## Exam Salesforce-MuleSoft-Developer-I Reviews, Salesforce-MuleSoft-Developer-I Training Questions

TestBraindump offers a full refund guarantee according to terms and conditions if you are not satisfied with our Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) product. You can also get free Salesforce Dumps updates from TestBraindump within up to 365 days of purchase. This is a great offer because it helps you prepare with the latest Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) dumps even in case of real Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) exam changes. TestBraindump gives its customers an opportunity to try its Salesforce-MuleSoft-Developer-I product with a free demo.

## Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q82-Q87):

**NEW QUESTION # 82**
How are multiple conditions used in a Choice router to route events?

- A. To find the FIRST true condition, then distribute the event to the ONE matched route.
- B. To find the FIRST true condition, then route the same event to the matched route and ALL FOLLOWING routes
- C. None of these
- D. To route the same event to the matched route of EVERY true condition

**Answer: A**

Explanation:
Choice router finds the FIRST true condition, then distribute the event to the ONE matched route.
MuleSoft Doc Ref : https://docs.mulesoft.com/mule-runtime/4.1/choice-router-concept The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.
Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.

## NEW QUESTION # 83
A Mule application's HTTP Listener is configured with the HTTP protocol. The HTTP listeners port attribute is configured with a property placeholder named http.port. The mule application sets the http.port property placeholder's value to 9090 The Mule application is deployed to CloudHub without setting any properties in the Runtime manager Properties tab and a log message reports the status of the HTTP listener after the Mule application deployment completes.
After the mule applications is deployed, what information is reported in the worker logs related to the port on which the Mule application's HTTP Listener listens?

- A. The HTTP Listener is listening on port 8081
- B. The HTTP Listener is listening on port 9090
- C. The HTTP Listener failed to bind to the port and is not listening for connections
- D. The HTTP Listener is listening on port 80

**Answer: A**

Explanation:
Cloudhub expose services on port 8081 and override value in http.port with this one .
Sample log in Runtime Manager is below
21:15:53.148 08/08/2021 Worker-0 ArtifactDeployer.start.01 INFO
Listening for connections on 'http://0.0.0.0:8081'

## NEW QUESTION # 84
Refer to exhibits.
What message should be added to Logger component so that logger prints "The city is Pune" (Double quote should not be part of logged message)?

- A. The city is #[payload.City]
- B. The city is + #[payload.City]
- C. #["The city is" ++ payload.City]
- D. #[The city is ${payload.City}

**Answer: A**

Explanation:
Correct answer is The city is #[payload.City]
Answer can get confused with the option #["The city is" ++ payload.City] But note that this option will not print the space between is and city name. This will print The city isPune

## NEW QUESTION # 85
An On Table Row Database listener retrieves data from a table that contains record_id, an increasing numerical column.
How should the listener be configured so it retrieves new rows at most one time?

- A. Set the target to the record_id column
- B. Set the ObjectStore to store the last retrieved record_id value
- C. Set the target to store the last retrieved record_id value
- D. Set the watermark column to the record id column

**Answer: D**

## NEW QUESTION # 86

Refer to the exhibits.

The Validation component in the private flow throws an error. What response message is returned to a client request to the main flow's HTTP Listener?

- A. Validation Error
- B. Error - main flow
- C. Success - main flow
- D. Error - private flow

**Answer: B**

Explanation:
Error in validation component will get processed by Processer level On Error Propagate block and the error will be rethrown which will get processed by flow level error handler which will set payload to "Error- main flow". Hence correct answer is Error - main flow
1) Request is received by HTTP listener
2) Try scope gets executed
3) The validator component in the Try scope creates an Error Object because the payload is not null.
4) The On Error Propagate handles the error. The payload is set to "Error - Try scope"
6) "Error - Try scope" is returned to the 'On Error Continue' block. Main flow execution stops. Payload is set to "Error - main flow"
7) "Error - main flow" is returned to the requestor in the body of the HTTP request. HTTP Status Code: 200
-------------------------------------------------------------------------------------------------------------------------------
---- Reference Diagram though not exactly same, conditions are similar. They will help you answer any new question on error handling in real exam:
