## CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.</li> </ul>

## CompTIA SecurityX Certification Exam Sample Questions (Q217-Q222):

### NEW QUESTION # 217

PKI can be used to support security requirements in the change management process. Which of the following capabilities does PKI provide for messages?

- A. Delivery receipts
- B. Attestation
- C. Confidentiality
- **D. Non-repudiation**

**Answer: D**

Explanation:

Public Key Infrastructure (PKI) supports change management by securing messages (e.g., approvals, updates). Non-repudiation, provided via digital signatures, ensures a sender cannot deny sending a message, critical for auditability in change processes.

### NEW QUESTION # 218

A company wants to protect against the most common attacks and rapidly integrate with different programming languages. Which of the following technologies is most likely to meet this need?

- **A. RASP**
- B. DAST
- C. Cloud-based IDE
- D. NIPS

**Answer: A**

Explanation:

Comprehensive and Detailed Step-by-Step

Runtime Application Self-Protection (RASP) (A) monitors and protects applications in real time by detecting and blocking attacks

as they occur. Unlike traditional security solutions, RASP is integrated into the application itself, meaning it works regardless of the programming language used. It effectively mitigates common vulnerabilities such as SQL injection, XSS, and buffer overflows. Dynamic Application Security Testing (DAST) (C) is a passive scanning approach that may not prevent attacks in real-time, while Network Intrusion Prevention Systems (NIPS) (D) focuses on network traffic, not application-layer security.

### NEW QUESTION # 219

A security analyst is reviewing the following log:

Time	File type	Size	Antivirus status	Location
11:25	txt	25mb	block	c:\
11:27	txt	10mb	allow	c:\temp
11:29	doc	37mb	block	c:\users\user1\Desktop
11:32	pdf	13mb	allow	c:\users\user2\Downloads
11:35	txt	49mb	allow	c:\users\user3\Documents

Which of the following possible events should the security analyst investigate further?

- A. A macro that was prevented from running
- **B. A text file containing passwords that were leaked**
- C. A malicious file that was run in this environment
- D. A PDF that exposed sensitive information improperly

**Answer: B**

Explanation:

Based on the log provided, the most concerning event that should be investigated further is the presence of a text file containing passwords that were leaked. Here's why:

**Sensitive Information Exposure:** A text file containing passwords represents a significant security risk, as it indicates that sensitive credentials have been exposed in plain text, potentially leading to unauthorized access.

**Immediate Threat:** Password leaks can lead to immediate exploitation by attackers, compromising user accounts and sensitive data. This requires urgent investi

### NEW QUESTION # 220

A security architect wants to develop a baseline of security configurations. These configurations automatically will be utilized machine is created. Which of the following technologies should the security architect deploy to accomplish this goal?

- A. Short
- B. GASB
- **C. Ansible**
- D. CMDB

**Answer: C**

Explanation:

To develop a baseline of security configurations that will be automatically utilized when a machine is created, the security architect should deploy Ansible. Here's why:

**Automation:** Ansible is an automation tool that allows for the configuration, management, and deployment of applications and systems. It ensures that security configurations are consistently applied across all new machines.

**Scalability:** Ansible can scale to manage thousands of machines, making it suitable for large enterprises that need to maintain consistent security configurations across their infrastructure.

**Compliance:** By using Ansible, organizations can enforce compliance with security policies and standards, ensuring that all systems are configured according to best practices.

### NEW QUESTION # 221

A company's internal network is experiencing a security breach, and the threat actor is still active. Due to business requirements, users in this environment are allowed to utilize multiple machines at the same time.

Given the following log snippet:

Time	User	Process	Status	Machine
10:11	user-a	.exe	blocked	machine02
10:15	user-b	setup.exe	blocked	machine02
10:15	user-A	appwiz.exe	blocked	machine01
10:16	user-c	appwiz.CPL	blocked	machine03
11:17	user-c	cmd.exe	blocked	machine03
11:18	user-h	msconfig.exe	blocked	machine04
11:19	user-d	firefox.exe	blocked	machine04
11:19	user-d	cmd.com	blocked	machine01

Which of the following accounts should a security analyst disable to best contain the incident without impacting valid users?

- A. user-c
- B. user-a
- C. user-d
- D. user-b

**Answer: A**

Explanation:

User user-c is showing anomalous behavior across multiple machines, attempting to run administrative tools such as cmd.exe and appwiz.CPL, which are commonly used by attackers for system modification. The activity pattern suggests a lateral movement attempt, potentially indicating a compromised account.

user-a (A) and user-b (B) attempted to run applications but only on one machine, suggesting less likelihood of compromise.

user-d (D) was blocked running cmd.com, but user-c's pattern is more consistent with an attack technique.
