PSM-III教育資料 & PSM-IIIテスト難易度

PDFバージョン、ソフトバージョン、APPバージョンの3つのバージョンのPSM-III練習問題を選択できます。PSM-IIIトレーニング資料のPDFバージョンは読みやすく、覚えやすく、印刷リクエストをサポートしているため、紙で印刷して練習することができます。PSM-III実践教材のソフトウェアバージョンは、シミュレーションテストシステムをサポートし、セットアップの時間を与えることには制限がありません。このバージョンはWindowsシステムユーザーのみをサポートすることに注意してください。PSM-III試験問題のオンライン版は、あらゆる種類の機器やデジタルデバイスに適しています。モバイルデータなしで練習することを条件に、オフラインでの運動をサポートします。

Scrum Professional Scrum Master level III (PSM III) 認定 PSM-III 試験問題 (Q21-Q26):

質問 # 21

What is meant by a team or organization practicing 'zombie' or 'mechanical' Scrum?

正解:

解説:

Practicing 'zombie' or 'mechanical' Scrum refers to an approach where teams and organizations follow the rules and events of Scrum in a superficial manner, merely going through the motions, without embracing the underlying purpose, values, and principles of the framework.

In mechanical Scrum, teams conduct the required events, maintain the prescribed artifacts, and use Scrum terminology, but do so without focusing on value, learning, or outcomes. Scrum events become routine meetings rather than opportunities for inspection and adaptation. The Sprint Goal may exist on paper, but it does not meaningfully guide decisions. As a result, Scrum is reduced to a

checklist of practices rather than a framework for solving complex problems.

This approach contrasts sharply with practicing "Real" Scrum, which is value-driven and goal-oriented.

Real Scrum emphasizes delivering meaningful outcomes for customers and stakeholders, rather than simply completing tasks. Teams focus on achieving the Sprint Goal, maximizing product value, and understanding the impact of their work.

Furthermore, mechanical Scrum often ignores the Scrum Values. Without Courage, teams avoid difficult conversations;

without Openness, problems are hidden; without Respect, collaboration suffers; without Commitment and Focus, teams optimize for activity rather than outcomes. This leads to stagnation and missed opportunities for improvement.

In contrast, Real Scrum recognizes that Scrum is a framework, not a rigid methodology. It intentionally leaves room for teams and organizations to discover and adopt additional practices that support empiricism, continuous improvement, and stakeholder satisfaction. These practices are chosen to reinforce Scrum's core values, not to replace them.

質問 # 22

A Scrum Team has been working on a product for nine Sprints. A new Product Owner comes in, understanding he is accountable for the Product Backlog. However, he is unsure about his responsibilities.

Which two activities are part of the Product Owner role according to Scrum?

正解:

解説:

According to Scrum, the Product Owner is accountable for maximizing the value of the product and for effective Product Backlog management. Two key activities that are explicitly part of this role are:

1. Ordering the Product Backlog to Maximize Value

The Product Owner is responsible for ordering the Product Backlog so that the most valuable work is done first. This ordering reflects:

- * Business and customer value,

- * Risk and uncertainty,

- * Strategic goals and learning from previous Sprints.

Through this activity, the Product Owner ensures that the Scrum Team is always working on what matters most.

2. Ensuring Product Backlog Items Are Transparent, Clear, and Understood The Product Owner ensures that Product Backlog Items are:

- * Clearly expressed,

- * Transparent to the Scrum Team and stakeholders,

- * Understood well enough for Developers to select them during Sprint Planning.

This does not mean writing detailed requirements alone, but collaborating so that shared understanding exists.

質問 # 23

Mid-sprint a development team forecasts it will not be able to deliver all the planned backlog items. They are worried and ask for your advice as Scrum Master. What will you tell them?

正解:

解説:

When a Development Team realizes mid-Sprint that it may not be able to deliver all planned Sprint Backlog Items, this situation should be handled through empiricism, not concern or blame. As a Scrum Master, I would reassure the team and guide them back to Scrum principles.

First, I would remind the team that in Scrum they do not commit to delivering all Sprint Backlog Items.

Instead, the Scrum Team commits to doing their very best to achieve the Sprint Goal. Discovering additional work, complexity, or unknowns during the Sprint is expected, especially in complex product development. The Sprint Backlog is a forecast, not a fixed contract.

Second, I would help the team assess the impact of what they have discovered. If the newly discovered work is minor and the Sprint Goal is still within reach, the team can continue as planned while adapting the Sprint Backlog as needed. This reflects normal inspection and adaptation during the Sprint.

Third, if the impact is significant and threatens the Sprint Goal, the Development Team should have a focused discussion about it and how the Sprint Goal can still be met. This may involve changing the approach, reducing scope while preserving the Sprint Goal, or identifying alternative ways to deliver the intended value.

In such cases, the Product Owner should be involved in the conversation. Including the Product Owner increases transparency and enables faster value-based decision-making, such as re-negotiating scope or adjusting priorities while keeping the Sprint Goal intact. This collaboration ensures that adaptations are aligned with product value.

質問 # 24

You are a Scrum Master working with a Scrum Team. The Development Team constantly complain that requirements are not clear enough. The Product Owner claims she is too busy to provide extra clarity. What should you do?

正解:

解説:

This situation represents a breakdown in Product Backlog transparency and collaboration, which directly threatens empiricism and value delivery. As a Scrum Master, my responsibility is not to solve the problem myself, but to enable the Scrum Team and the organization to resolve it.

1. Reframe the Problem: Requirements vs. Product Backlog

First, I would help both parties reframe the issue. In Scrum, we do not work with "requirements" in a traditional, fixed sense. Instead, we work with a Product Backlog that is emergent, ordered, and continuously refined. Lack of clarity in Product Backlog Items means that the backlog is not in a usable state, which is an impediment to the Developers.

2. Make the Impact Transparent

Next, I would facilitate a conversation to make the impact of unclear backlog items transparent:

- * Developers cannot reliably forecast work,
- * Sprint Goals are put at risk,
- * Rework and waste increase,
- * Delivery of value slows down.

This conversation should involve the Product Owner and be grounded in evidence, not blame. The goal is shared understanding of the consequences, not assigning fault.

3. Reinforce Product Owner Accountability

The Scrum Guide is clear that the Product Owner is accountable for maximizing value and for Product Backlog management, which includes ensuring that Product Backlog Items are clear, understood, and ordered. Being "too busy" does not remove this accountability. As a Scrum Master, I would coach the Product Owner to recognize that insufficient availability is itself an organizational impediment.

4. Enable Collaboration, Not Handoffs

At the same time, I would coach the Developers that clarity is often co-created, not simply provided. Scrum encourages close collaboration between Developers and the Product Owner. Techniques such as:

- * Regular Product Backlog refinement,
- * Joint discussions during Sprint Planning,
- * Asking focused questions around the Sprint Goal, can significantly improve shared understanding without relying on detailed upfront specifications.

5. Address Organizational Constraints

If the Product Owner's lack of availability is due to organizational overload or competing responsibilities, this becomes a systemic impediment. In that case, the Scrum Master must raise this issue to the organization and help leadership understand that a Product Owner who is not sufficiently available puts product outcomes at risk.

質問 # 25

In what way does Scrum encourage ethical behaviour, doing "the right thing", in software development?

正解:

解説:

Scrum encourages ethical behaviour in software development by creating a framework that promotes transparency, accountability, quality, and respect for stakeholders, all of which are grounded in the Scrum Values. Rather than prescribing ethical rules, Scrum embeds ethical behaviour into the way work is organized and delivered.

First, Scrum promotes ethics through its focus on delivering valuable, high-quality working products. The Scrum Guide emphasizes delivering usable Increments that meet a shared Definition of Done. By prioritizing quality and value for both the organization and end-users, Scrum discourages practices such as cutting corners, hiding technical debt, or delivering misleading progress, which are ethically questionable.

Second, Scrum strongly supports transparency, a core pillar of empiricism. All significant aspects of the work—such as progress, impediments, risks, and uncertainties—are made visible through artifacts and events.

This transparency encourages honesty about what can and cannot be achieved and prevents unethical behaviour such as misreporting status or concealing problems until it is too late.

Third, Scrum encourages accountability at both individual and team levels. Clear accountabilities for the Product Owner, Developers, and Scrum Master ensure that responsibility is not diffused or avoided. Teams are accountable for delivering value, improving their

way of working, and meeting their commitments. This accountability fosters ethical decision-making and ownership of outcomes. Fourth, Scrum supports ethical behaviour through continuous learning and improvement. Sprint Retrospectives create a structured opportunity to reflect on mistakes, share knowledge, and improve processes and practices. This openness to learning promotes humility, integrity, and a willingness to correct issues rather than ignoring or rationalizing them. Finally, Scrum is explicitly guided by the Scrum Values of Commitment, Courage, Focus, Respect, and Openness, which form its ethical foundation.

- * Commitment encourages teams to do what they say they will do.
- * Courage enables individuals to raise concerns, admit problems, and challenge unethical practices.
- * Focus helps teams concentrate on delivering real value rather than superficial outputs.
- * Respect ensures consideration for colleagues, stakeholders, and end-users.
- * Openness promotes honesty about progress, challenges, and uncertainty.

質問 # 26

.....

世界は急速に変化しており、従業員に対する要件はこれまでになく高くなっています。GoShiken 理想的な仕事を見つけて高収入を得たい場合は、優れた労働能力と深い知識を高めなければなりません。Professional Scrum Master level III (PSM III) 認定に合格すると、夢を実現できます。製品を購入すると、最高の Professional Scrum Master level III (PSM III) 学習教材が提供され、Professional Scrum Master level III (PSM III) 認定の取得に役立ちます。当社 Scrum の製品は PSM-III 高品質であり、当社のサービスは完璧です。
