After we develop a new version, we will promptly notify you. At 350-501, you have access to the best resources in the industry. We guarantee that you absolutely don't need to spend extra money to buy other products. 350-501 practice materials will definitely make you feel value for money. If you are really in doubt, you can use our trial version of our 350-501 Exam Questions first. We believe that you will definitely make a decision immediately after use!

Cisco 350-501: Implementing and Operating Cisco Service Provider Network Core Technologies Exam Certification Path

Cisco 350-501: Implementing and Operating Cisco Service Provider Network Core Technologies Exam is affiliated with the CCNP Service Provider and Cisco Accredited Professional-Service Provider VPN Services Implementation certifications. This is the official prerequisite for this exam. However, the course, Integrating VPN Services from Cisco Service Provider, allows applicants to prepare for this exam and is highly recommended.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q528-Q533):

NEW QUESTION # 528

Refer to the exhibit:

Which statement about the status of the neighbor relationship between R1 and R2 is true?

- A. The neighbor relationship is down because the two routers are in the same subnet.
- B. The neighbor relationship is down because R2 is operating as a Level 1 router and the two routers are in different area
- C. The neighbor relationship is down because the two routers are configured with different area types

- D. The neighbor relationship is up because R2 is level 1 and level 2 router.

Answer: A

NEW QUESTION # 529

An engineer is developing a configuration script to enable dial-out telemetry streams using gRPC on several new devices. TLS must be disabled on the devices. Which configuration must the engineer apply on the network?

- A)
- B)
- C)
- D)

- A. Option C
- B. Option D
- **C. Option A**
- D. Option B

Answer: C

NEW QUESTION # 530

A network engineer has configured TE tunnels in the MPLS provider core. Which two steps ensure traffic traverse? (Choose two.)

- **A. The IGP metric of a tunnel is configured to prefer a certain path**
- **B. Forwarding adjacency features allows a tunnel to be installed in the IGP table as a link.**
- C. ECMP between tunnels allows RSVP to function correctly.
- D. A tunnel weight is configured in SPF database the same way as a native link.
- E. Static routes is the only option for directing traffic into a tunnel.

Answer: A,B

NEW QUESTION # 531

Refer to the exhibit. Company A is connected to multiple upstream ISPs, with ISP_A serving as the primary upstream ISP. The company A subnet 172.43.232.0 should be announced to the secondary ISP_B only when the FTP server with IP address 10.10.1.1 is not accessible via the primary ISP. Which configuration must be applied on R1?

- A. neighbor 10.182.213.3 prefix-map Non-RIB Condition-map Advertise-route
- **B. neighbor 10.182.213.3 advertise-map Advertise-route non-exist-map Non-RIB**
- C. neighbor 10.182.213.3 route-map Advertise-route Condition-map Non-RIB
- D. neighbor 10.182.213.2 Condition-map Non-RIB prefix-map Advertise-route

Answer: B

Explanation:

advertise-map and non-exist-map BGP commands are used. The To control the advertisement of the 172.43.232.0/23 subnet to ISP_B, the advertise-map specifies the route to advertise (in this case, the route-map Advertise-route), and the non-exist-map defines the condition under which the route is advertised (in this case, when the FTP server with IP 10.10.1.1 is not accessible via ISP_A).

Advertise-route route-map matches the subnet 172.43.232.0/23.

The

Non-RIB route-map matches the FTP server IP address 10.10.1.1. If the route to the FTP server is absent in the routing table (indicating The inaccessibility), the subnet will be advertised to ISP_B.

NEW QUESTION # 532

Drag and drop the functionalities from the left onto the target fields on the right.
