

Free PDF Quiz 2026 High-quality ISC CISSP: Lab Certified Information Systems Security Professional (CISSP) Questions

P.S. Free 2026 ISC CISSP dumps are available on Google Drive shared by Pass4sures: <https://drive.google.com/open?id=1KFG5F4SPKMhbpKJLI7iB-yD-hYq-rTDh>

If you want to get promotions or high-paying jobs in the ISC sector, then it is important for you to crack the Certified Information Systems Security Professional (CISSP) (CISSP) certification exam. The ISC CISSP certification has become the best way to validate your skills and accelerate your tech career. CISSP Exam applicants who are doing jobs or busy with their other matters usually don't have enough time to study for the test.

The CISSP exam covers eight domains of information security, including security and risk management, asset security, security architecture and engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security. To become a CISSP certified professional, candidates must have at least five years of experience in two or more of these domains and pass the CISSP exam.

To qualify for the CISSP exam, candidates must have at least five years of professional experience in the field of information security. They must also adhere to the ISC2 code of ethics and pass the exam. CISSP exam consists of 250 multiple-choice questions that must be completed within six hours. Candidates who pass the exam are awarded the CISSP certification, which is valid for three years. They must then renew their certification by earning continuing education credits or by retaking the exam.

ISC CISSP (Certified Information Systems Security Professional) certification exam is a globally recognized certification for information security professionals. Certified Information Systems Security Professional (CISSP) certification is designed to test and validate the expertise of individuals in the field of information security. Certified Information Systems Security Professional (CISSP) certification exam covers a wide range of topics related to information security, including security and risk management, asset security, security engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security.

CISSP Exam Lab Questions & Professional CISSP Valid Test Preparation Pass Success

According to the survey of our company, we have known that a lot of people hope to try the CISSP test training materials from our company before they buy the CISSP study materials. So a lot of people long to know the CISSP study questions in detail. In order to meet the demands of all people, our company has designed the trail version for all customers. We can promise that our company will provide the demo of the CISSP learn prep for all people to help them make the better choice. It means you can try our demo and you do not need to spend any money.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1455-Q1460):

NEW QUESTION # 1455

Which of the following is a risk matrix?

- A. A two-dimensional picture of risk for organizations, products, projects, or other items of interest.
- B. A database of risks associated with a specific information system.
- C. A table of risk management factors for management to consider.

- D. A tool for determining risk management decisions for an activity or system.

Answer: A

NEW QUESTION # 1456

Refer to the information below to answer the question.

A large organization uses unique identifiers and requires them at the start of every system session. Application access is based on job classification. The organization is subject to periodic independent reviews of access controls and violations. The organization uses wired and wireless networks and remote access. The organization also uses secure connections to branch offices and secure backup and recovery strategies for selected information and processes.

In addition to authentication at the start of the user session, best practice would require re-authentication

- A. periodically during a session.
- B. at system sign-off.
- **C. after a period of inactivity.**
- D. for each business process.

Answer: C

NEW QUESTION # 1457

The type of discretionary access control (DAC) that is based on an individual's identity is also called:

- A. Non-Discretionary Access Control
- B. Lattice-based Access control
- **C. Identity-based Access control**
- D. Rule-based Access control

Answer: C

Explanation:

An identity-based access control is a type of Discretionary Access Control (DAC) that is based on an individual's identity.

DAC is good for low level security environment. The owner of the file decides who has access to the file.

If a user creates a file, he is the owner of that file. An identifier for this user is placed in the file header and/or in an access control matrix within the operating system.

Ownership might also be granted to a specific individual. For example, a manager for a certain department might be made the owner of the files and resources within her department. A system that uses discretionary access control (DAC) enables the owner of the resource to specify which subjects can access specific resources.

This model is called discretionary because the control of access is based on the discretion of the owner. Many times department managers, or business unit managers, are the owners of the data within their specific department. Being the owner, they can specify who should have access and who should not.

NEW QUESTION # 1458

When implementing a data classification program, why is it important to avoid too much granularity?

- A. The process will be perceived as having value
- **B. The process will require too many resources**
- C. It will be difficult to assign ownership to the data
- D. It will be difficult to apply to both hardware and software

Answer: B

NEW QUESTION # 1459

When performing an investigation with the potential for legal action, what should be the analyst's FIRST consideration?

- A. Data decryption
- **B. Authorization to collect**
- C. Chain-of-custody
- D. Court admissibility

Answer: B

Explanation:

The analyst's first consideration when performing an investigation with the potential for legal action is authorization to collect. Authorization to collect is the process of obtaining the necessary permissions and approvals to collect the evidence from the relevant sources, such as the owners, custodians, or authorities.

Authorization to collect is essential to ensure the legality, validity, and admissibility of the evidence, as well as to protect the rights and privacy of the parties involved. Authorization to collect can also prevent any legal or ethical issues that may arise from unauthorized or improper collection of evidence. The other options are not the first considerations when performing an investigation with the potential for legal action, as they either come after the collection of evidence, or do not relate to the legal aspect.
