Free JN0-105 Learning Cram | Key JN0-105 Concepts

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our JN0-105 actual exam will help you make a good learning plan. You can have a model test in limited time by our JN0-105 Study Materials, if you finish the model test, our system will generate a report according to your performance. And in this way, you can have the best pass percentage on your JN0-105 exam.

Our JN0-105 exam braindumps will give you a feeling that they will really make you satisfied. I know that we don't say much better than letting you experience it yourself. We very much welcome you to download the trial version of our JN0-105 practice engine. Our ability to provide users with free trial versions of our JN0-105 Study Materials is enough to prove our sincerity and confidence. Just free download the JN0-105 learning guide, you will love it for sure!

Key JN0-105 Concepts | JN0-105 New Exam Materials

Take advantage of the UpdateDumps's Juniper training materials to prepare for the exam, let me feel that the exam have never so easy to pass. This is someone who passed the examination said to us. With UpdateDumps Juniper JN0-105 Exam Certification training, you can sort out your messy thoughts, and no longer twitchy for the exam. UpdateDumps have some questions and answers provided free of charge as a trial. If I just said, you may be not believe that. But as long as you use the trial version, you will believe what I say. You will know the effect of this exam materials.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 2	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 3	• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 4	• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q59-Q64):

NEW QUESTION # 59
Exhibit
Exhibit
[edit]
root# set system host-name TEST_DEVICE [edit]
root# commit
[edit]
'system'
Missing mandatory statement: 'root-authentication' error: commit failed: (missing mandatory statements) [edit] root# You are configuring a new device.
Which action solves the error shown in the exhibit?

- A. configuring a non-root username and password
- B. loading the factory-default configuration
- C. configuring a password for the root account
- D. reinstalling Junos

Answer: C

Explanation:
The error message in the exhibit indicates that the root-authentication statement is missing, which is mandatory for committing the configuration. In Junos OS, it is required to set a password for the root account to commit any configuration changes. This is a security measure to ensure that unauthorized users cannot access the device's configuration mode. To solve the error shown in the exhibit, configuring a password for the root account is necessary. This can be done by using the set system root-authentication plain-text-password command, after which the user will be prompted to enter a new password for the root account.

NEW QUESTION # 60
Exhibit
[edit system archival] user@router# show configuration {
transfer-on-commit; archive-sites {
"scp://user@172.15.100.2 : /archive" password ## SECRET-DATA
"ftp://user@10.210.9.178:/archive" password "$9..."; ## SECRET-DATA
.
Referring to the exhibit, where are the configuration backup files stored?

- A. Files are stored to the SCP site and the FTP site simultaneously.
- B. Files are stored to the SCP site and the FTP site in a round-robin manner.
- C. Files are stored to the SCP site but if the transfer fails, then to the FTP site.
- D. Files are stored to any site as selected by Junos internally.

Answer: A

Explanation:
In Junos OS, the archival configuration under [edit system] allows for the automatic backup of configuration files to designated locations upon commit. When multiple archive-sites are specified, as shown in the exhibit with both SCP and FTP sites listed, the device does not choose between them or use them in a round-robin manner. Instead, it attempts to transfer the configuration backup files to all specified sites simultaneously upon each commit. This ensures redundancy and increases the likelihood that a backup will be successfully stored even if one of the transfer methods or destinations fails.

NEW QUESTION # 61
Exhibit
[edit]
user@routerl set interfaces ge-0/1/2 unit 0 family inet address 172.16.101.1/24 [edit] user@router# commit check configuration check succeeds
[edit]
user@router#
You need to configure interface ge-0/1/2 with an IP address of 172.16.100.1/24. You have accidentally entered 172.16.101.1/24 as shown in the exhibit.
Which command should you issue to solve the problem?

- A. [edit] user@router# rollback 2
- B. [edit] userOrouter# rollback 0
- C. (edit] user@router# rollback 1
- D. [edit] user@routeri rollback rescue

Answer: C

Explanation:
If you've committed a configuration and then need to revert to the previous configuration, therollback command is used. Since the incorrect IP address has not been committed, as indicated by thecommit check command being successful, issuingrollback 1will undo the changes made in the current session, which includes the accidental entry of the IP address.

NEW QUESTION # 62
An administrator configures a router's interface with an IPv4 address and subnet mask. The administrator also confirms that this interface is in an up state.
In this scenario, which two route types are created on the local router? (Choose two.)

- A. a direct route
- B. a dynamic route
- C. a local route
- D. a static route

Answer: A,C

Explanation:
When an interface on a router is configured with an IPv4 address and is in an up state, two types of routes are automatically created in the routing table: a local route and a direct route, making B and D the correct answers.
The local route represents the interface's IP address itself, indicating that the router can directly receive packets addressed to this IP.
The direct route represents the subnet or network segment to which the interface is connected, indicating that the router can directly forward packets to destinations within this subnet.

NEW QUESTION # 63
You have configured some interfaces on a Junos device; however, you have not yet committed the configuration.
What happens if you issue the rollback 0 command in this scenario?

- A. The interface changes you made are discarded.
- B. The factory default configuration is loaded.
- C. The messages.log file is deleted.

- D. The Junos device is rebooted.

Answer: A

Explanation:
Issuing the rollback 0 command in Junos OS will discard any uncommitted changes and revert to the last committed configuration. This command effectively cancels any configuration changes that have been made but not yet committed, ensuring that the device returns to its previous stable state.
