

QSA_New_V4퍼펙트덤프데모다운로드, QSA_New_V4 완벽한덤프문제

IT국제공인자격증 PCI SSC QSA_New_V4 시험대비덤프를 제공하는 전문적인 사이트로서 회원님의 개인정보를 철저하게 보호해드리고 페이팔을 통한 결제라 안전한 결제를 진행할수 있습니다. PCI SSC QSA_New_V4 덤프외에 다른 인증시험덤프에 관심이 있으신 분은 온라인 서비스를 클릭하여 문의해주세요.

PCI SSC QSA_New_V4 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.
주제 2	<ul style="list-style-type: none">Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.
주제 3	<ul style="list-style-type: none">PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.

주제 4	<ul style="list-style-type: none"> PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.
주제 5	<ul style="list-style-type: none"> PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.

QSA_New_V4완벽한 덤프문제 & QSA_New_V4유효한 시험덤프

Fast2test 안에는 아주 거대한 IT업계엘리트들로 이루어진 그룹이 있습니다. 그들은 모두 관련업계에서 권위가 있는 전문가들이고 자기만의 지식과 지금까지의 경험으로 최고의 IT인증관련자료를 만들어냅니다. Fast2test의 QSA_New_V4문제와 답은 정확도가 아주 높으며 한번에 패스할 수 있는 100%로의 보장도를 자랑하며 그리고 또 일년무료 업데이트를 제공합니다.

최신 PCI Qualified Professionals QSA_New_V4 무료샘플문제 (Q43-Q48):

질문 # 43

An entity accepts e-commerce payment card transactions and stores account data in a database. The database server and the web server are both accessible from the Internet. The database server and the web server are on separate physical servers. What is required for the entity to meet PCI DSS requirements?

- A. The web server and the database server should be installed on the same physical server.
- B. The database server should be relocated so that it is not accessible from untrusted networks.**
- C. The database server should be moved to a separate segment from the web server to allow for more concurrent connections.
- D. The web server should be moved into the internal network.

정답: B

설명:

Requirement 1.3.7 and Requirement 3.3.1 emphasise that databases storing cardholder data must not be directly accessible from the Internet or untrusted networks. The database must be behind firewalls and accessible only via controlled, authorised connections.

* Option A:#Incorrect. Combining servers may violate the one-function-per-server rule (Requirement 2.2.1).

* Option B:#Correct. The database must be protected from direct public access.

* Option C:#Incorrect. Web servers often reside in the DMZ; moving them internally could increase risk.

* Option D:#Incorrect. Network performance is not a PCI DSS concern - security isolation is.

References:

PCI DSS v4.0.1 - Requirement 1.3.7, Requirement 3.3.1, and Requirement 2.2.1.

질문 # 44

Which statement is true regarding the PCI DSS Report on Compliance (ROC)?

- A. The assessor may use either their own template or the ROC Reporting Template provided by PCI SSC.
- B. The ROC Reporting Template provided by PCI SSC is only required for service provider assessments.
- C. The assessor must create their own ROC template for each assessment report.
- D. The ROC Reporting Template and instructions provided by PCI SSC should be used for all ROCs.**

정답: D

설명:

Mandatory ROC Template

* PCI DSS v4.0 mandates the use of the PCI SSC-provided ROC Template for all Reports on Compliance.

* This ensures standardization, completeness, and accuracy in documenting compliance assessments.

Sections of the ROC Template

* The ROC includes mandatory sections:

* Assessment Overview: General details, scope validation, and assessment findings.

* Findings and Observations: Detailed compliance status per requirement.

Prohibited Practices

* Assessors cannot use self-created ROC templates. Deviation from the PCI SSC-approved template may result in rejection of the report.

Key Changes in v4.0

* Enhanced focus on the integrity of reporting and inclusion of specific findings to ensure alignment with PCI DSS objectives.

* Added support for the customized approach within the ROC structure.

질문 # 45

Which of the following parties is responsible for completion of the Controls Matrix for the Customized Approach?

- A. Either a QSA, AQSA, or PCIP.
- B. Entity being assessed.
- C. Card brands or acquirer.
- D. Only a Qualified Security Assessor (QSA).

정답: B

설명:

Under Appendix D - Customized Approach, it is clearly stated that the entity is responsible for completing the Controls Matrix and the Targeted Risk Analysis (TRA). The assessor may assist in completion, but accountability for content lies with the entity.

* Option A: Incorrect. QSAs may assist but are not solely responsible.

* Option B: Incorrect. This overstates who is responsible; only the entity is ultimately accountable.

* Option C: Correct. The entity being assessed is responsible for completing the Controls Matrix and TRA.

* Option D: Incorrect. Card brands or acquirers are not involved in document creation.

질문 # 46

A "Partial Assessment" is a new assessment result. What is a "Partial Assessment"?

- A. A ROC that has been completed after using an SAQ to determine which requirements should be tested, as per FAQ 1331.
- B. An interim result before the final ROC has been completed.
- C. A term used by payment brands and acquirers to describe entities that have multiple payment channels, with each channel having its own assessment.
- D. An assessment with at least one requirement marked as "Not Tested".

정답: D

설명:

According to Section 12.2.3.3 of PCI DSS v4.0.1, a Partial Assessment is defined as a result where at least one PCI DSS requirement is marked as "Not Tested." This is typically seen during gap assessments or pre-validation efforts, not official compliance validation.

* Option A: Incorrect. SAQs are self-assessments; Partial Assessment is a different concept.

* Option B: Incorrect. Interim drafts are not labeled as "Partial".

* Option C: Incorrect. That is a misinterpretation of segmentation by payment channel.

* Option D: Correct. "Not Tested" = Partial Assessment.

질문 # 47

What does the PCI PTS standard cover?

- A. Secure coding practices for commercial payment applications.
- B. End-to-end encryption solutions for transmission of account data.
- C. Development of strong cryptographic algorithms.
- D. Point-of-interaction devices used to protect account data.

정답: D

설명:

The PCI PIN Transaction Security (PTS) standard applies to point-of-interaction (POI) hardware devices, such as PIN entry devices and POS terminals. It ensures these devices securely capture and process account data, particularly for PIN-based transactions.

* Option A:#Correct. PCI PTS focuses on hardware devices that process PIN or card data.

* Option B:#Incorrect. This is covered under the Secure Software Standard (part of the Software Security Framework).

* Option C:#Incorrect. Algorithm development is outside PCI SSC's scope.

* Option D:#Incorrect. End-to-end encryption is covered in other guidance (e.g., P2PE), not PTS.
