NEW QUESTION # 28

A BIG-IP Administrator must determine if a Virtual Address is configured to fail over to the standby member of a device group. In which area of the Configuration Utility can this be confirmed?

- A. Device Management > Traffic Groups
- **B. Local Traffic > Virtual Servers**
- C. Device Management > Overview

- D. Device Management > Devices

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: To re27port the current status of high availability for specific traffic, an administrator must verify the Traffic Group association28. In the Configuration Utility, Virtual Server properties include the Virtual Address settings where the 'Traffic Group' is assigned29292929. If the Virtual Address is assigned to a floating traffic group (like traffic-group-1), it is configured to fail over to the standby member30303030.

NEW QUESTION # 29

.....

Our company's F5CAB4 exam questions are reliable packed with the best available information. It is always relevant to the real F5CAB4 exam as it is regularly updated by the best and the most professional experts. As long as you study with our F5CAB4 learning braindumps, you will be surprised by the most accurate exam questions and answers that will show up exactly in the real exam. So what are you waiting for? Just put them to the cart and buy!
